# Fingertip 4.2 – Highlights

Our 4.2 release aims to improve Fingertip’s usefulness with performance and feature improvements. We are making the app more accessible with better navigation, remodeled item views and shorter loading times.

Here are some key features:

- New universal breadcrumb **navigation**
- Moved the tabs of an item to a more natural place in header
- Reduced loading times by approximately **30%**
- New user experience for **annual clock** ring selection
- Improved objective logic with automatic **status** updates based on **entered values**, and removing redundant details

Other preview features

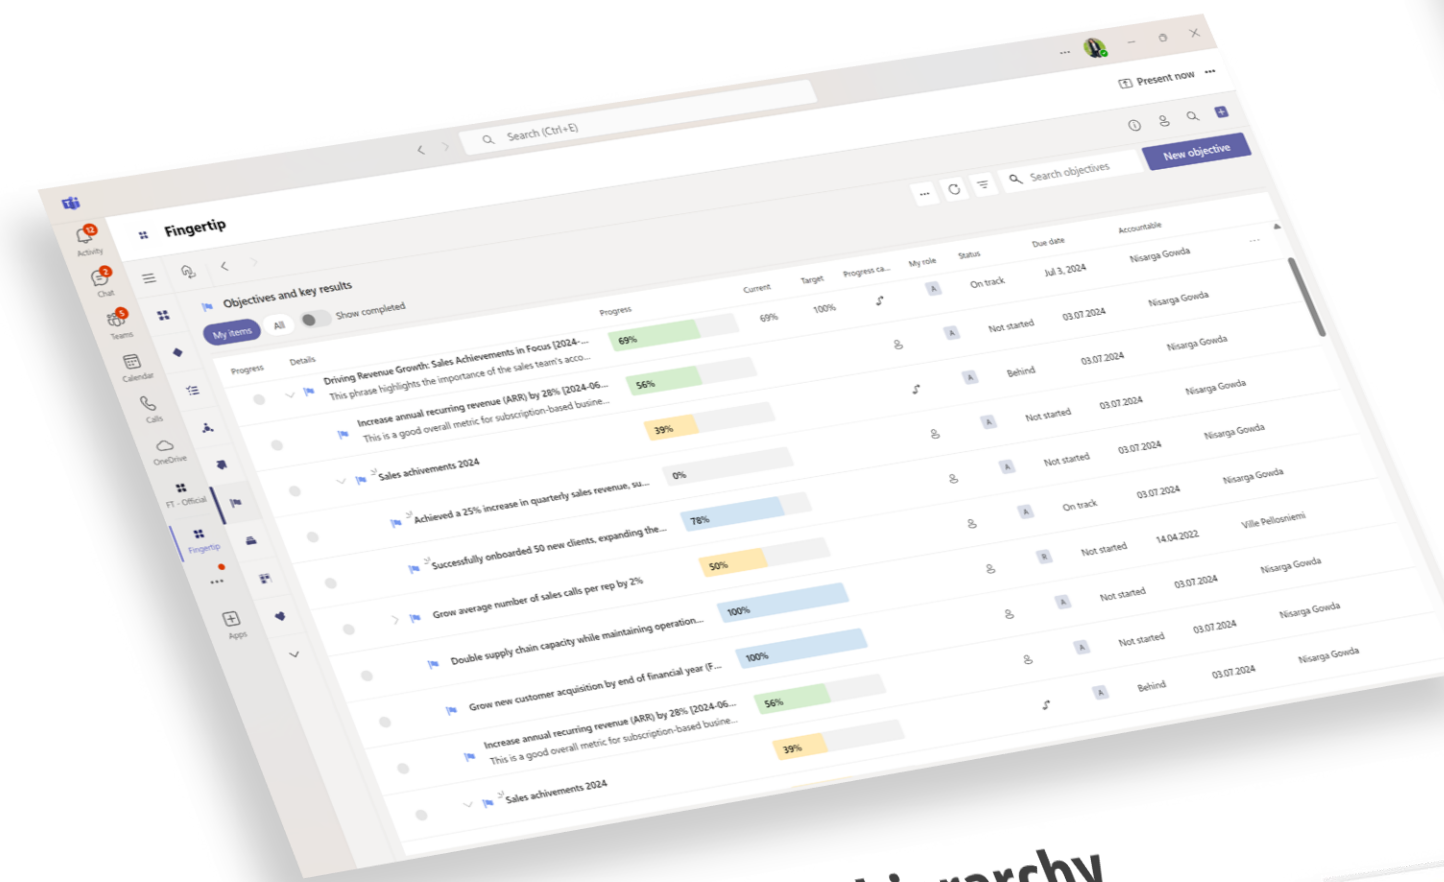

- Sunburst visualization
- Canvas apps for prioritization
- Inline activator creation

IMPROVED	<ul style="list-style-type: none"><li>• Universal navigation between screens and folders</li><li>• Improved initial load time</li><li>• Renewed item details screen layouts</li><li>• Improved loading performance</li></ul>			<ul style="list-style-type: none"><li>• Improved clarity by merging "Objective type" and "Measurement" options to make objective progress calculation more understandable</li></ul>		<ul style="list-style-type: none"><li>• The "Update in Calendar" button is now enabled after adding a new user during the invite phase.</li></ul>			
FIXED	<ul style="list-style-type: none"><li>• Fixed an empty state image bug visible in almost all areas of the app</li></ul>	<ul style="list-style-type: none"><li>• Fixed a bug with the refresh icon in a rejected approval.</li></ul>	<ul style="list-style-type: none"><li>• Fixed an issue with team and bucket being empty in the new planner task sidebar.</li></ul>	<ul style="list-style-type: none"><li>• Fixed issues where objective progress was not updated successfully by tasks and other item types status</li></ul>	<ul style="list-style-type: none"><li>• Fixed a bug with moving items in a plan</li><li>• Fixed a bug that caused copied plan’s order to break, and folder items disappear</li></ul>		<ul style="list-style-type: none"><li>• Fixed a bug that caused items disappear from collections in special cases</li></ul>		

# Fingertip 4.2 Release

Find out what's new with our latest update

We are thrilled to introduce Fingertip 4.2 - our latest release designed to elevate your leadership experience and streamline your daily operations. This update brings a host of performance and feature improvements, making Fingertip more accessible, efficient, and user-friendly than ever before.

The new universal breadcrumb navigation allows users to navigate effortlessly through the app, ensuring they always know where they are and can easily backtrack to previous screens.

Additionally, we have moved the tabs of an item to a more intuitive location in the header, making it easier to access and manage all the related information, like people, tasks and discussions.

We have revamped the annual clock ring selection, providing a new user experience that makes yearly planning and tracking more intuitive and visually appealing.

Our enhanced objective logic now includes automatic status updates based on entered values, removing redundant details and providing a clearer view of progress.

We have also achieved a significant reduction in loading times, which will improve the application's performance and stability.

Furthermore, we have addressed numerous bugs to ensure a smoother and more reliable user experience.

We are excited to present Fingertip 4.2 to you and hope you are as eager to explore it as we are to share it! As always, let us know if there is anything you wish to see in Fingertip in the future!

- Jaakko Pellosniemi

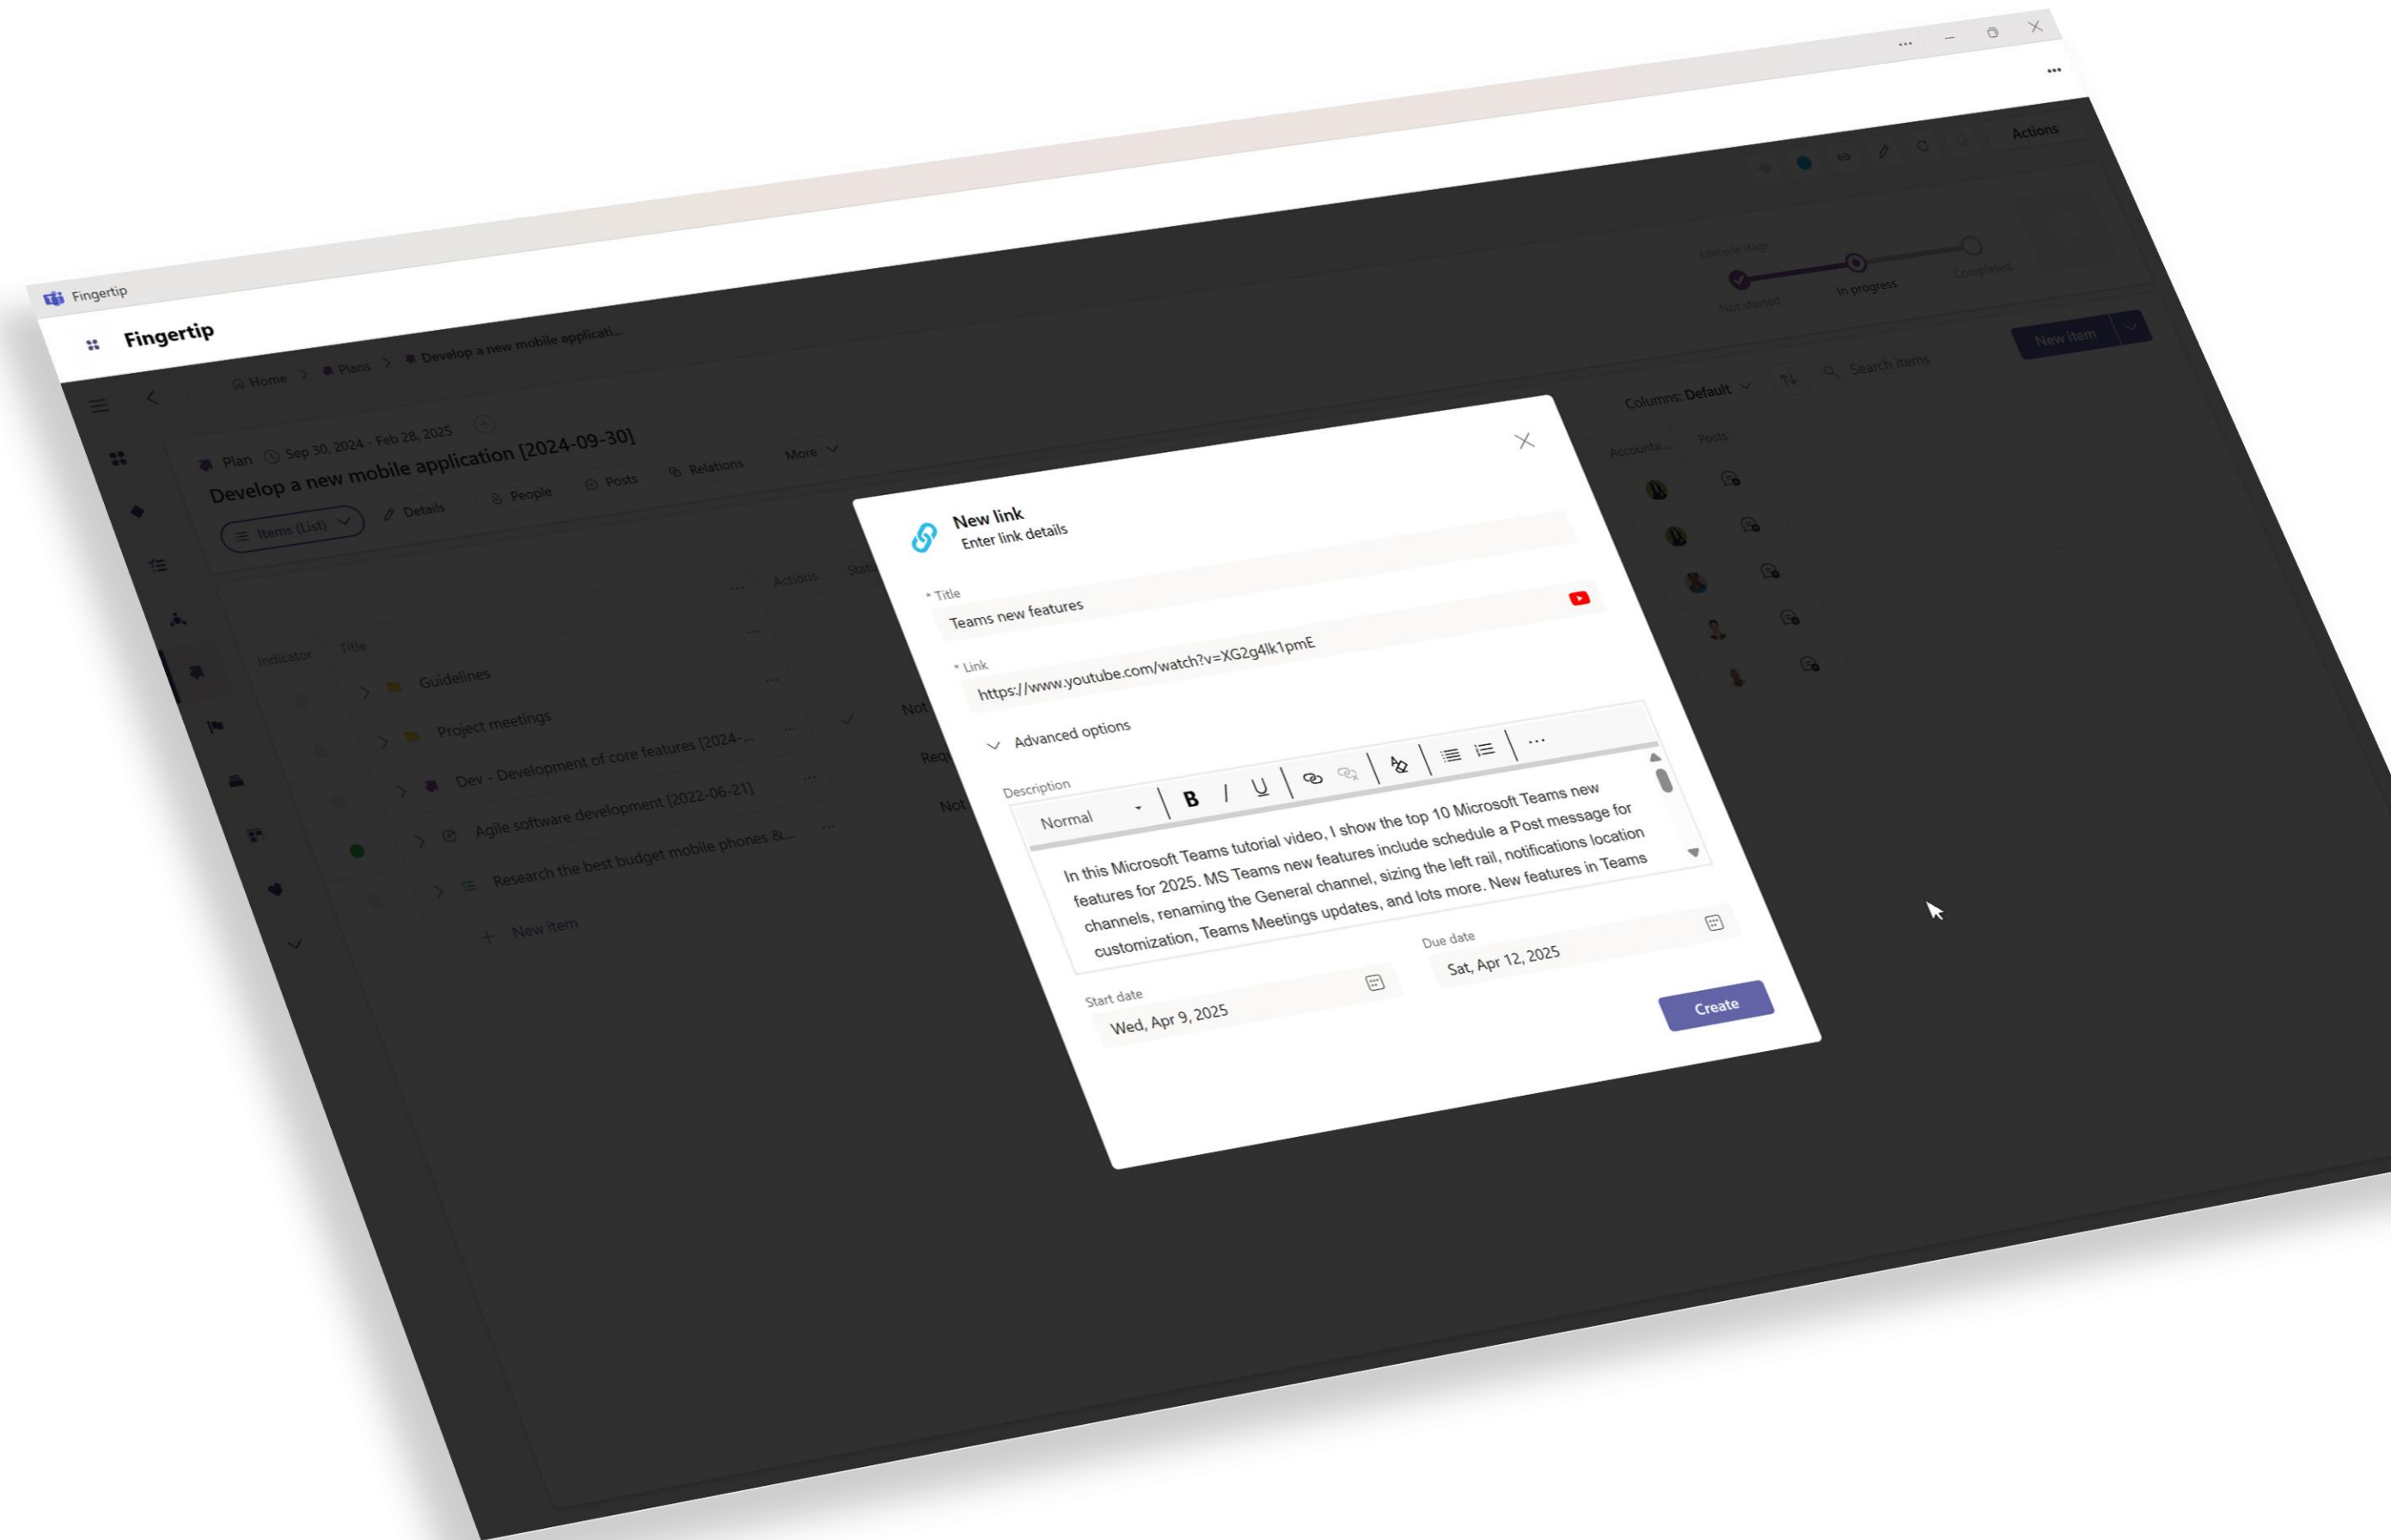

CEO and Founder, Fingertip

# Enhanced link popup

Manage your links more effectively

In this iteration, we introduced a number of awaited updates to the link features in Fingertip. We've added plenty of icons based on the URL destination, try to add a link to YouTube for example!

Additionally, links now have a description field, as well as start and end dates, making sure those important and timely content reaches its intended audiences.

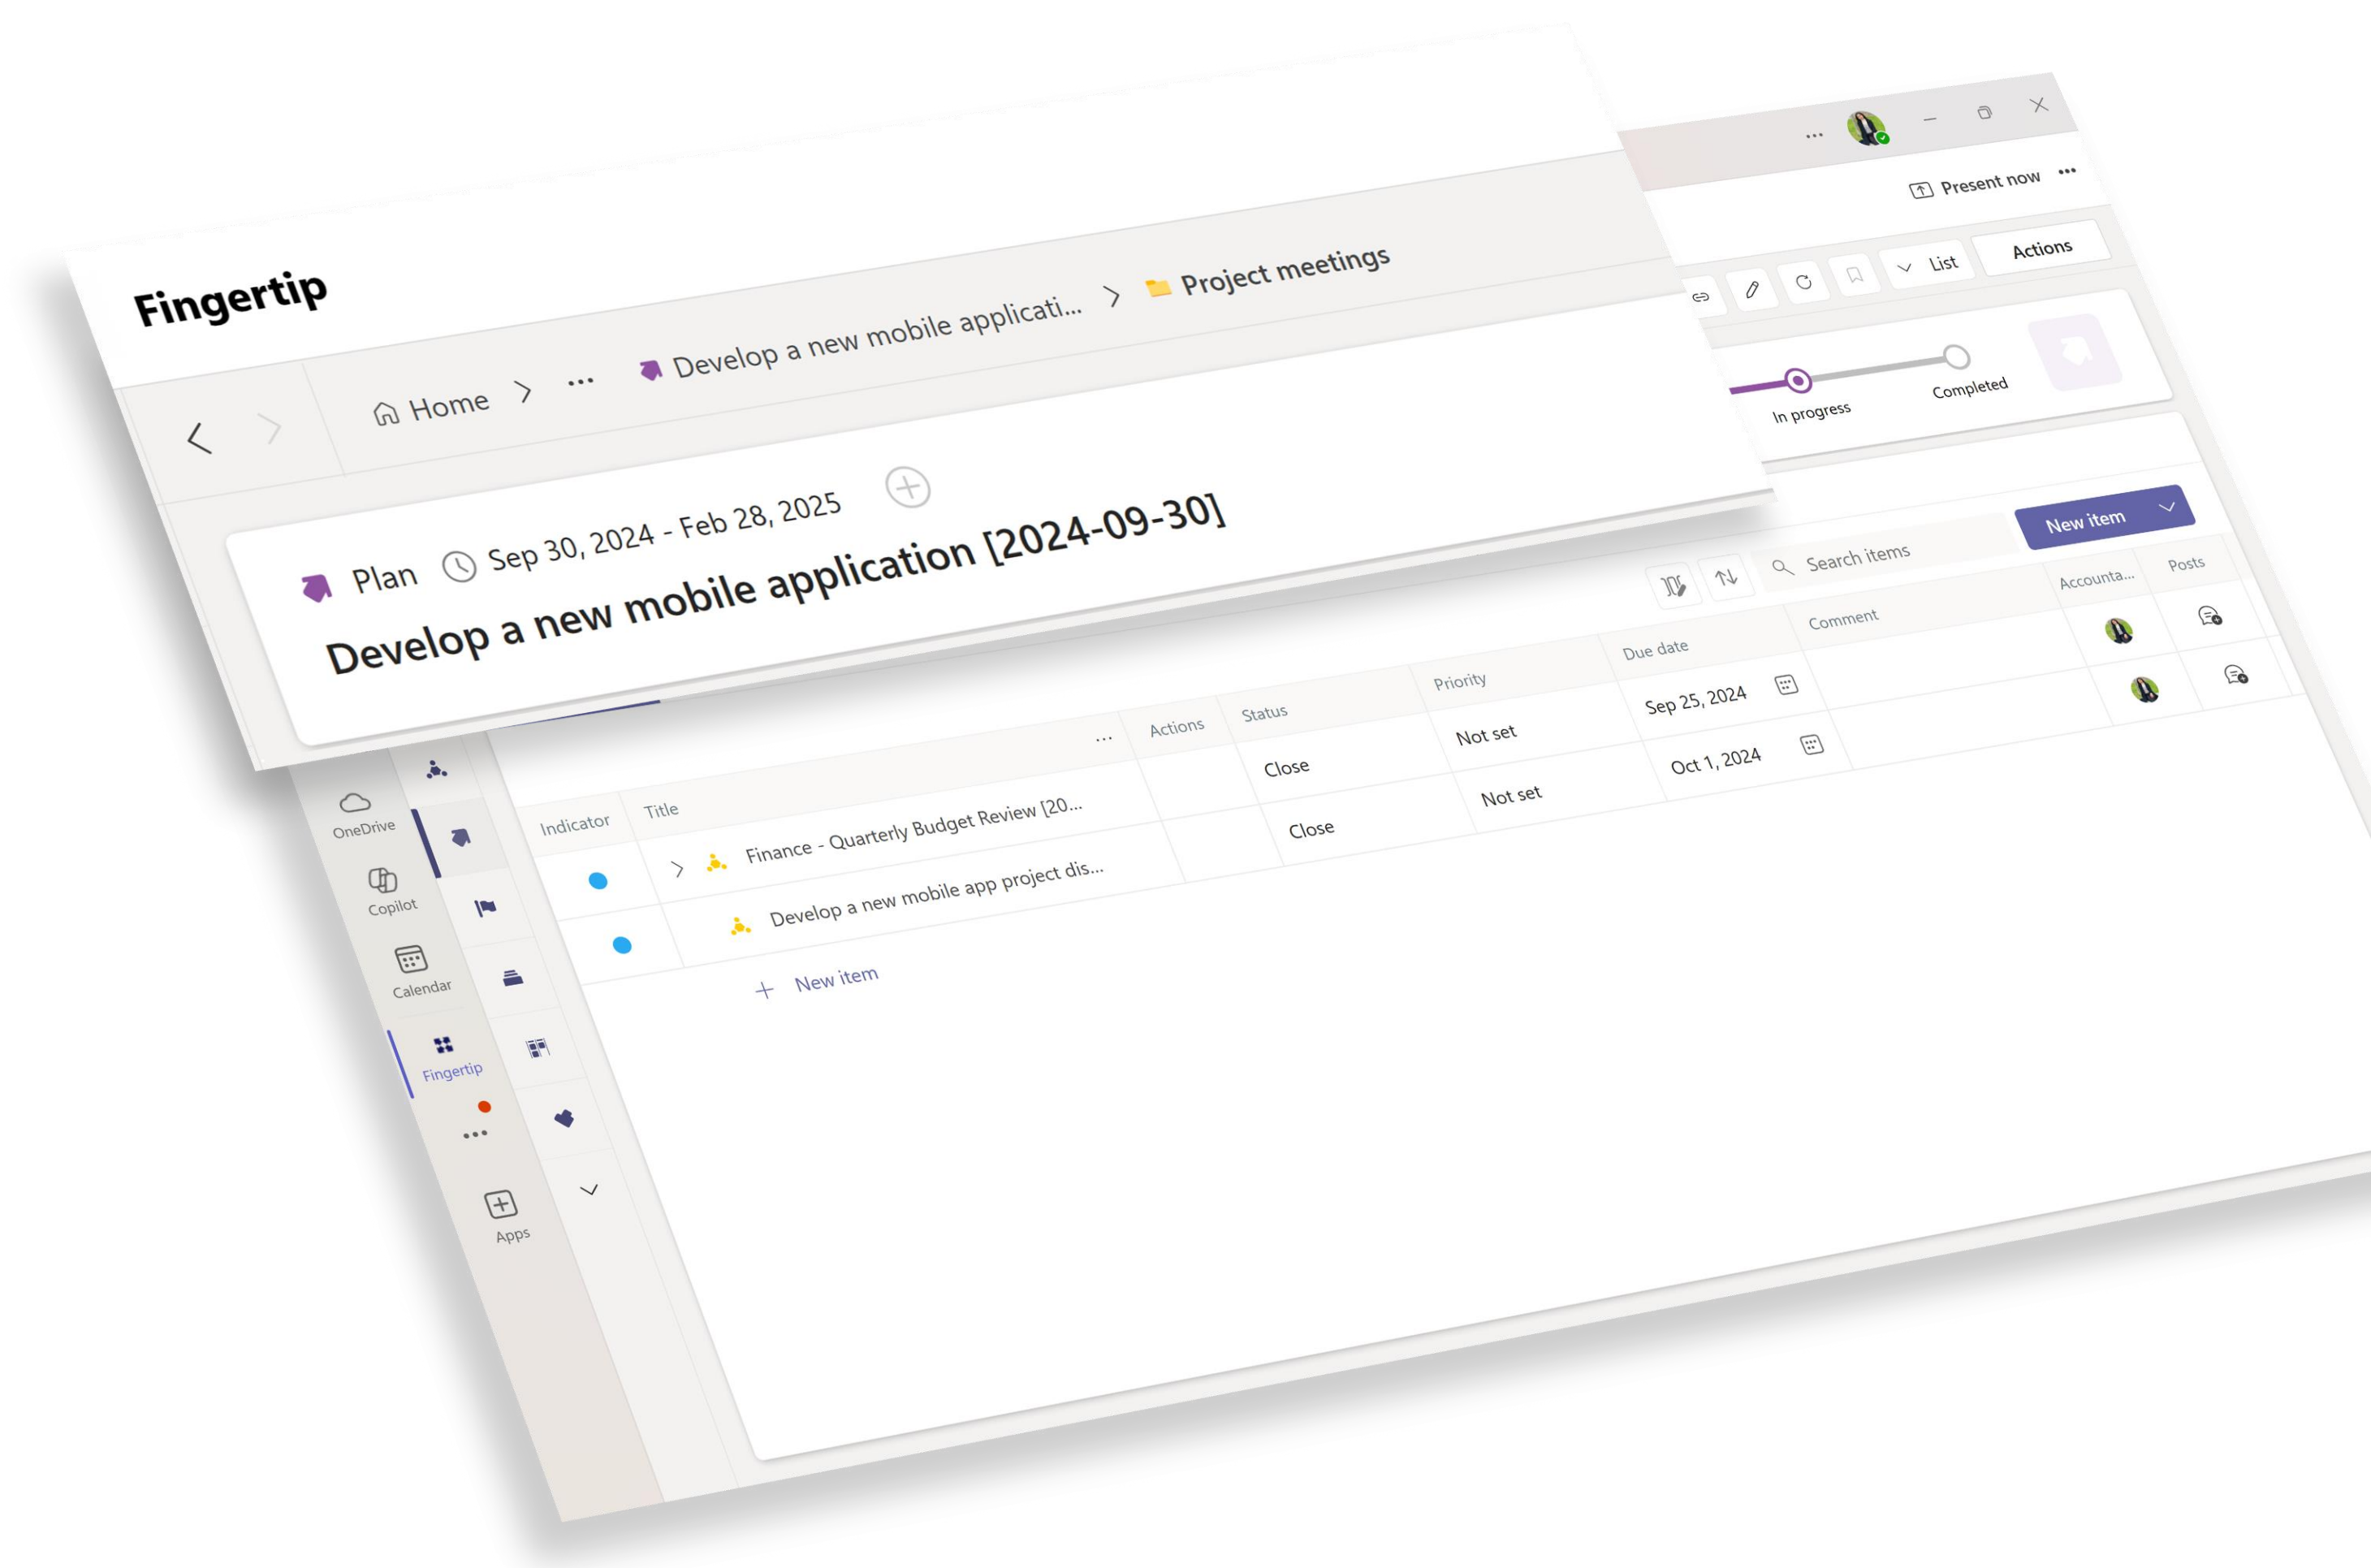

# Universal navigation between screens and folders

Updated breadcrumbs to help you find your way in Fingertip.

Universal navigation through breadcrumbs improves your users' experience by providing an intuitive and efficient way to navigate between screens and folders.

This feature allows users to easily jump back to previous locations without the need to retrace multiple steps, reducing frustration and saving time.

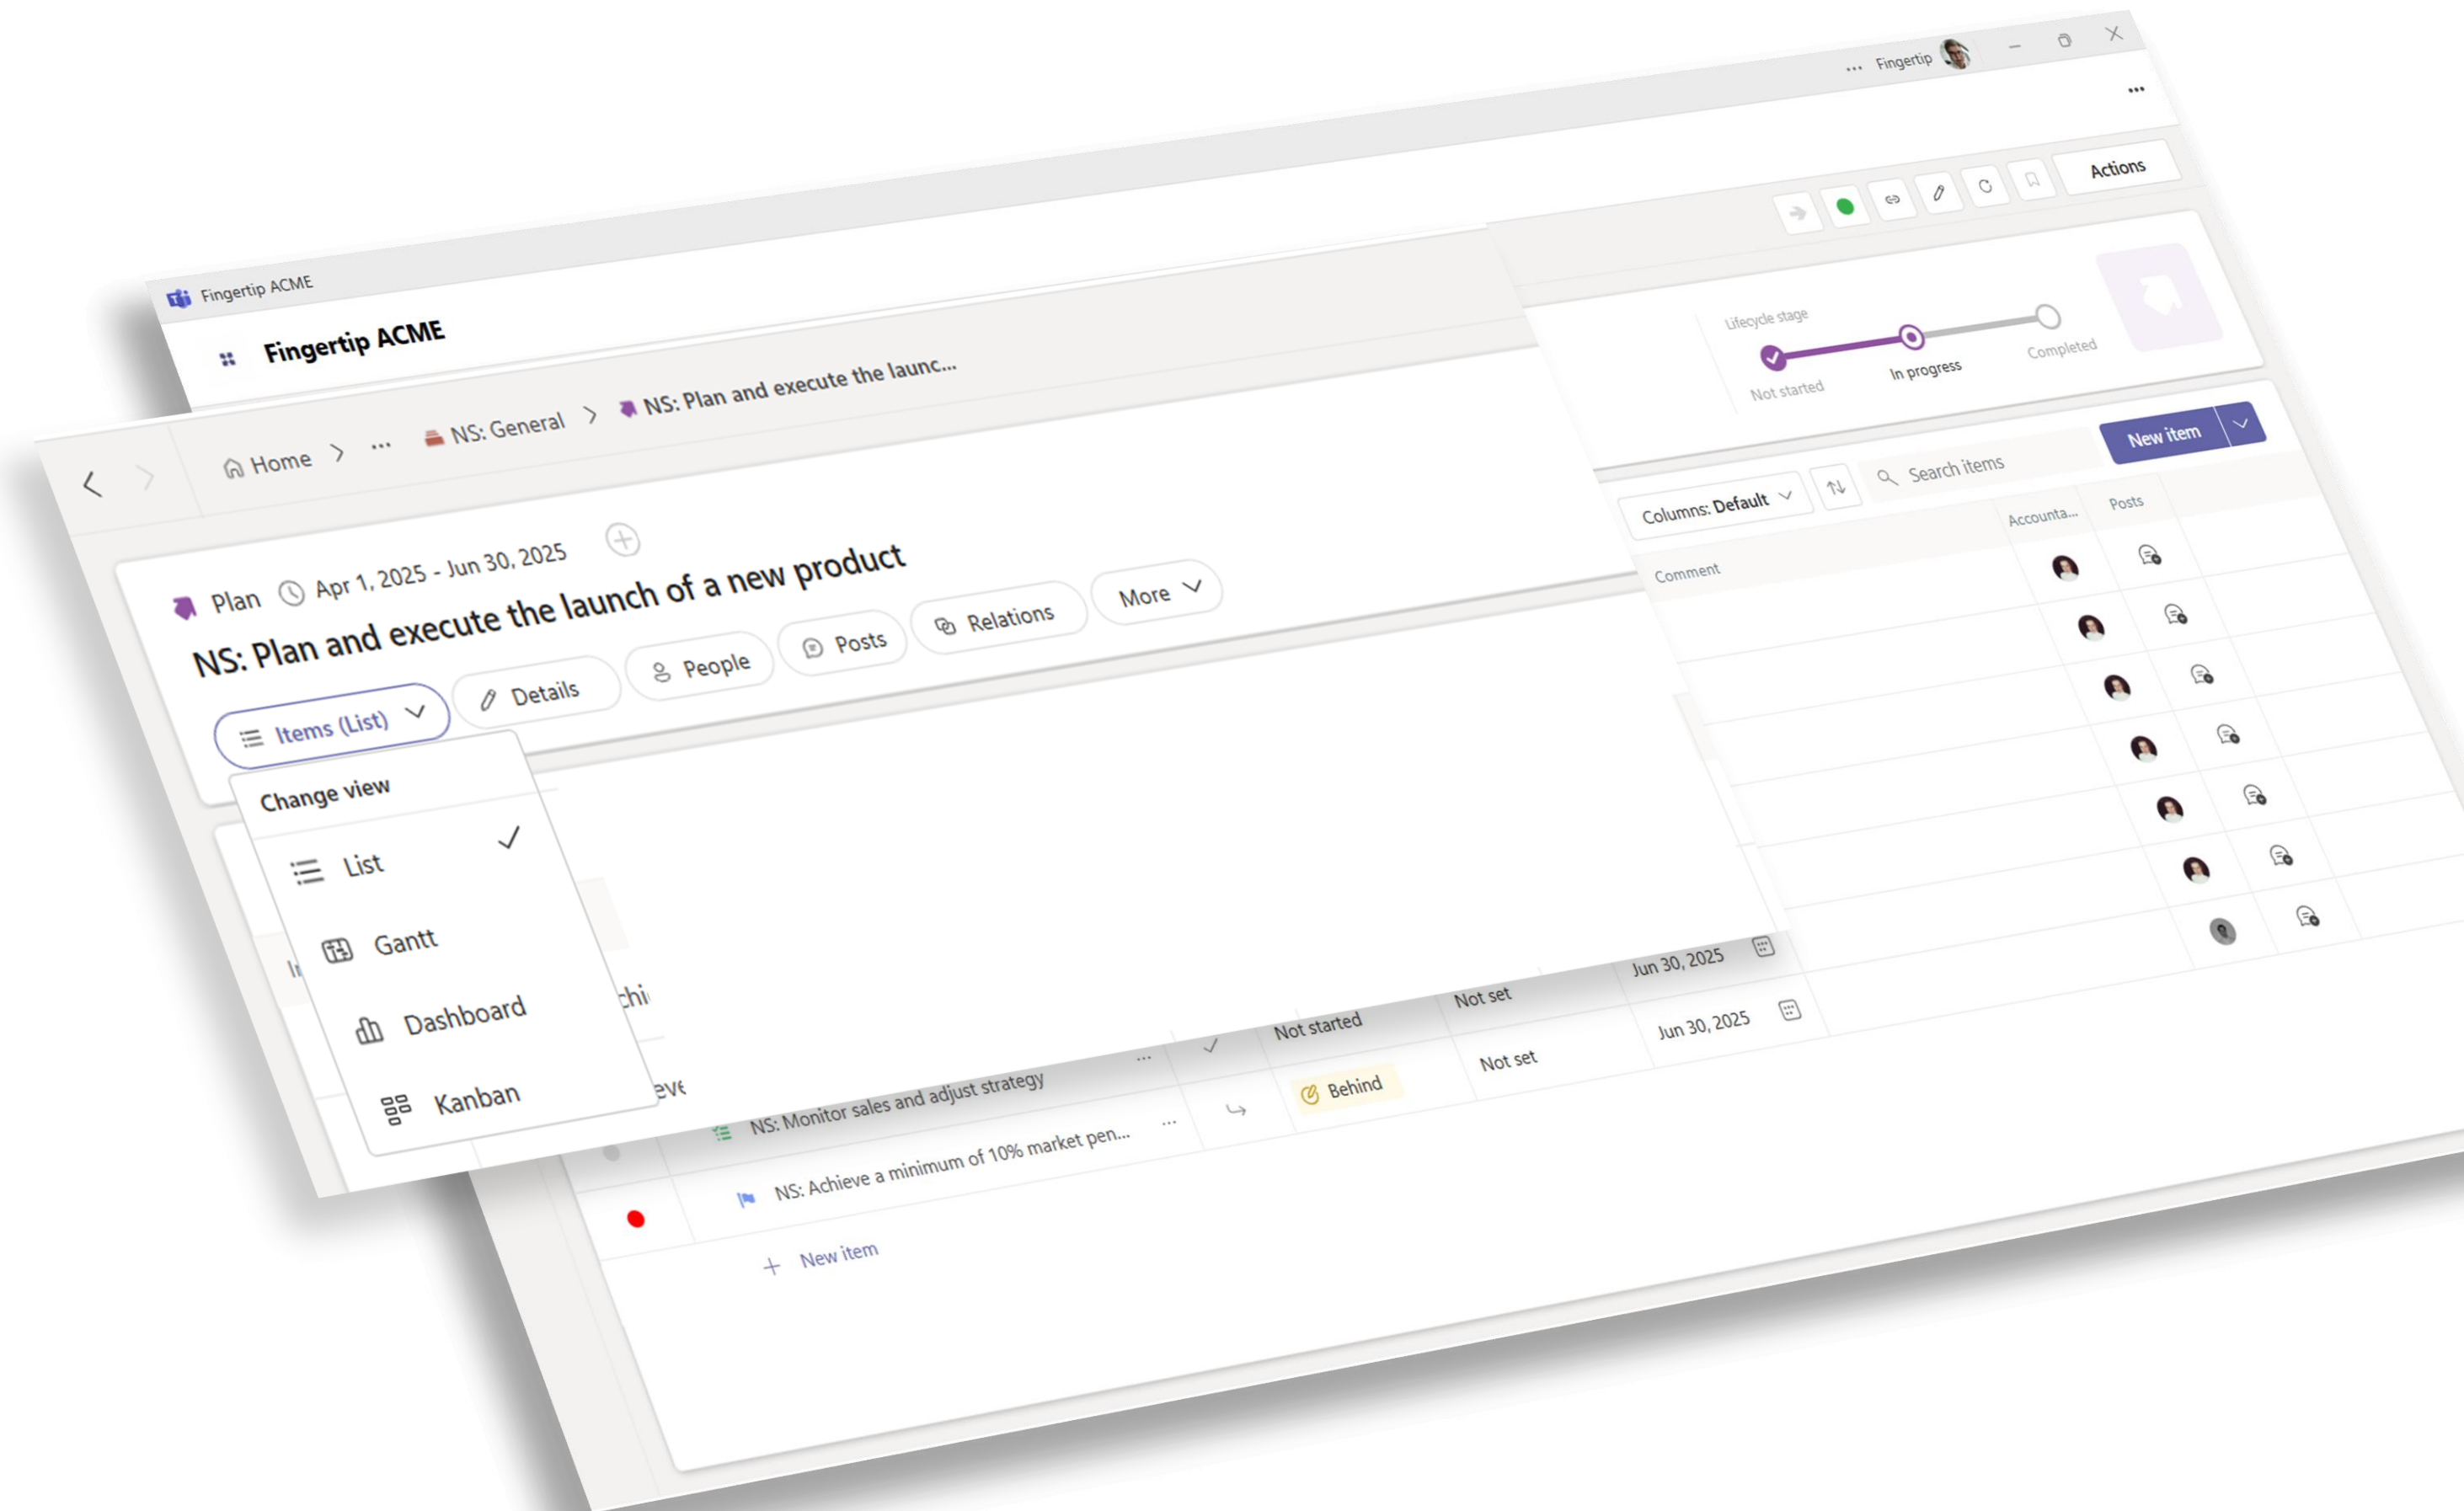

# New UX for tabs and views for all activators

Find the information you are looking for – now much easier.

We have updated our activator navigation with a clear and intuitive interface, enhancing the user's ability to manage all activators. Adding the tabs now in the header as buttons provides easy access to key project information and functionality.

The different views have also been collected in the same menu, under the first tab, making the UI the same everywhere.

The improvements in the navigation help end-users stay organized, informed, and productive while navigating their daily work.

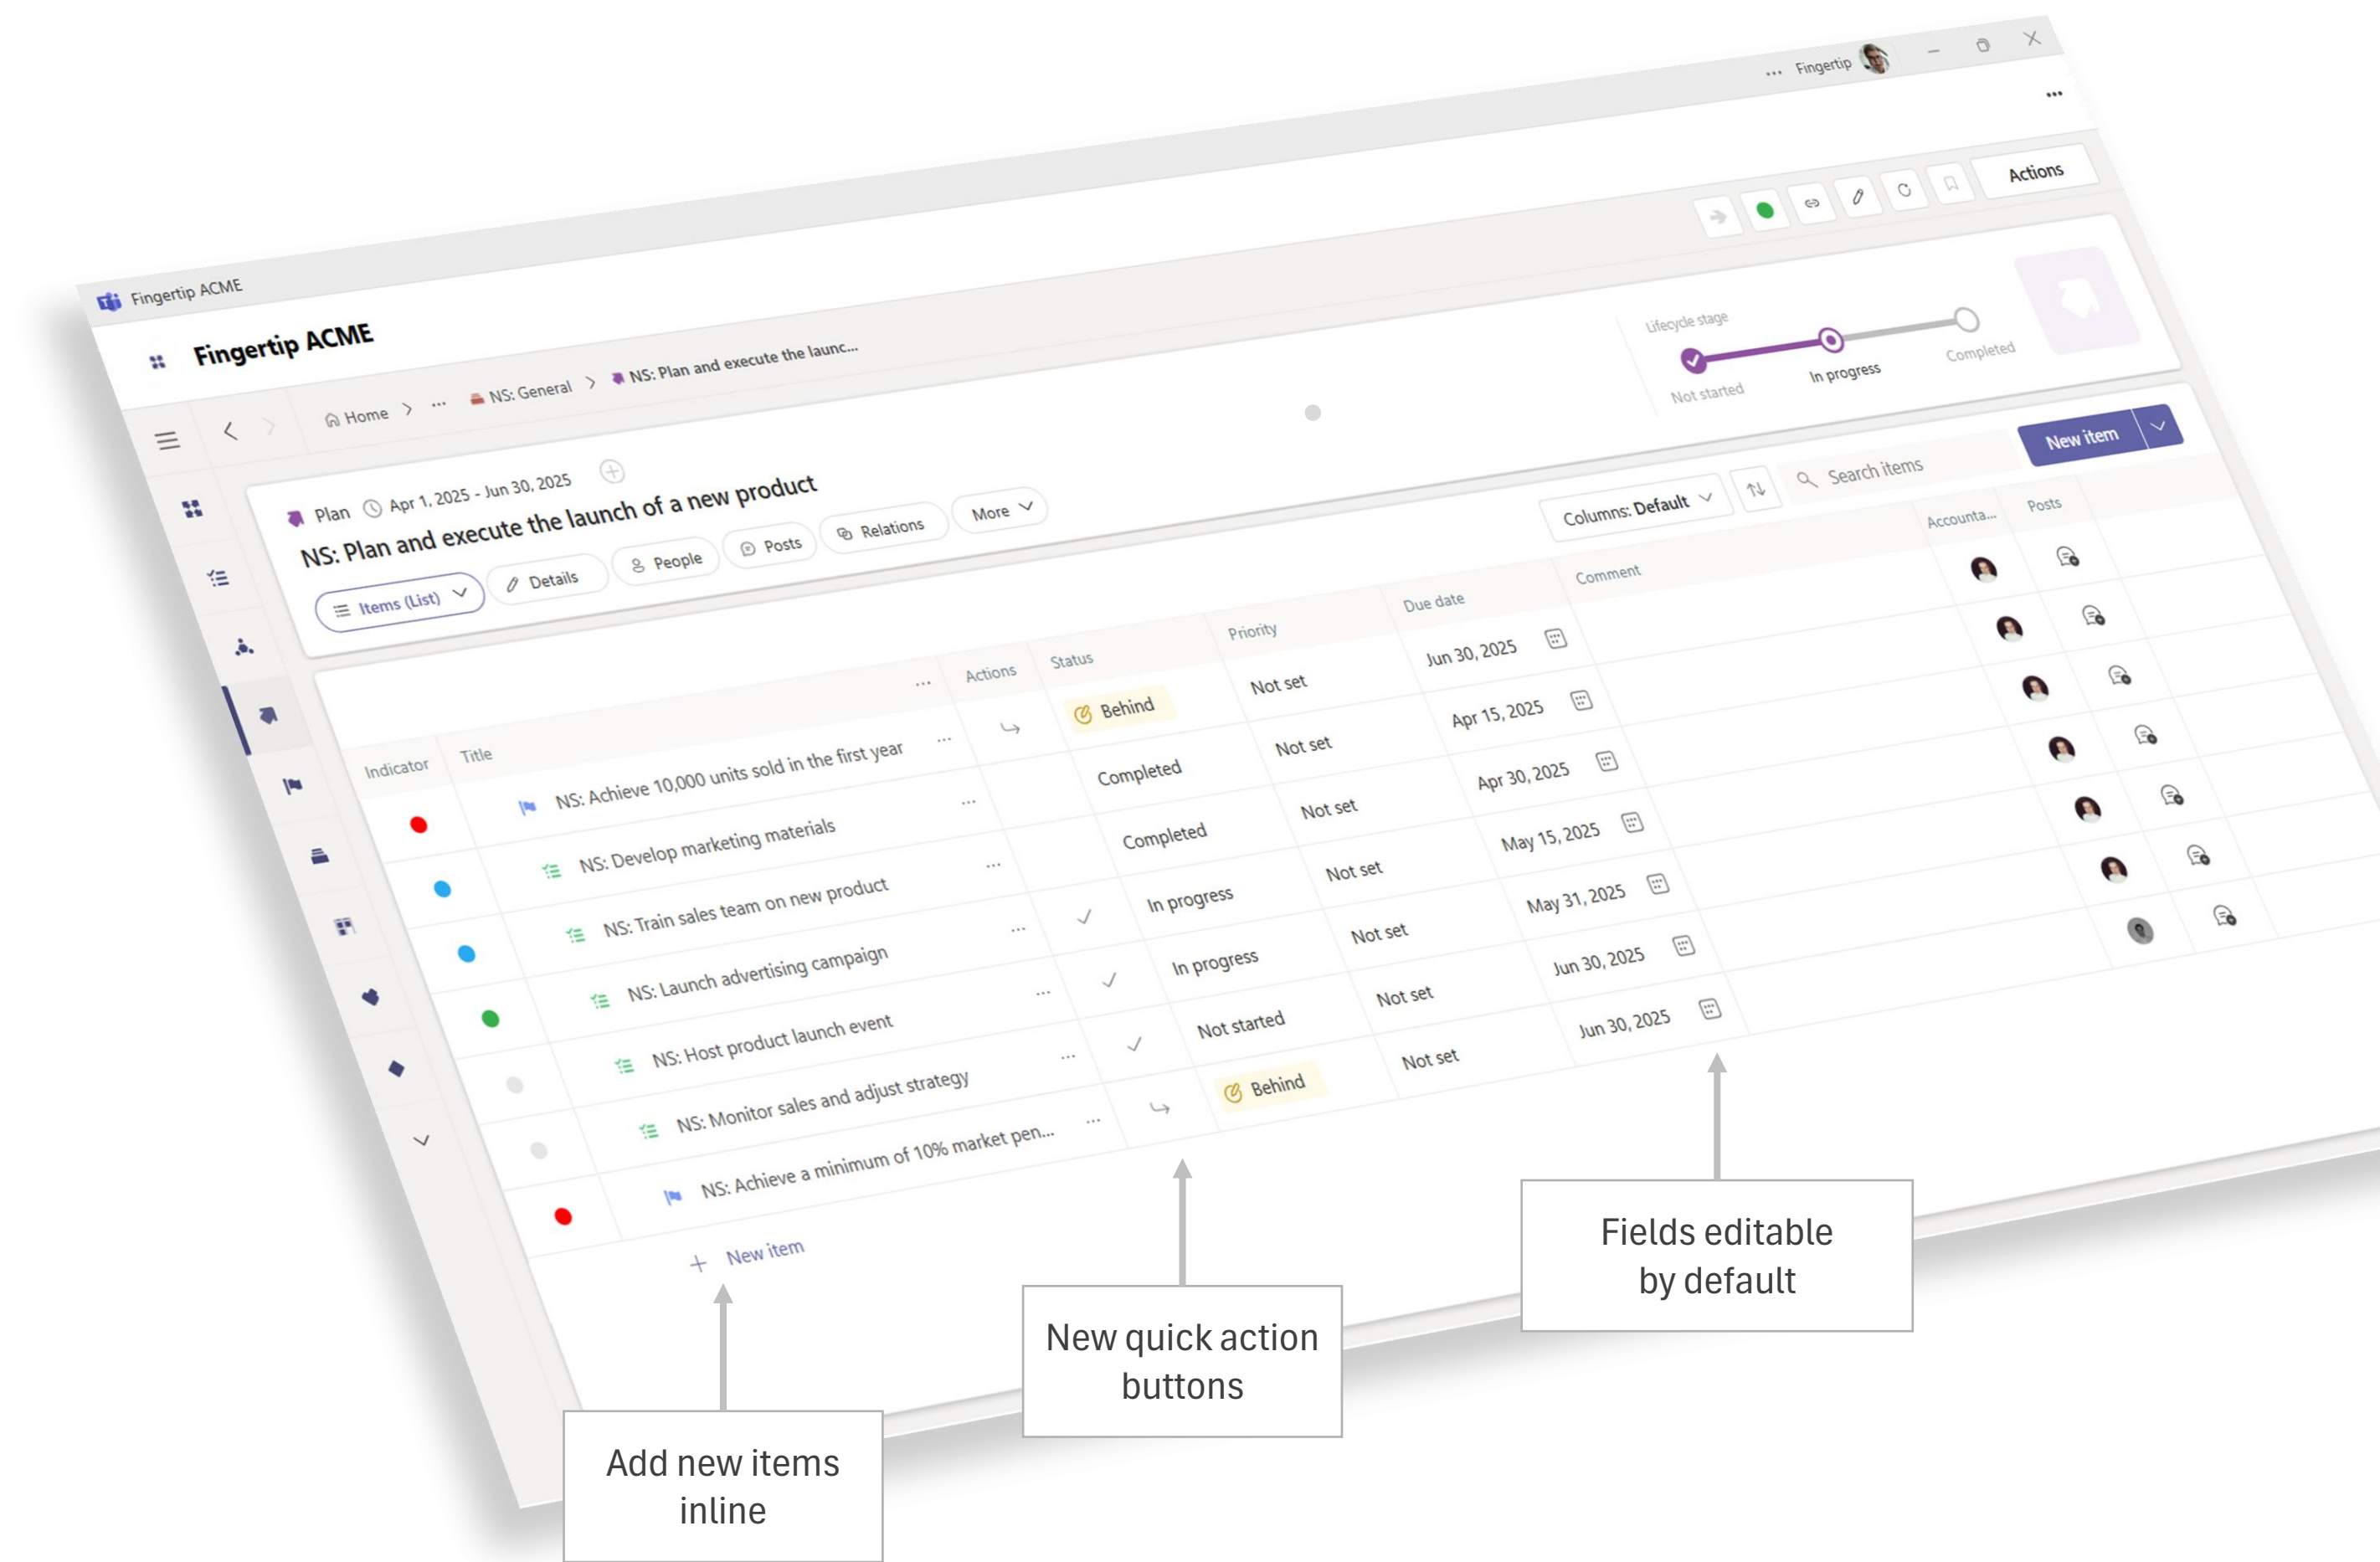

# Renewed plan items tab

Enhancing productivity through intuitive task management

New plan item tab features inline editing by default, a new list layout with horizontal scrolling, and quick actions for streamlining work. These changes will enhance the user experience in project planning and execution, helping users focus more on the actual work.

Inline editing allows users to make changes directly in the plan list view, improving efficiency by reducing multiple clicks for each item.

Additionally, the quick actions feature streamlines Fingertip use by allowing users to complete suggested actions with minimal clicks, providing immediate feedback and keeping users engaged.

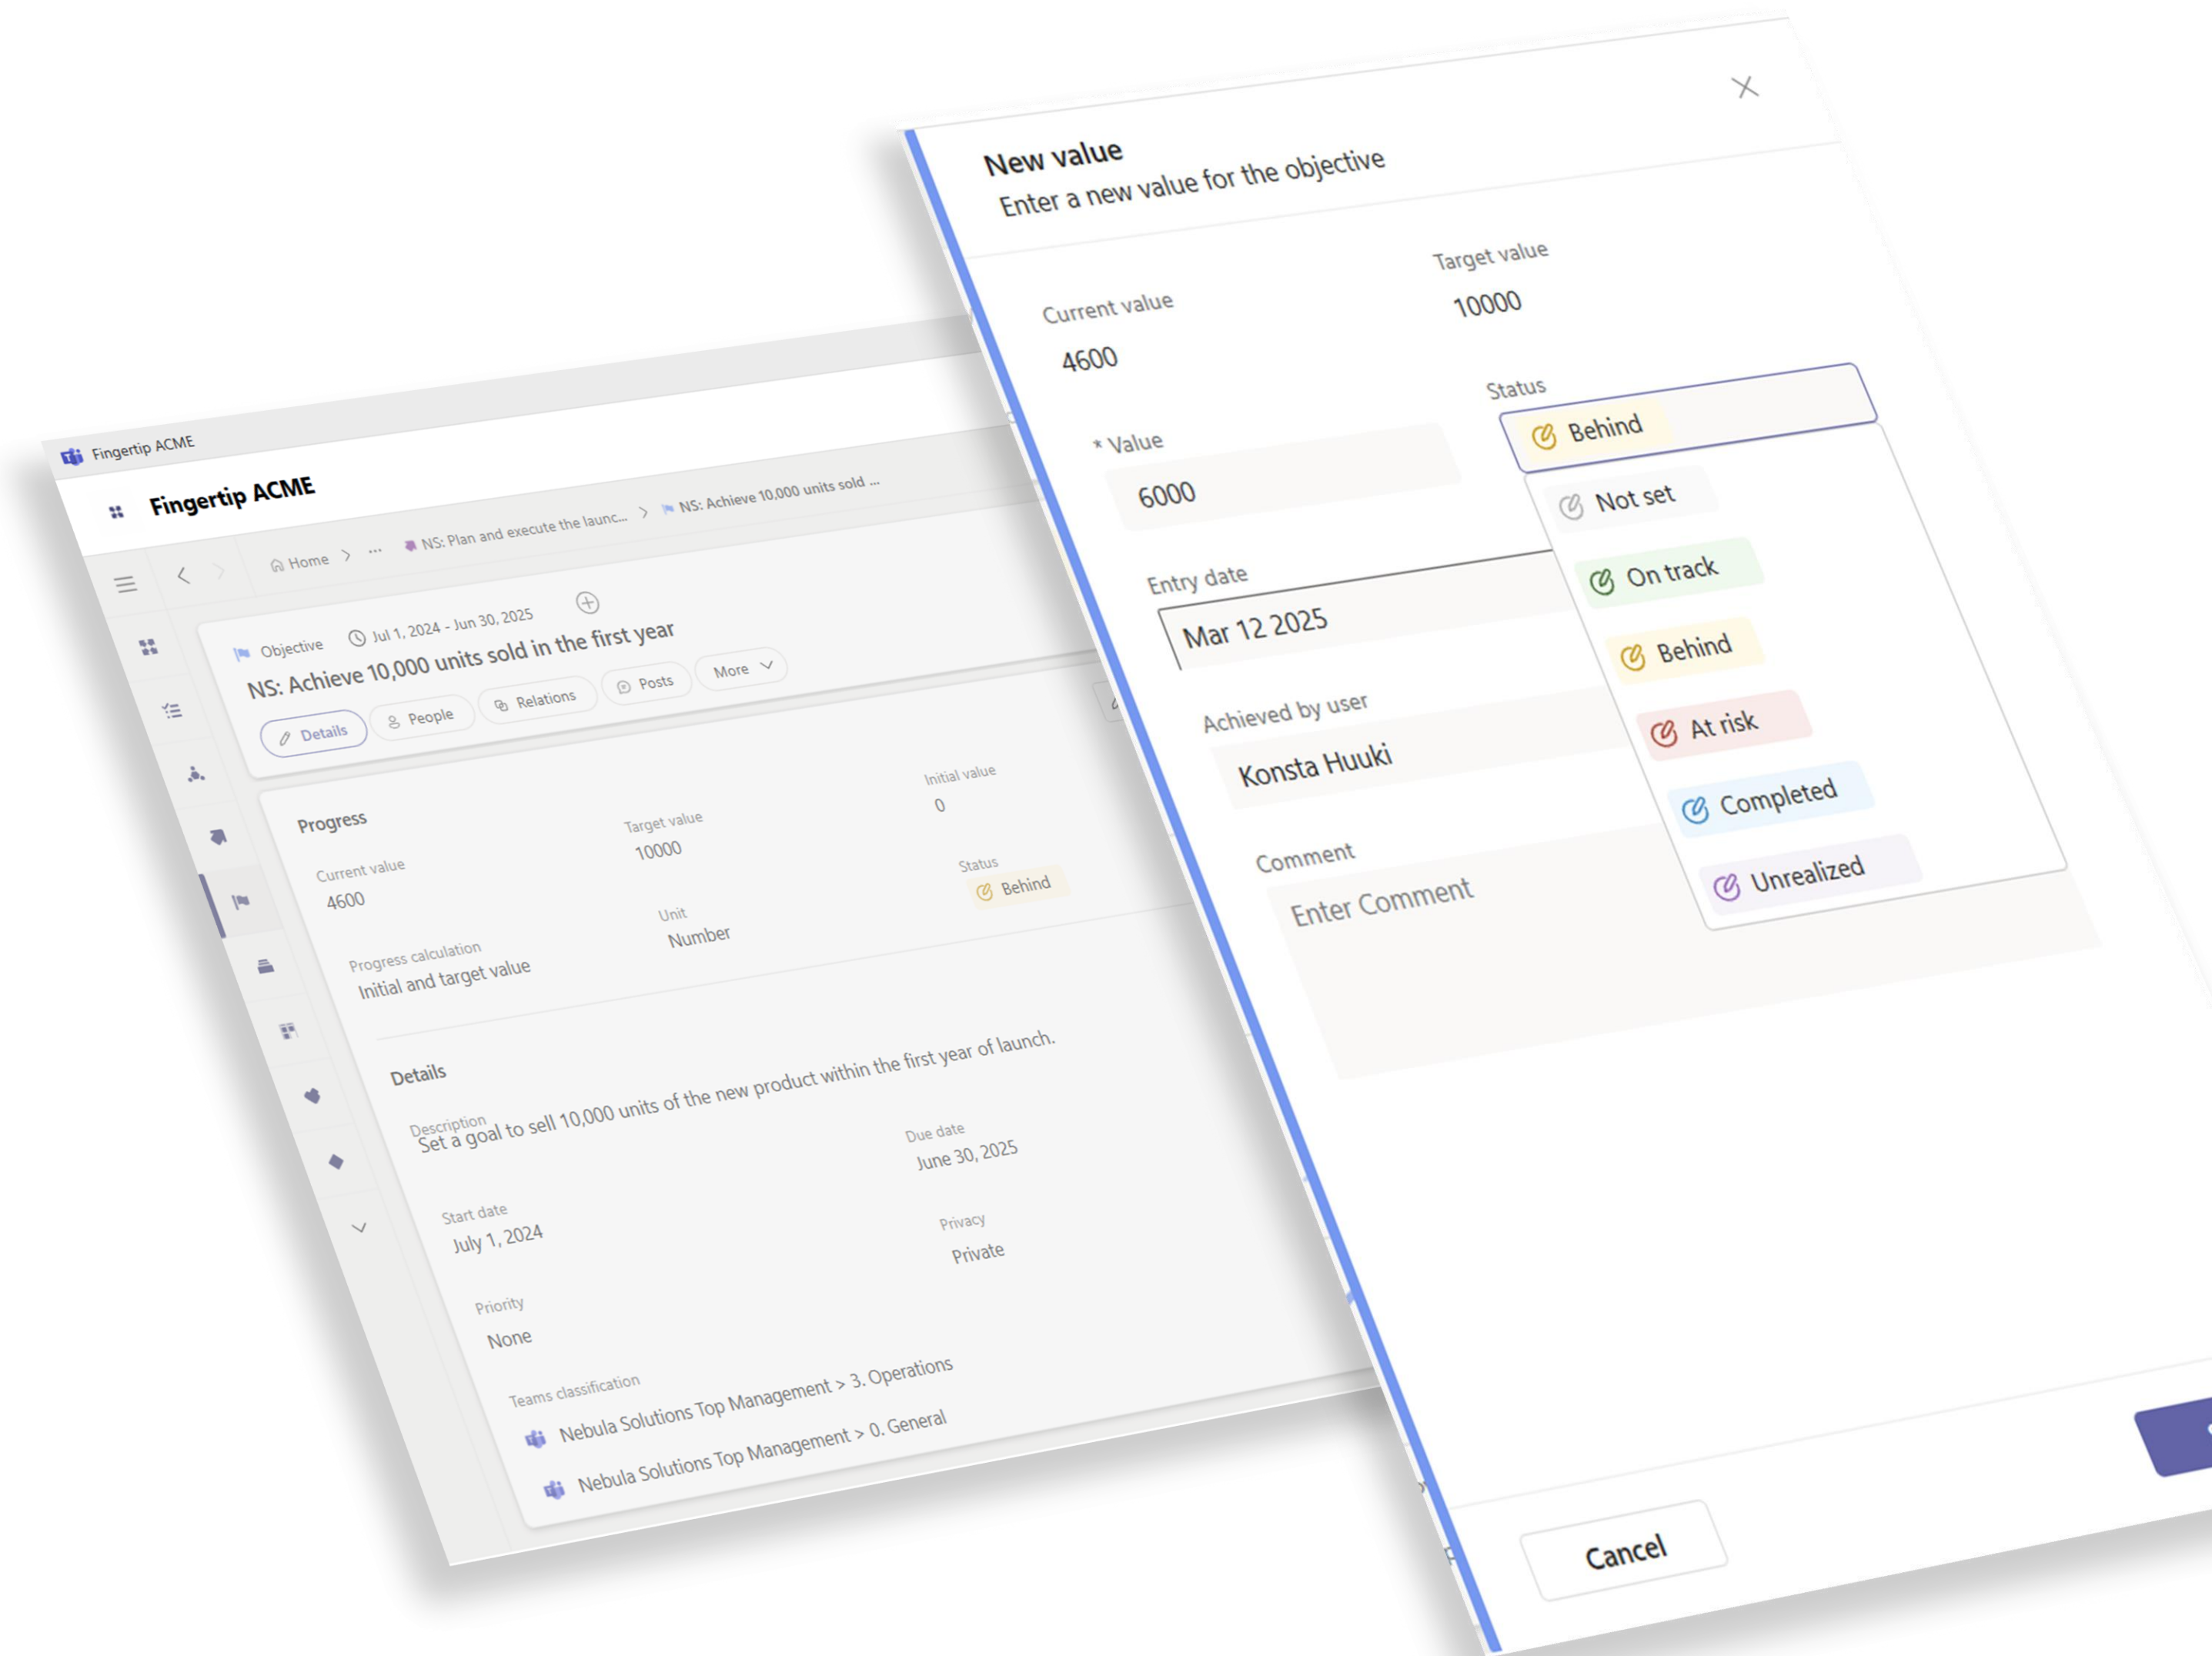

# Visual and user-friendly status updates

Helping you keep track of your progress with less work

Objective status now updates automatically based on entered values, ensuring that objectives are accurately tracked. The user can choose to override the status update manually while adding a new objective value. We have also added color coding to help track progress even faster, making objectives prettier in the process!

When updating child objectives that also impact the parent objective, Fingertip will also update the parent's status based on the new progress.

We have also made the objective vastly easier to use by combining some colliding information and collecting all the relevant information in the details screen in a more intuitive view.
