Fingertip 4.0 Release

Find out what's new with our latest update

We are excited to introduce Fingertip 4.0, a masterpiece in leadership design that brings your strategic vision to life in daily operations.

This release makes managing daily work easier and more accountable from start to finish. It enhances strategic planning, prioritization, and monitoring, helping you achieve results, improve productivity, and eliminate bottlenecks, all in the fastest and most efficient Fingertip yet.

One key leadership element we tackle is yearly strategic planning. Fingertip's new Annual Clock simplifies monitoring yearly progress, helping leaders coordinate efforts, avoid scheduling conflicts, and drive the organization towards long-term goals.

Leaders can now explore patterns and make sense of complex data quickly using the Sunburst visualization. It provides a clear and interactive way to visualize the status and progress of leadership activities in your teams and channels.

We are also introducing a new way to create tasks directly from emails, reducing the need to switch between applications. This saves time and ensures important issues are promptly addressed, even if they are communicated from outside your organization.

Fingertip 4.0 provides a more organized and visually appealing workspace with new Kanban views in Plans and Collections, giving leaders another great way to monitor project status and deadlines. This promotes better collaboration among team members, ensuring projects are completed on time and to the highest standards.

We believe that these enhancements in Fingertip will significantly benefit your leadership processes, making them more efficient, transparent, and aligned with your strategic goals. We look forward to your feedback and are excited to support you in achieving your leadership objectives with Fingertip 4.0.

- Jaakko Pellosniemi

CEO and Founder, Fingertip

Annual clock

Easily visualize an entire year of activity across multiple teams

Annual clock is a powerful tool for strategic planning and operational efficiency. It provides a structured framework for managing time and resources, enhancing coordination, and driving the organization towards its long-term goals.

With the annual clock, you can choose Fingertip collections, plans or Microsoft Planners to be visualized. Load the visual and see their items over the year.

The annual clock also shows the current progress of all the items, helping identify where leadership is required: Bottlenecks, projects behind schedule, and more.

Sunburst

BETA

Illuminate your data: Discover insights with Sunburst

Sunburst

BETA

Illuminate your data: Discover insights with Sunburst

Sunburst

BETA

Illuminate your data: Discover insights with Sunburst

The Sunburst is a tool that provides a clear and interactive way to visualize status and progress hierarchical data. It allows users to easily explore complex data structures, identify patterns, analyze progress, discover bottlenecks and make informed decisions quickly.

With its intuitive design and customization options, even non-technical users can generate insightful visual reports, enhancing communication and collaboration.

This tool transforms data into actionable insights, making it an asset for business analytics, project management, and educational purposes.

Click on the items to drill deeper to the team, collection or plan structure!

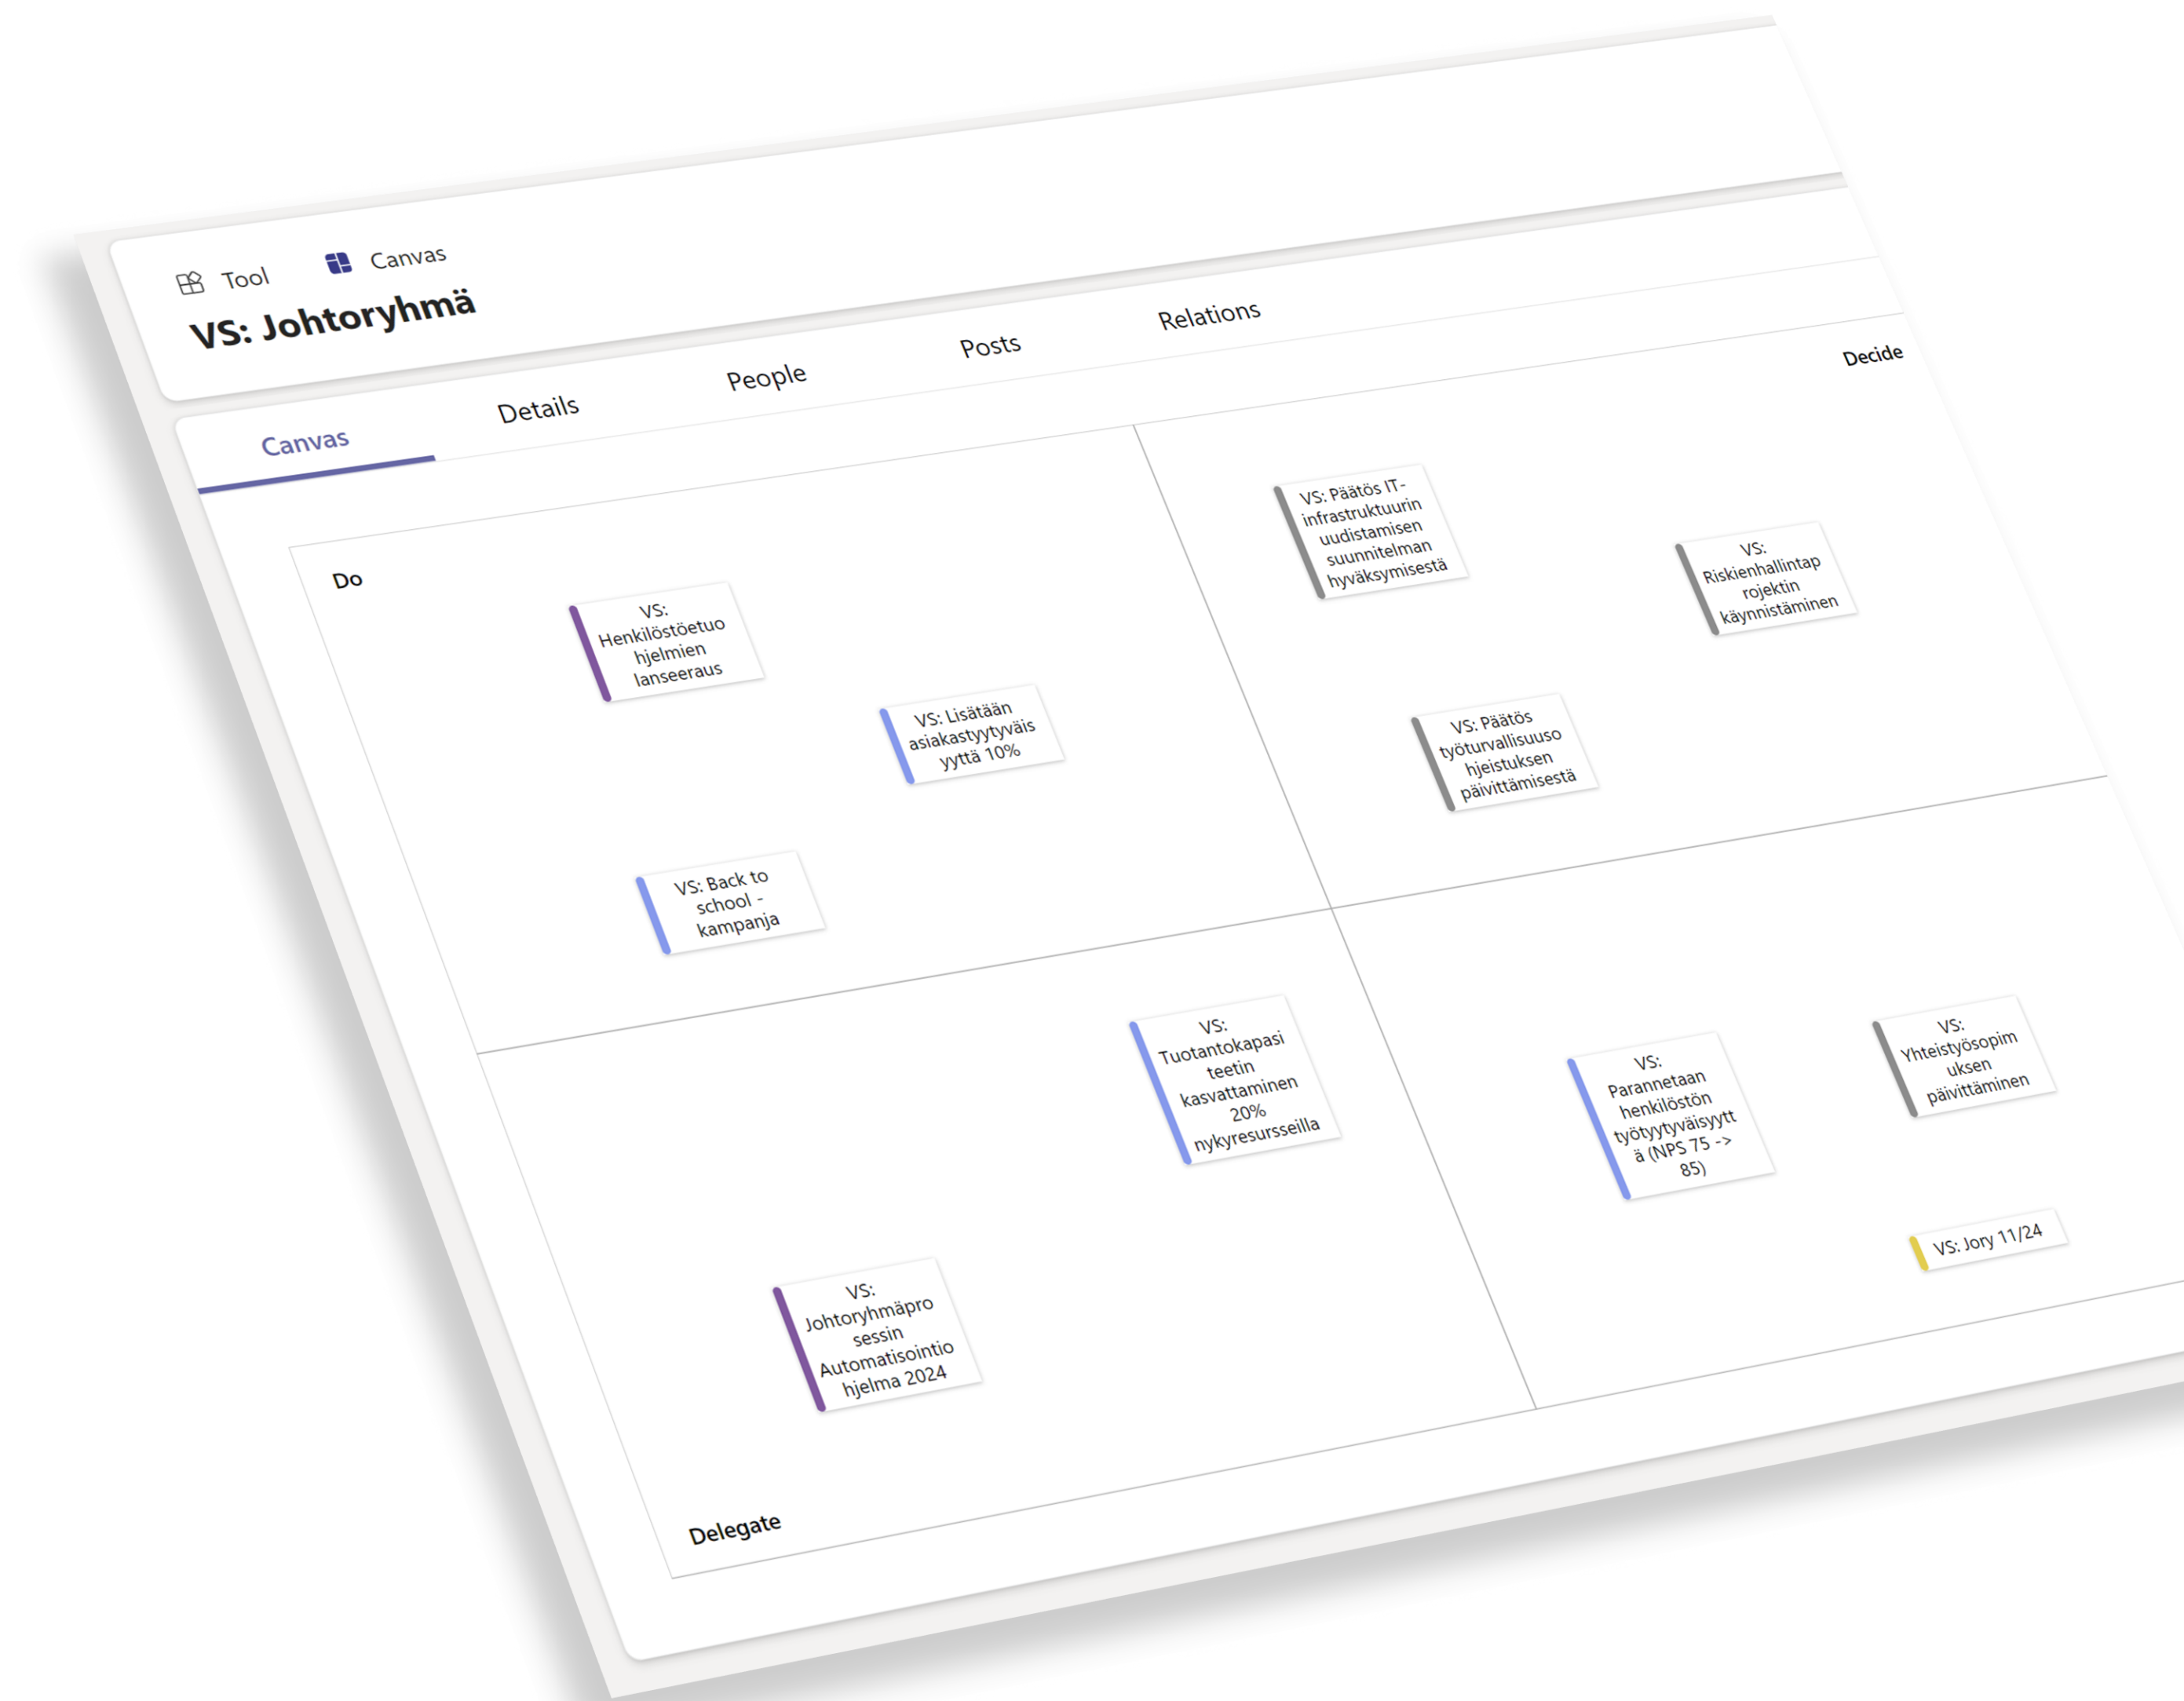

Plan and prioritize Fingertip items on a canvas

We have improved the canvas tool, which is designed for strategic alignment and prioritization.

Our canvas tool creates a quadrant, which allows the categorization of items based on two qualities. You can add any existing Fingertip activators to the canvas and move them around for strategic insights.

You can also brainstorm by creating new activators or add notes on a title level. These notes can even be converted to activators later, based on the strategic analysis.

The canvas currently supports the Eisenhower matrix for importance and urgency, but more customization will be available later.

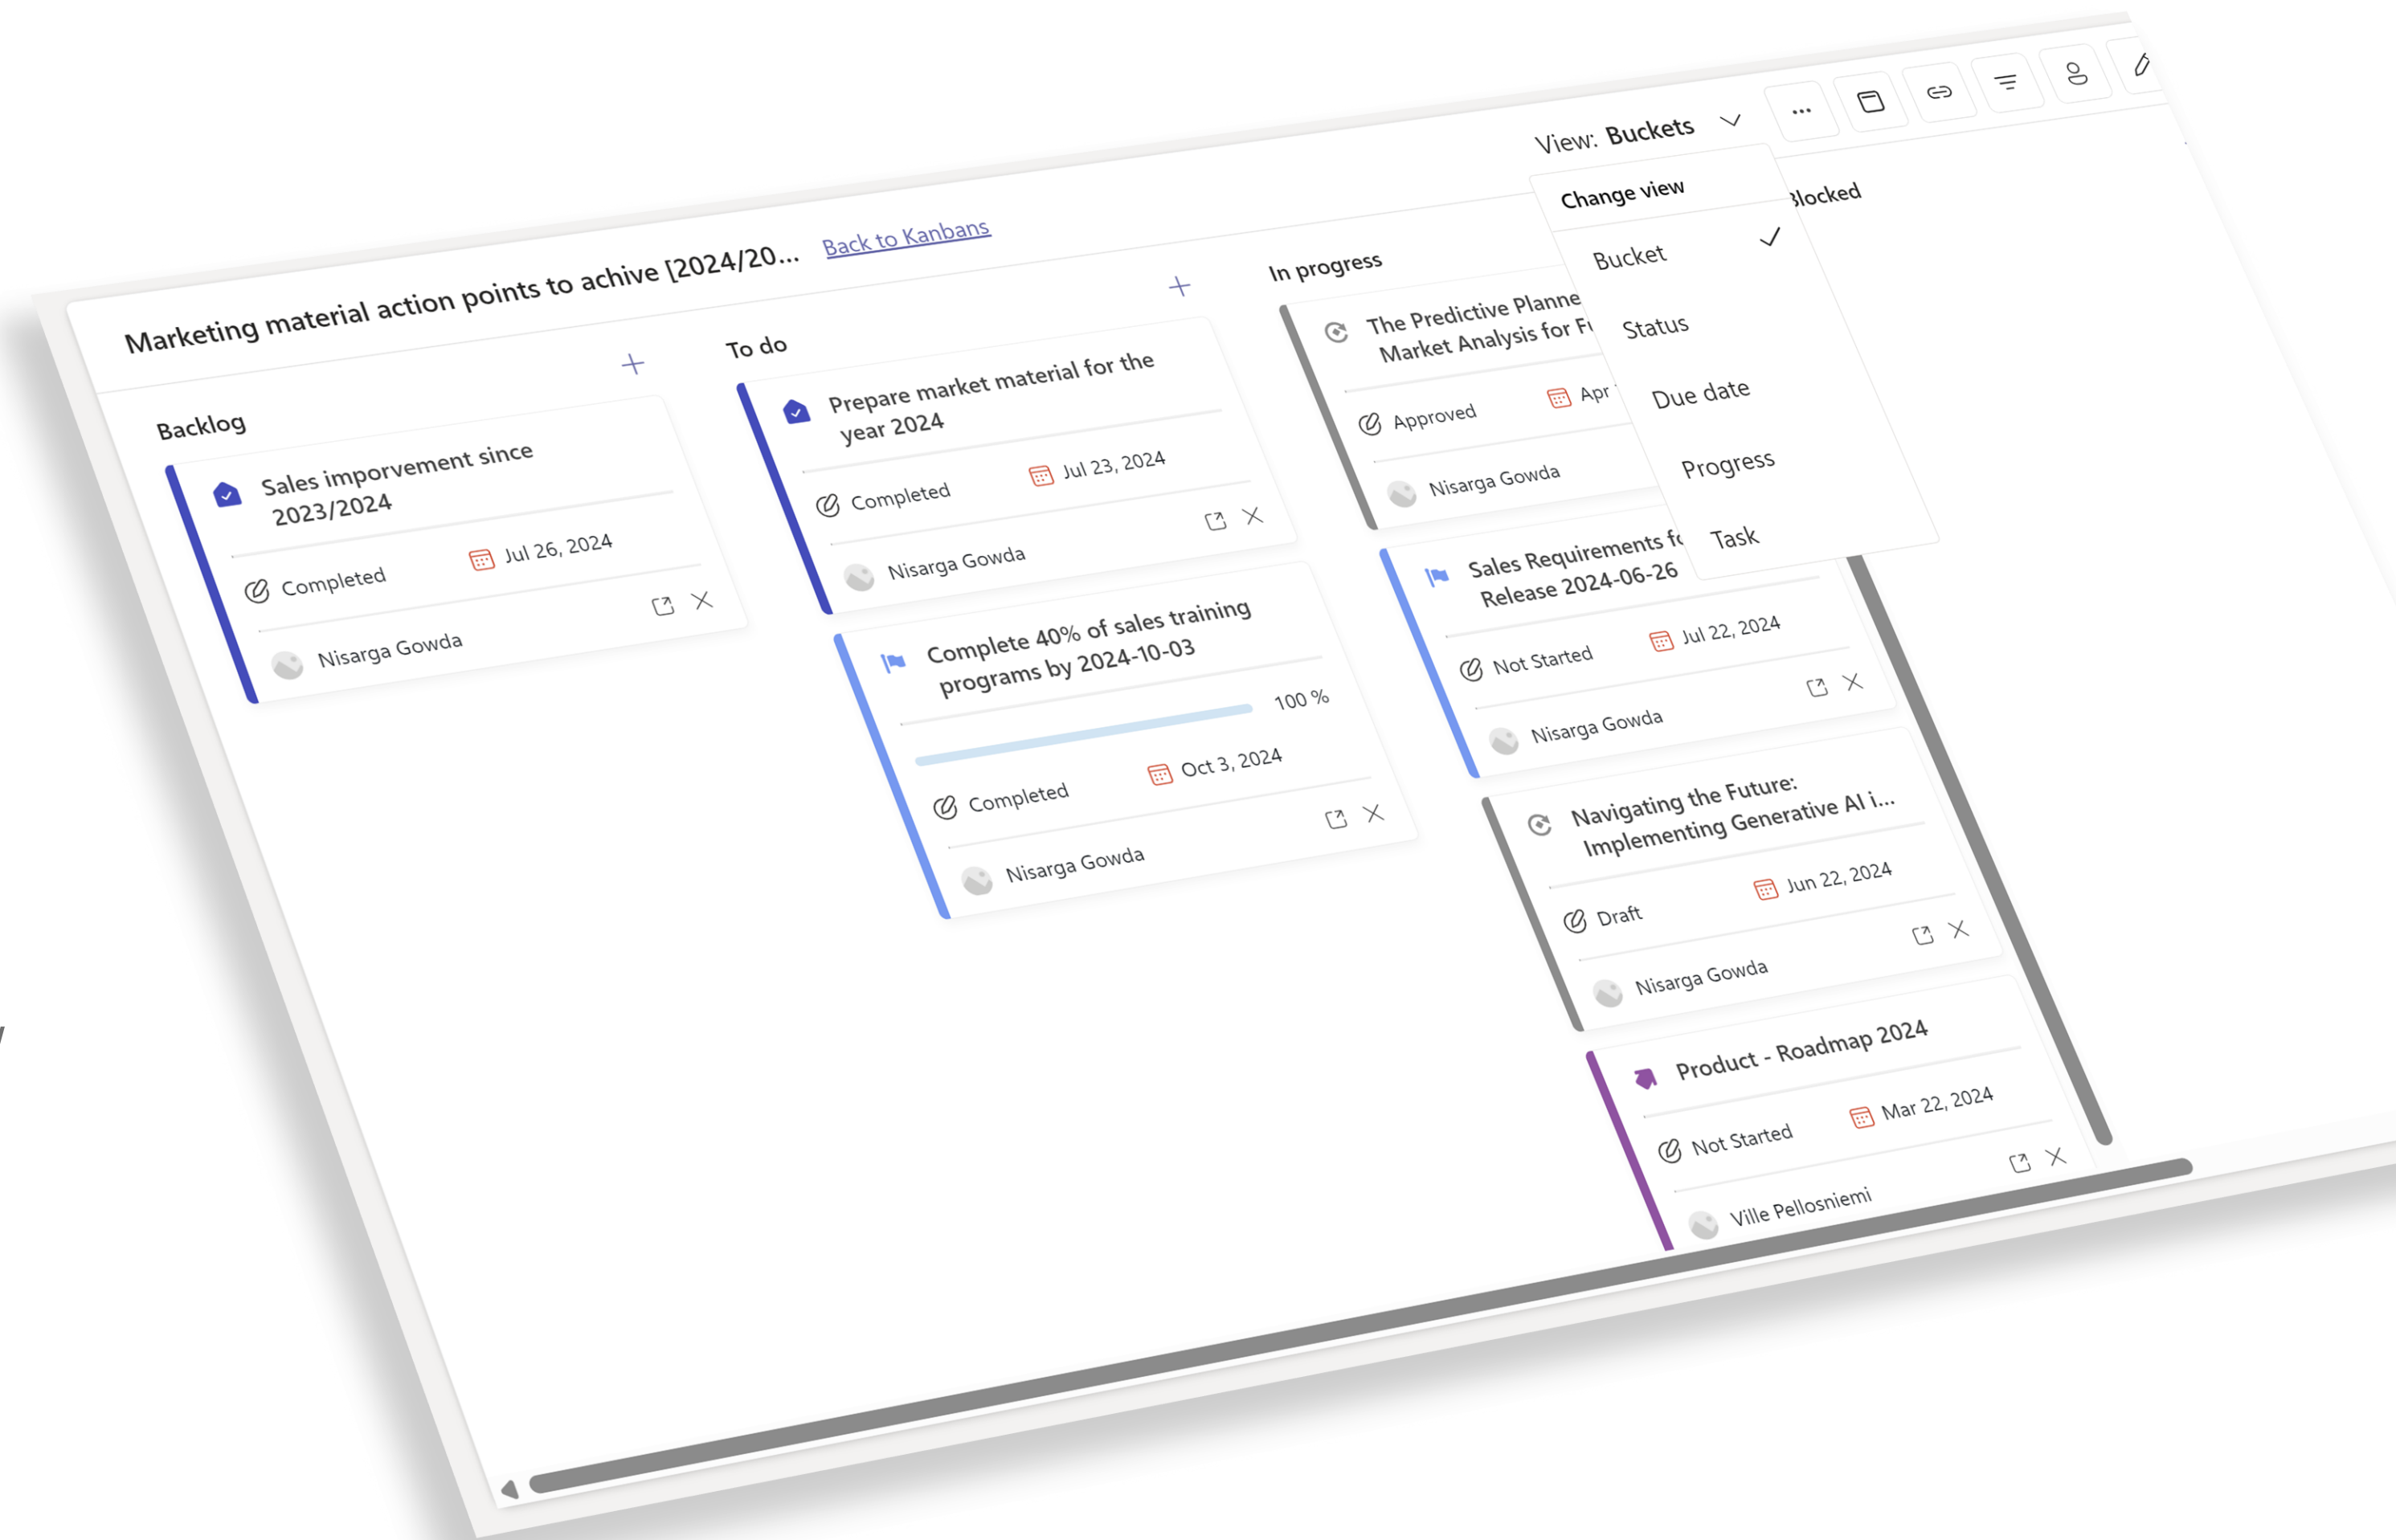

Improved Kanban Board

Streamline your workflow with enhanced visibility and control

The improved Kanban boards add enhancements like due dates, status views, filters, and a refined user interface, which provide significant benefits for end users in planning and prioritization.

These upgrades allow users to easily track project progress and deadlines, ensuring that tasks are completed on time. The status view gives a clear overview of where each task stands, promoting better communication and collaboration among team members. Enhanced filtering options enable users to focus on specific tasks or categories, improving efficiency.

Overall, these improvements lead to a more organized and visually appealing workspace, helping users manage their projects more effectively and boosting overall productivity.

Email bridge to create action from emails

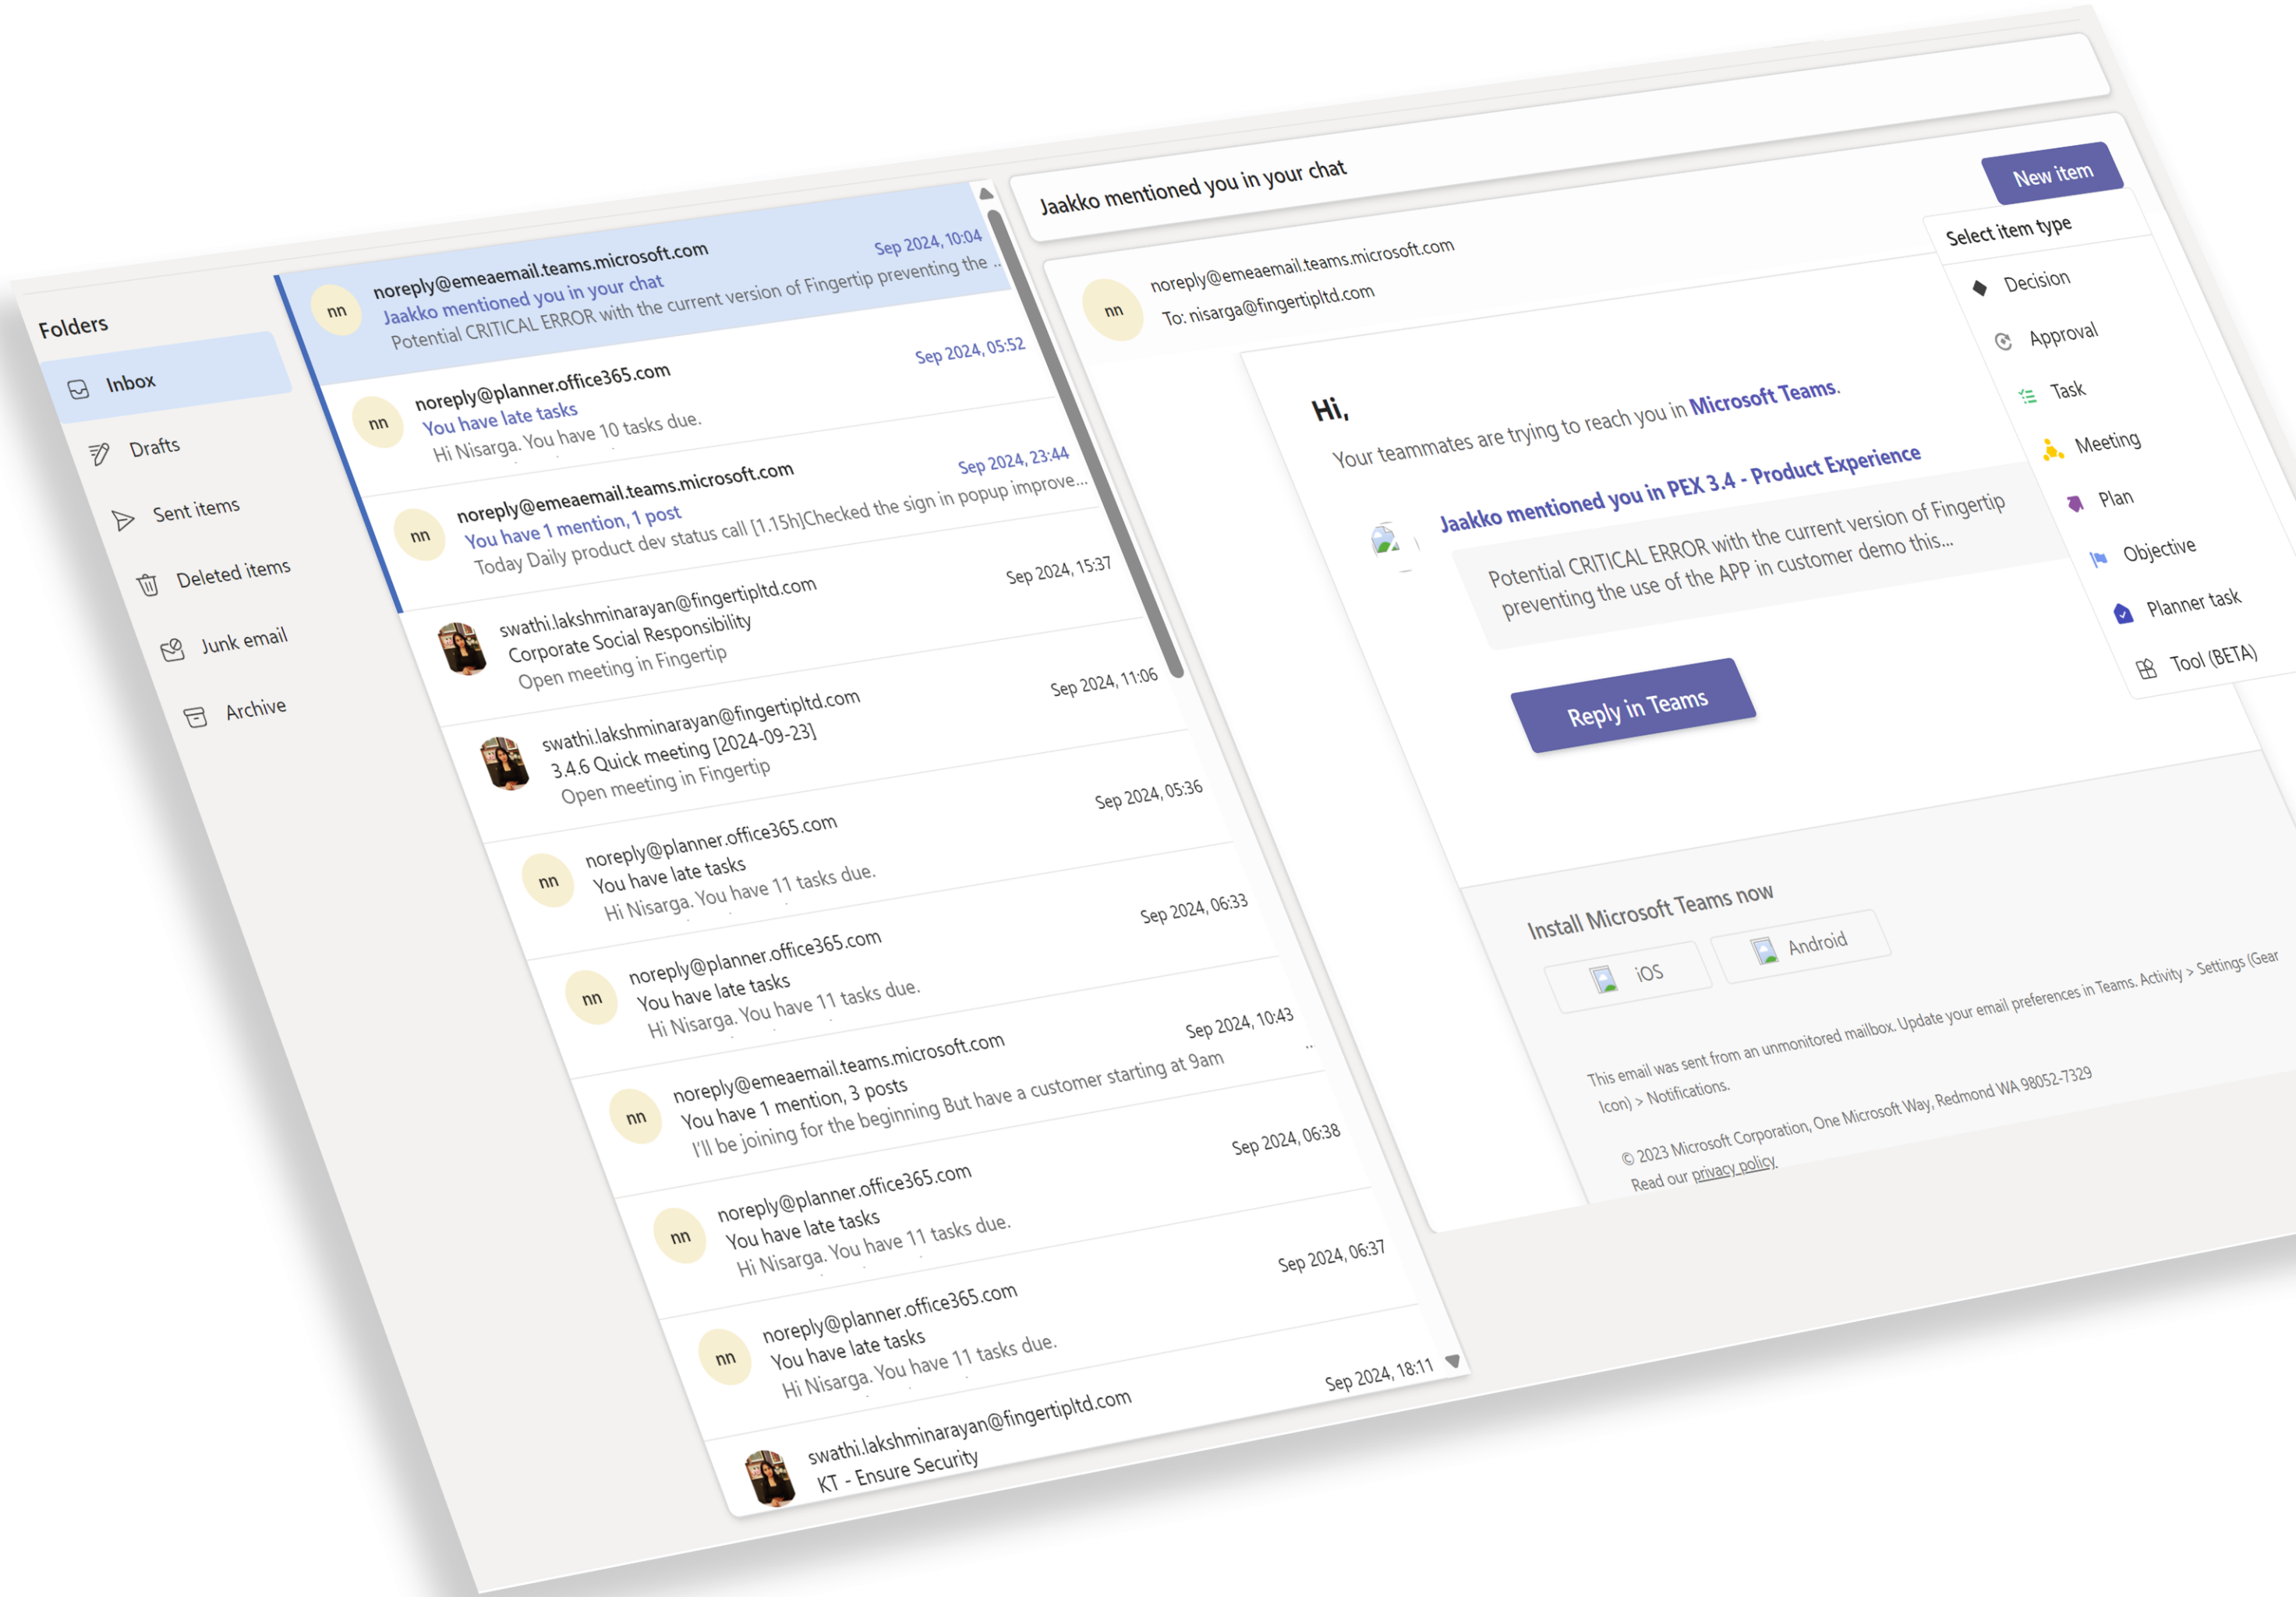

BETA

Seamless access: Transform emails into actions!

Fingertip now supports your Outlook inbox, allowing you to create a new task, plan, meeting, objective or decision from any email you have received.

This streamlines the workflow when putting requests via email to action, saving valuable time. By centralizing these functionalities, users can manage their communications and tasks more efficiently without switching between multiple applications.

This integration reduces friction in daily operations, and ultimately helps users stay organized and focused on their priorities.

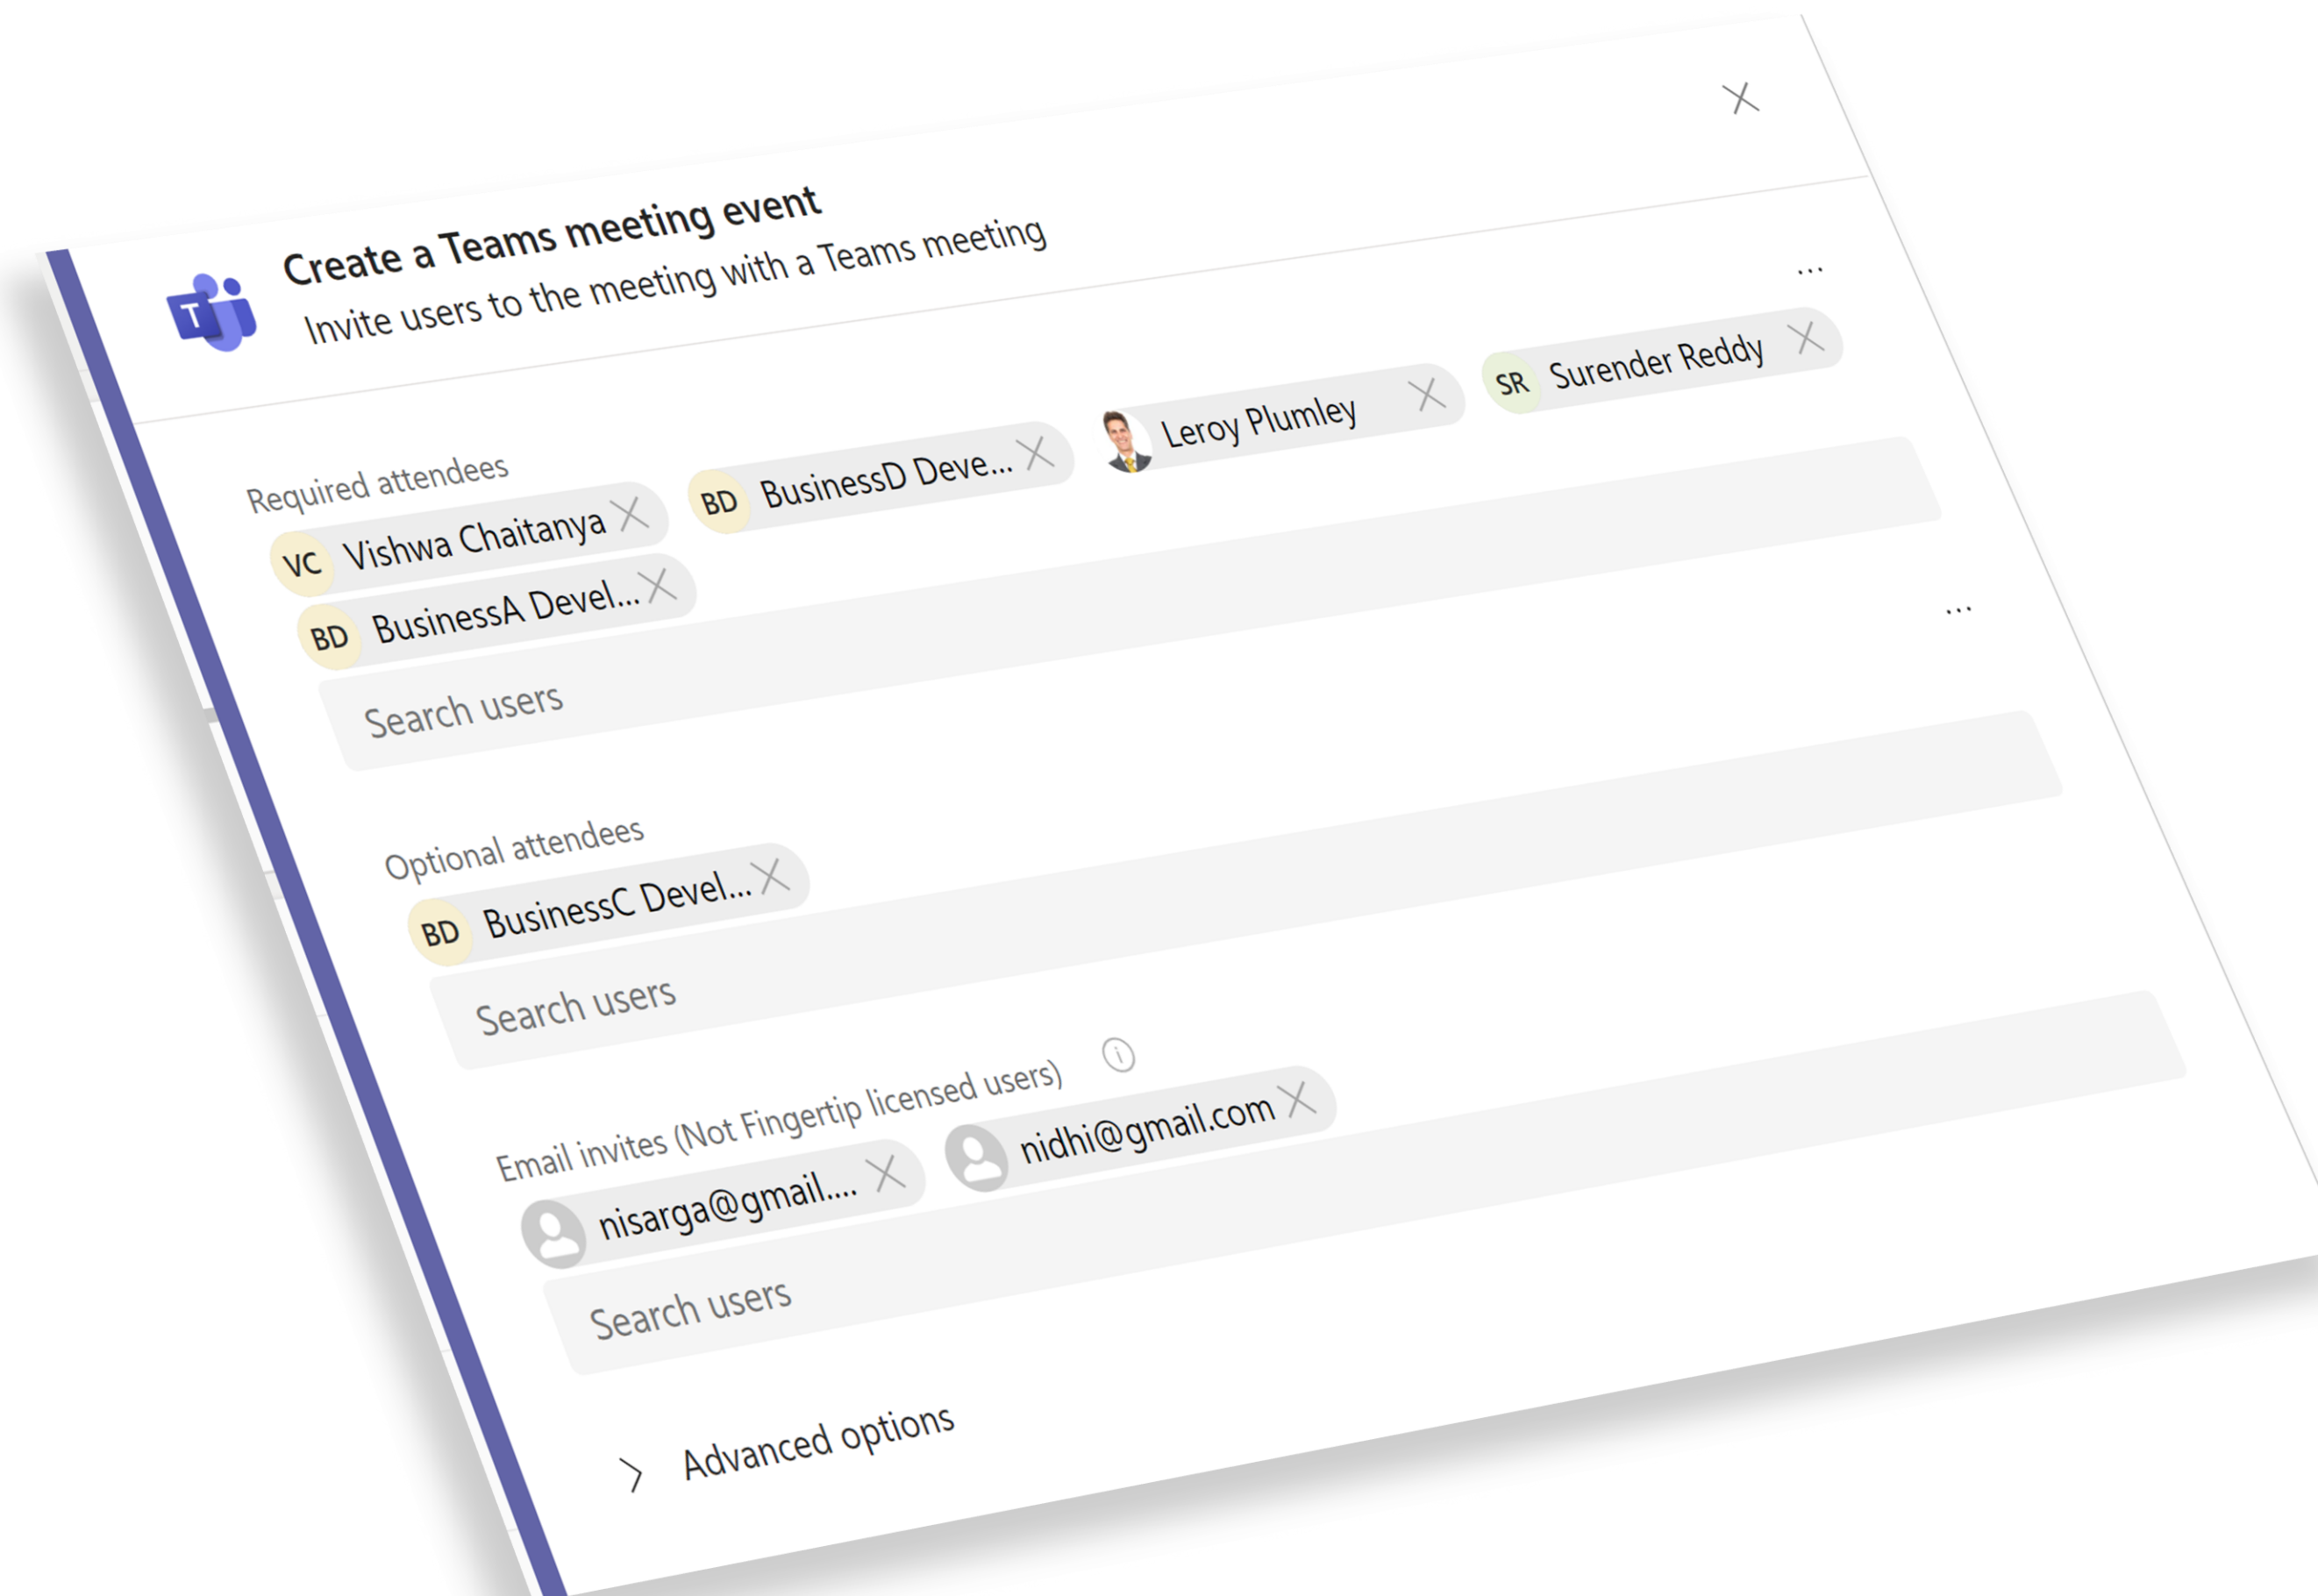

Invite external users to Fingertip meetings

Connect effortlessly: invite anyone to your teams meeting with ease.

In Fingertip 4.0 we are bringing a highly anticipated feature by allowing you to invite any user to a Fingertip meeting using their email address. This feature enables seamless interaction with clients, partners, and remote team members by sending meeting invites directly to their email addresses.

It also simplifies scheduling and ensures everyone can join the meeting, regardless of their organization. This leads to more efficient meetings, better project coordination, and improved overall productivity.

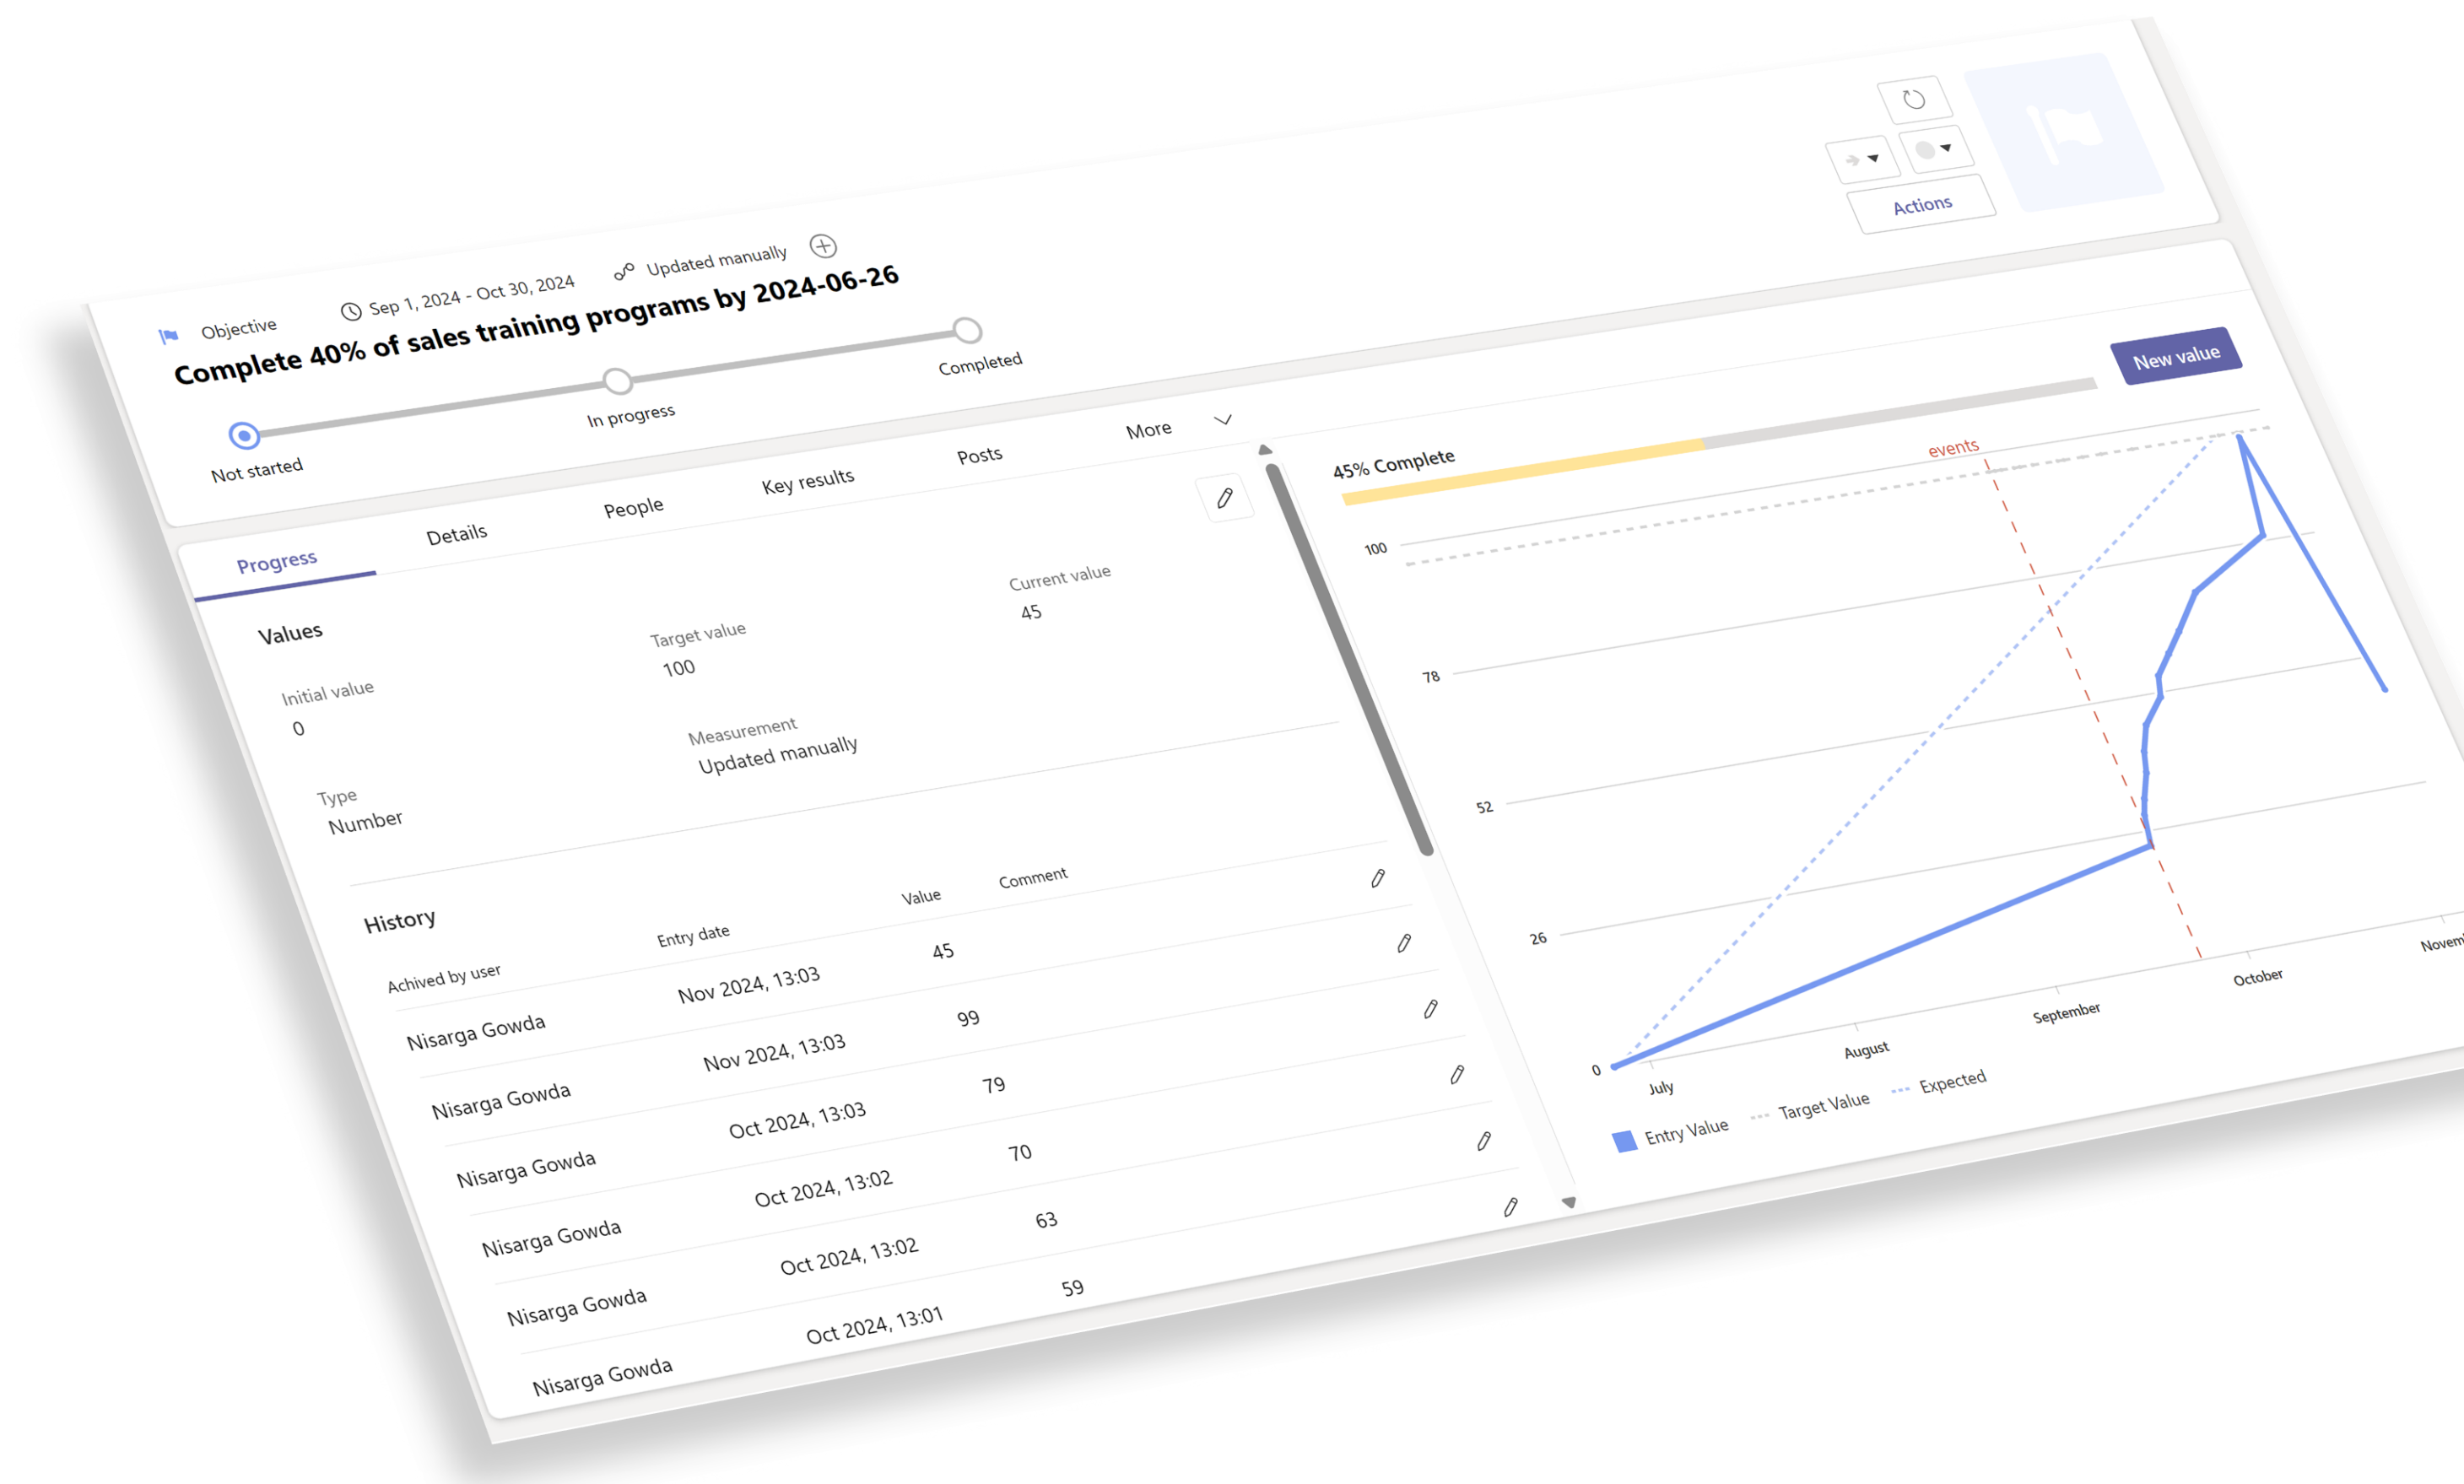

The external attendees will be displayed in the People tab of the item with the “E” (External) role.

Renewed objective details screen

View the objective status in one glance

- The renewed objective/key results details screen significantly enhances the user experience by making crucial information easily accessible and visually engaging.
- The progress history tab has been brought up to the front page, so you can simply track when milestones were achieved and by whom.
- The graph on the right side provides a visual representation of progress, making it easier to identify trends and areas needing attention.
- This streamlined layout reduces cognitive load and ultimately empowers users to stay aligned with their goals more effectively.

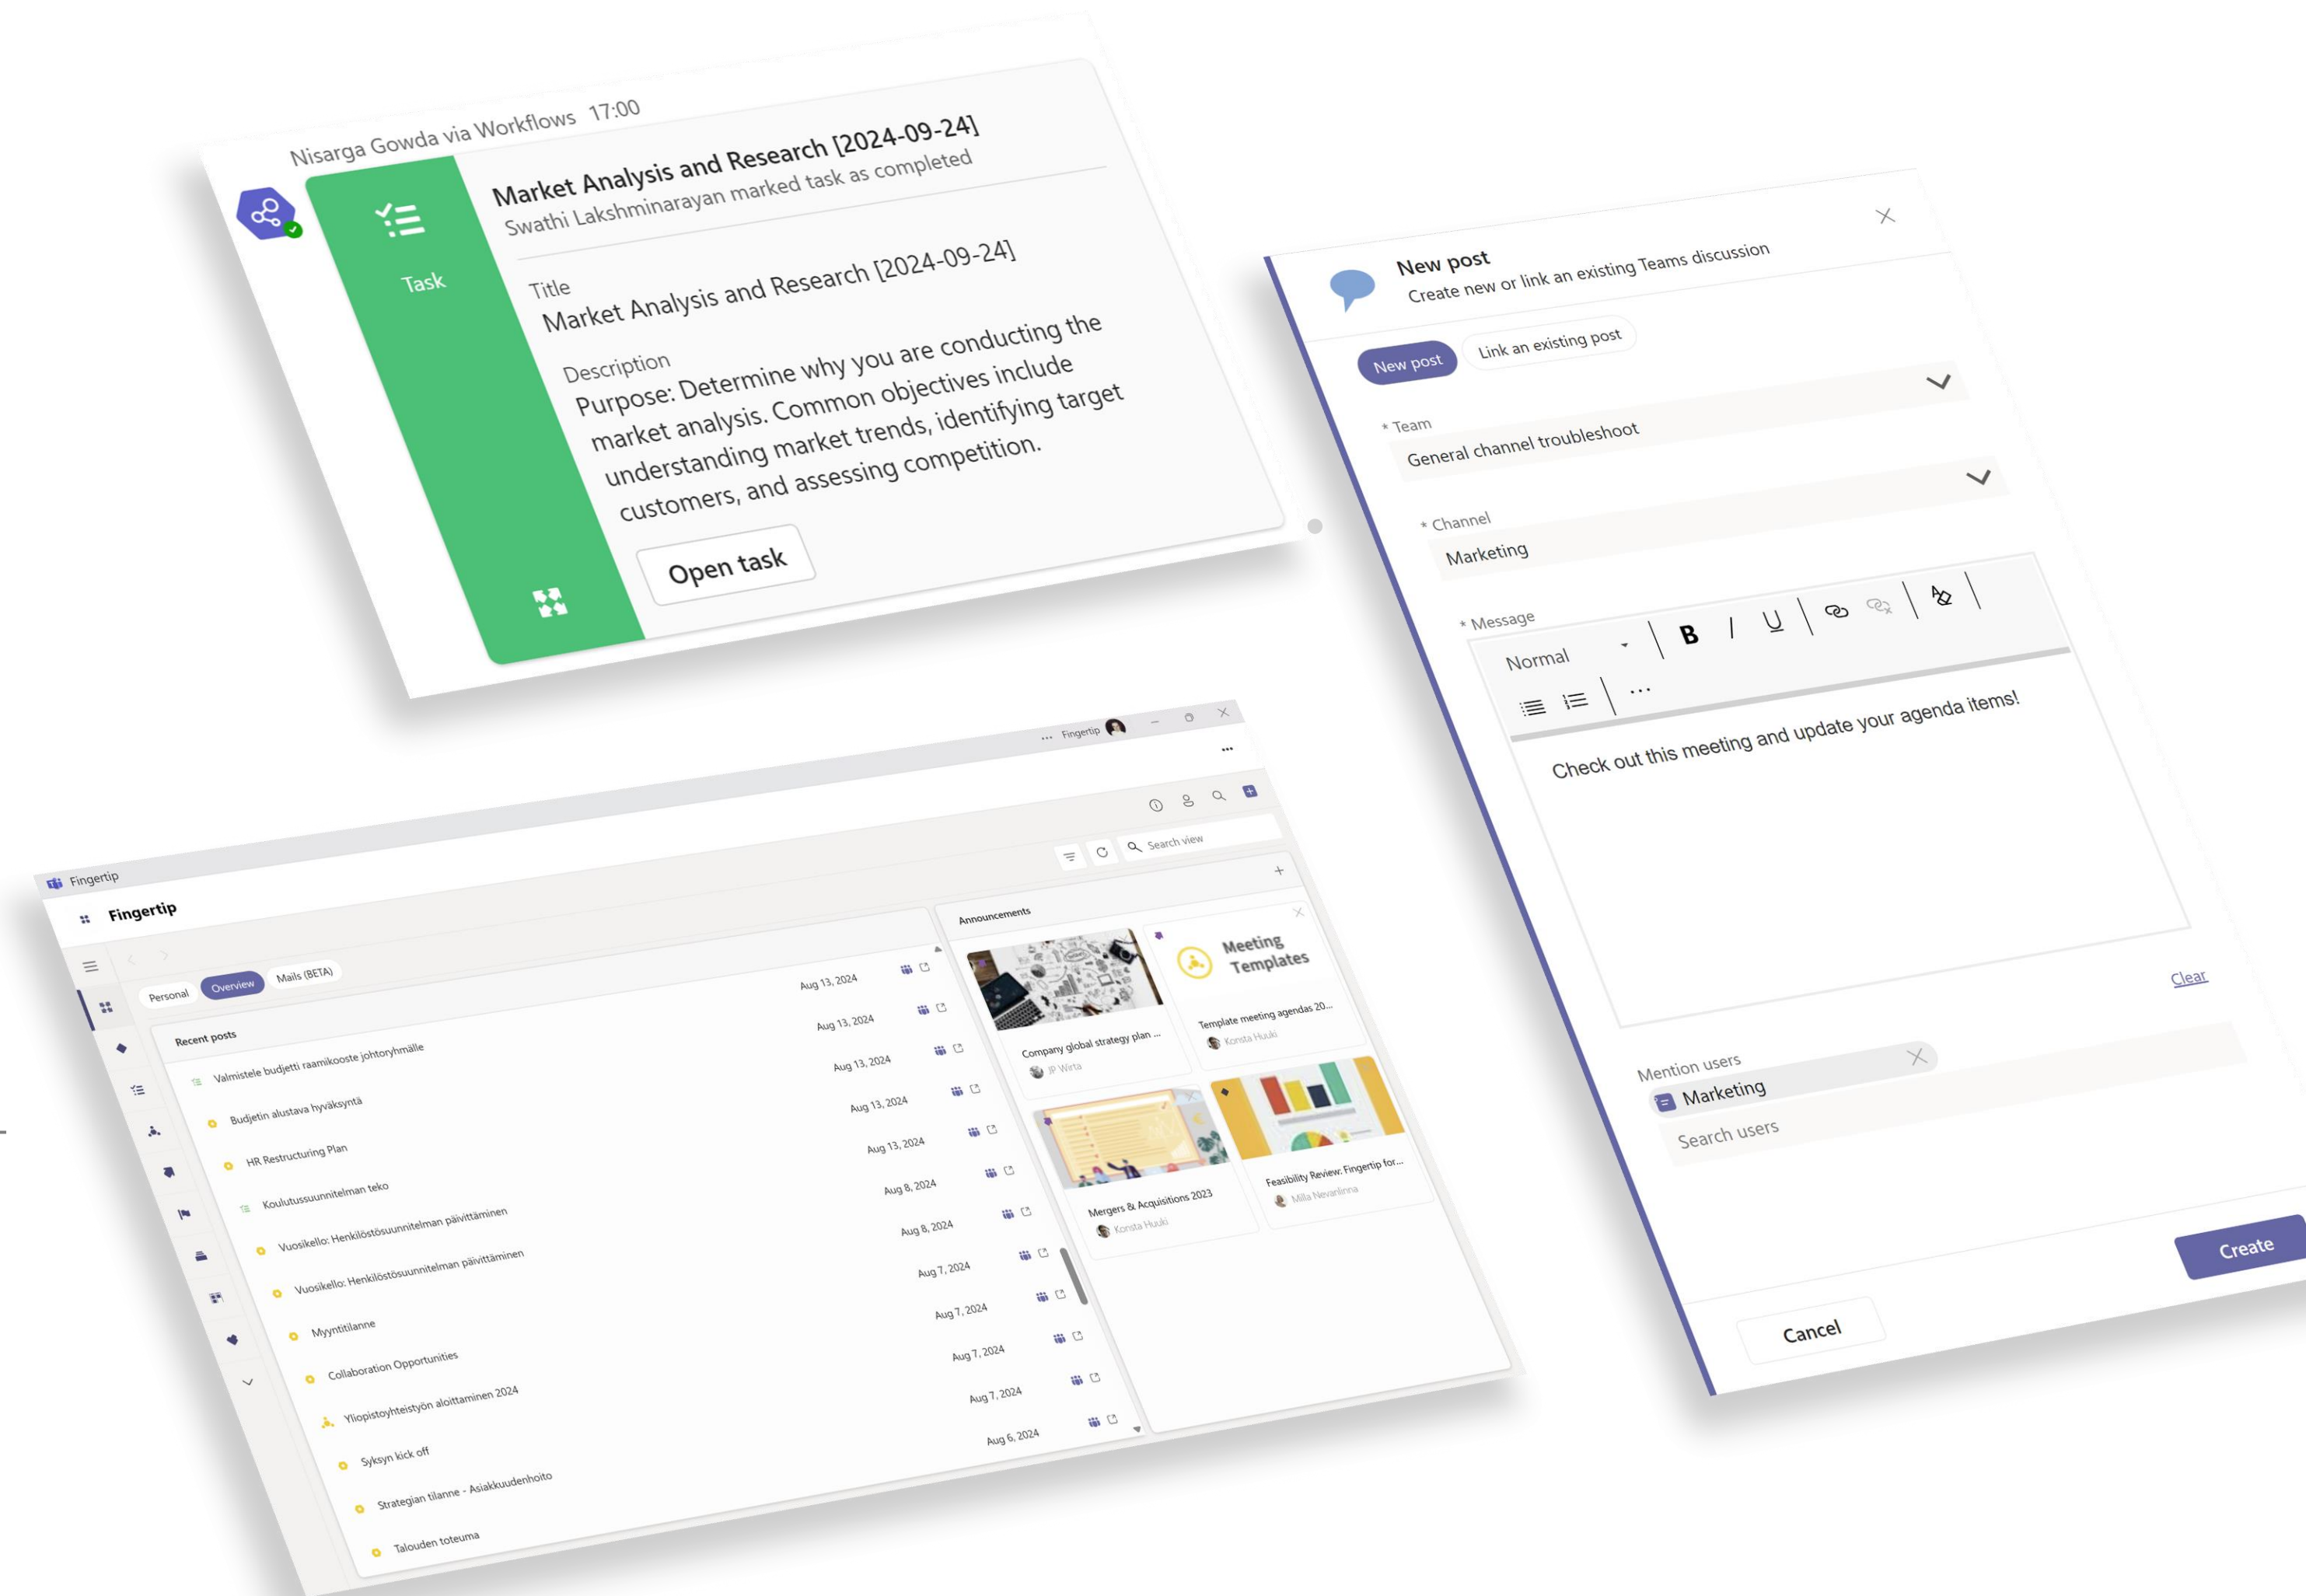

User experience and usefulness improvements

Makes Fingertip usage easier and more fluent!

Fingertip usage is always taking steps forward in terms of getting things done faster and more fluently. In this release, the application has gotten the following improvements in user experience:

- Notification of completed task sent to task assigner
- Improved performance and load time of screens
- Possibility to mention a team or channel in a new channel post (+ rich text field to format the post body)
- Improved “Action points” tab functionality in meetings
- Many other minor user experience improvements and bug fixes
