Fingertip 4.3 – Highlights

Major leap in UX and clarity

Fingertip 4.3 is the result of months of focused development - built with you. Throughout the spring, we’ve worked closely with our customers to reimagine how our Leadership OS should feel. Every two weeks our dev team has published a faster, cleaner, more intuitive Fingertip that helps teams focus on what matters.

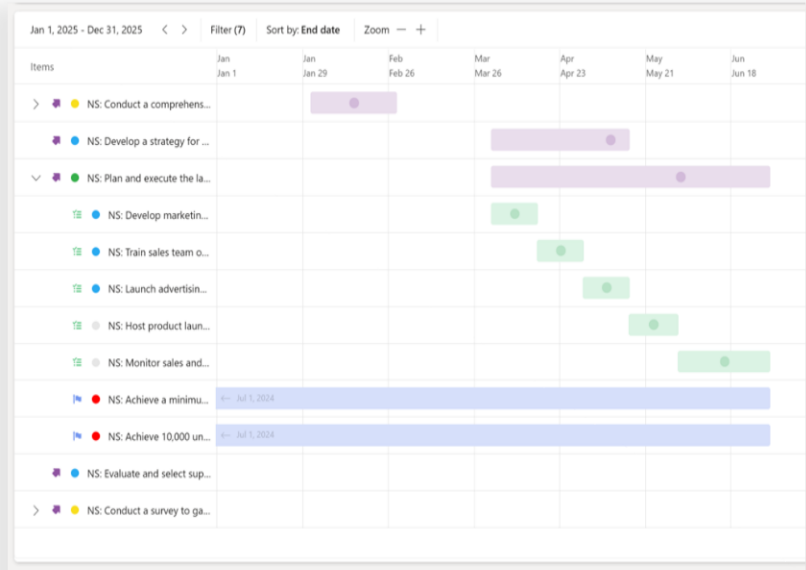

The goal of working with real users is to improve the user experience, which has been rebuilt from the inside out. Every view, function, and component has been refined for ease of use and optimized for performance. You will notice the difference immediately after booting up.

Here are some key features of this release:

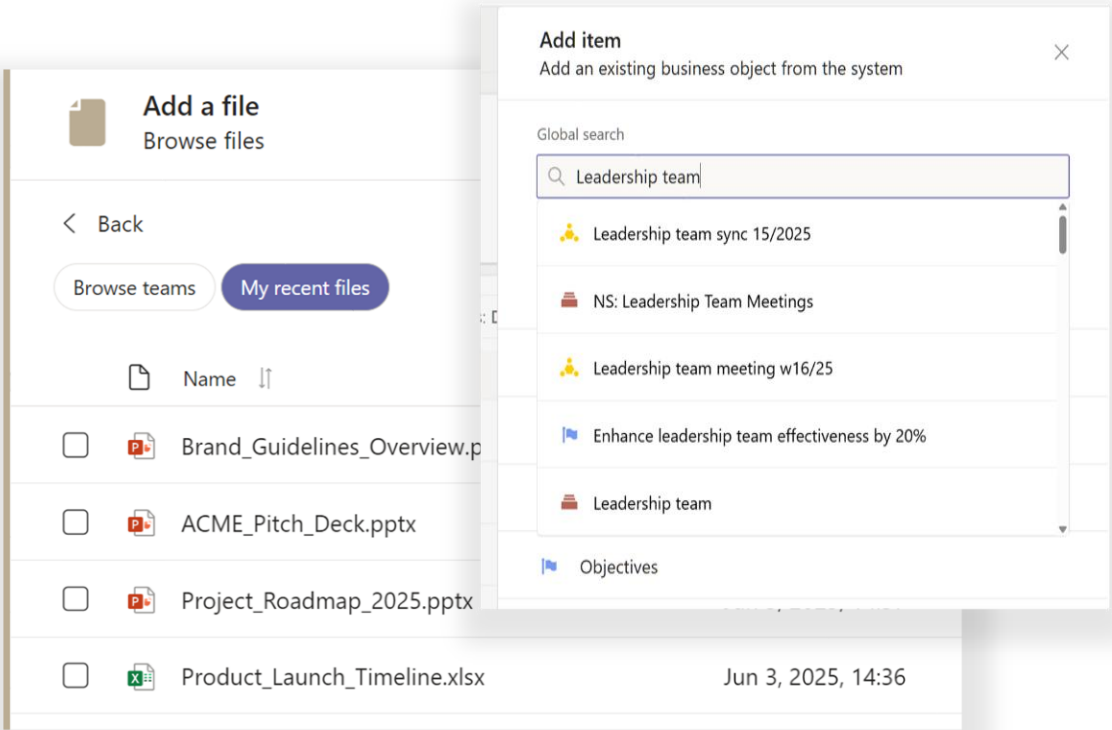

- 1. Multi-level **Gantt charts** with expandable objectives and plans
- 2. New **Global search** in Add Item sidebar and “**My recent files**” shortcut
- 3. New **calendar integration** component with direct Outlook integration and Fingertip agenda creation
- 4. New **menu and navigation update** with more consistent user experience with breadcrumbs and buttons under titles

Preview features

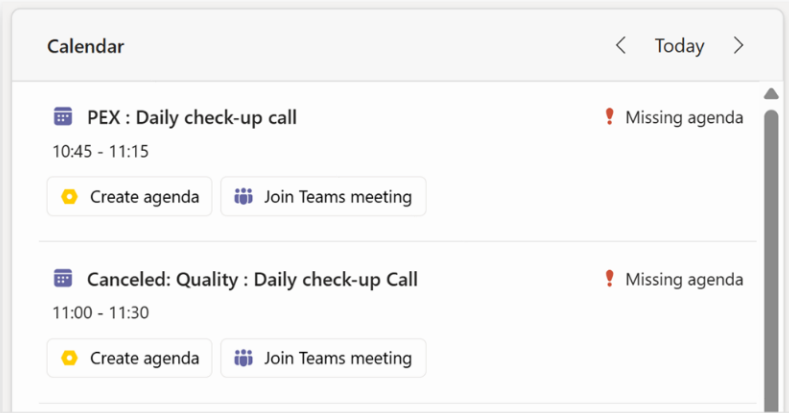

- 5. Improved **Sunburst** with extra ring, better navigation, and hover tips
- 6. New **Annual Clock** configuration and settings – create new items directly on an annual clock!

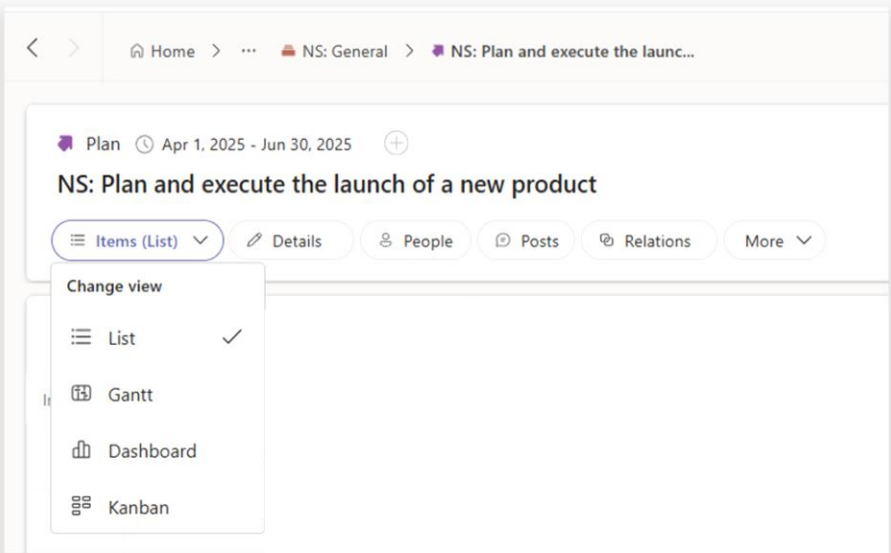

1. Multi-level Gantt charts

2. Global search and recent files

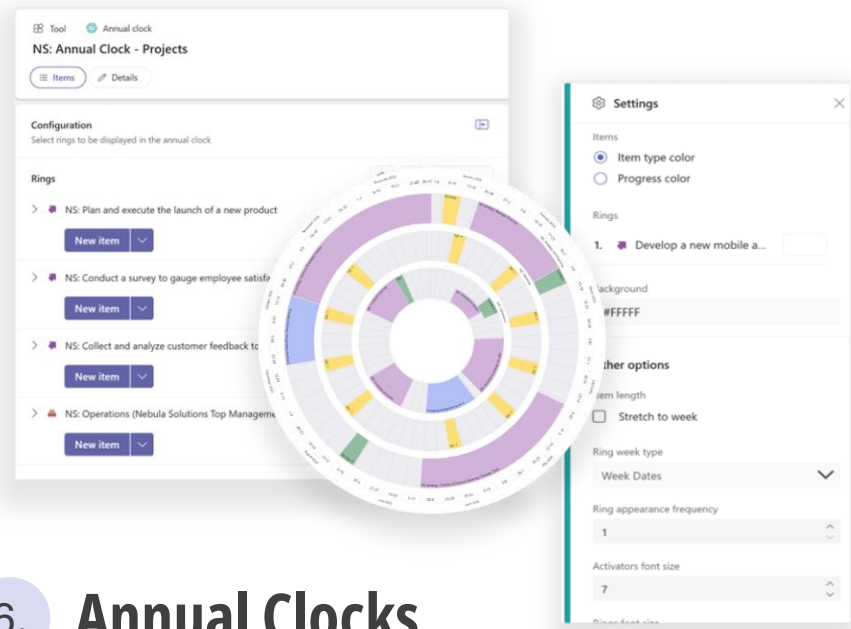

3. Calendar integration

4. Menu and navigation update

5. Sunburst

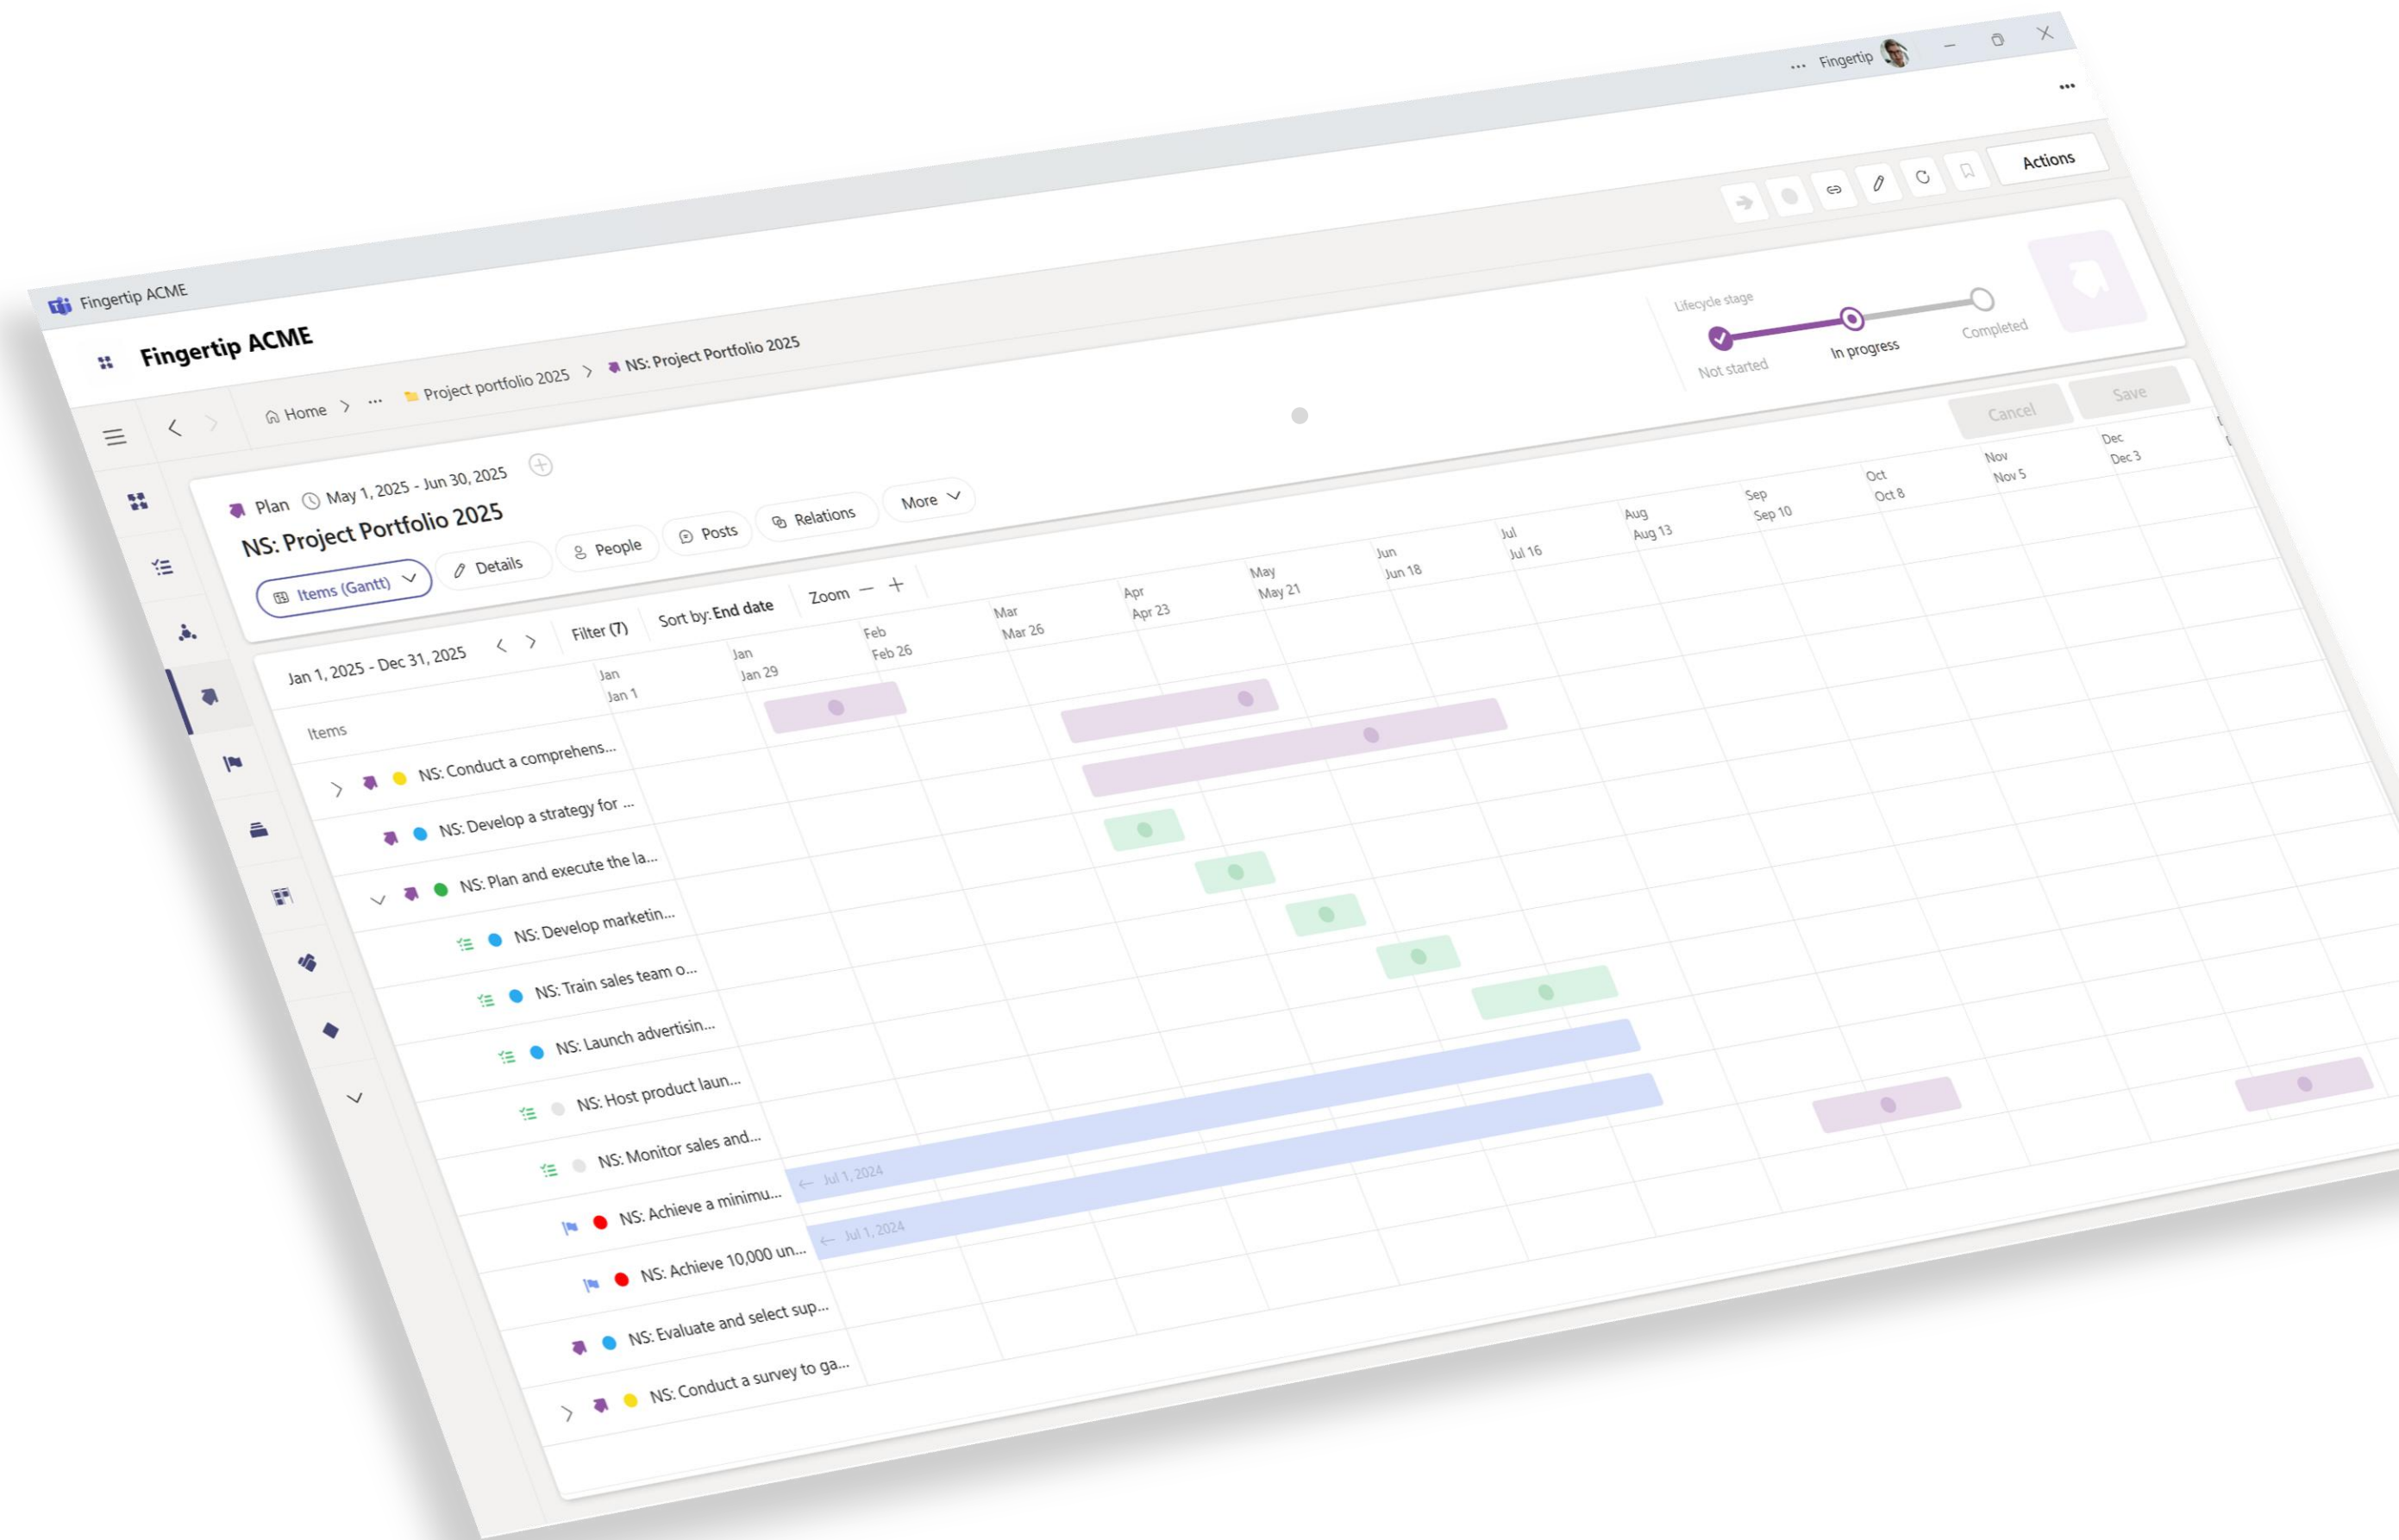

6. Annual Clocks

Expandable Gantt view

Navigate project timelines with multi-level visibility

To make planning more transparent, the Gantt view now allows users to **expand plan and objective items that contain sub-items**. When expanded, these items reveal their full hierarchy, including timelines for child tasks and objectives—all shown directly in the Gantt chart without switching views.

This gives project managers and teams a clearer understanding of how work is structured and connected. It supports better scheduling, makes it easier to spot gaps or overlaps, and helps coordinate across different workstreams more effectively.

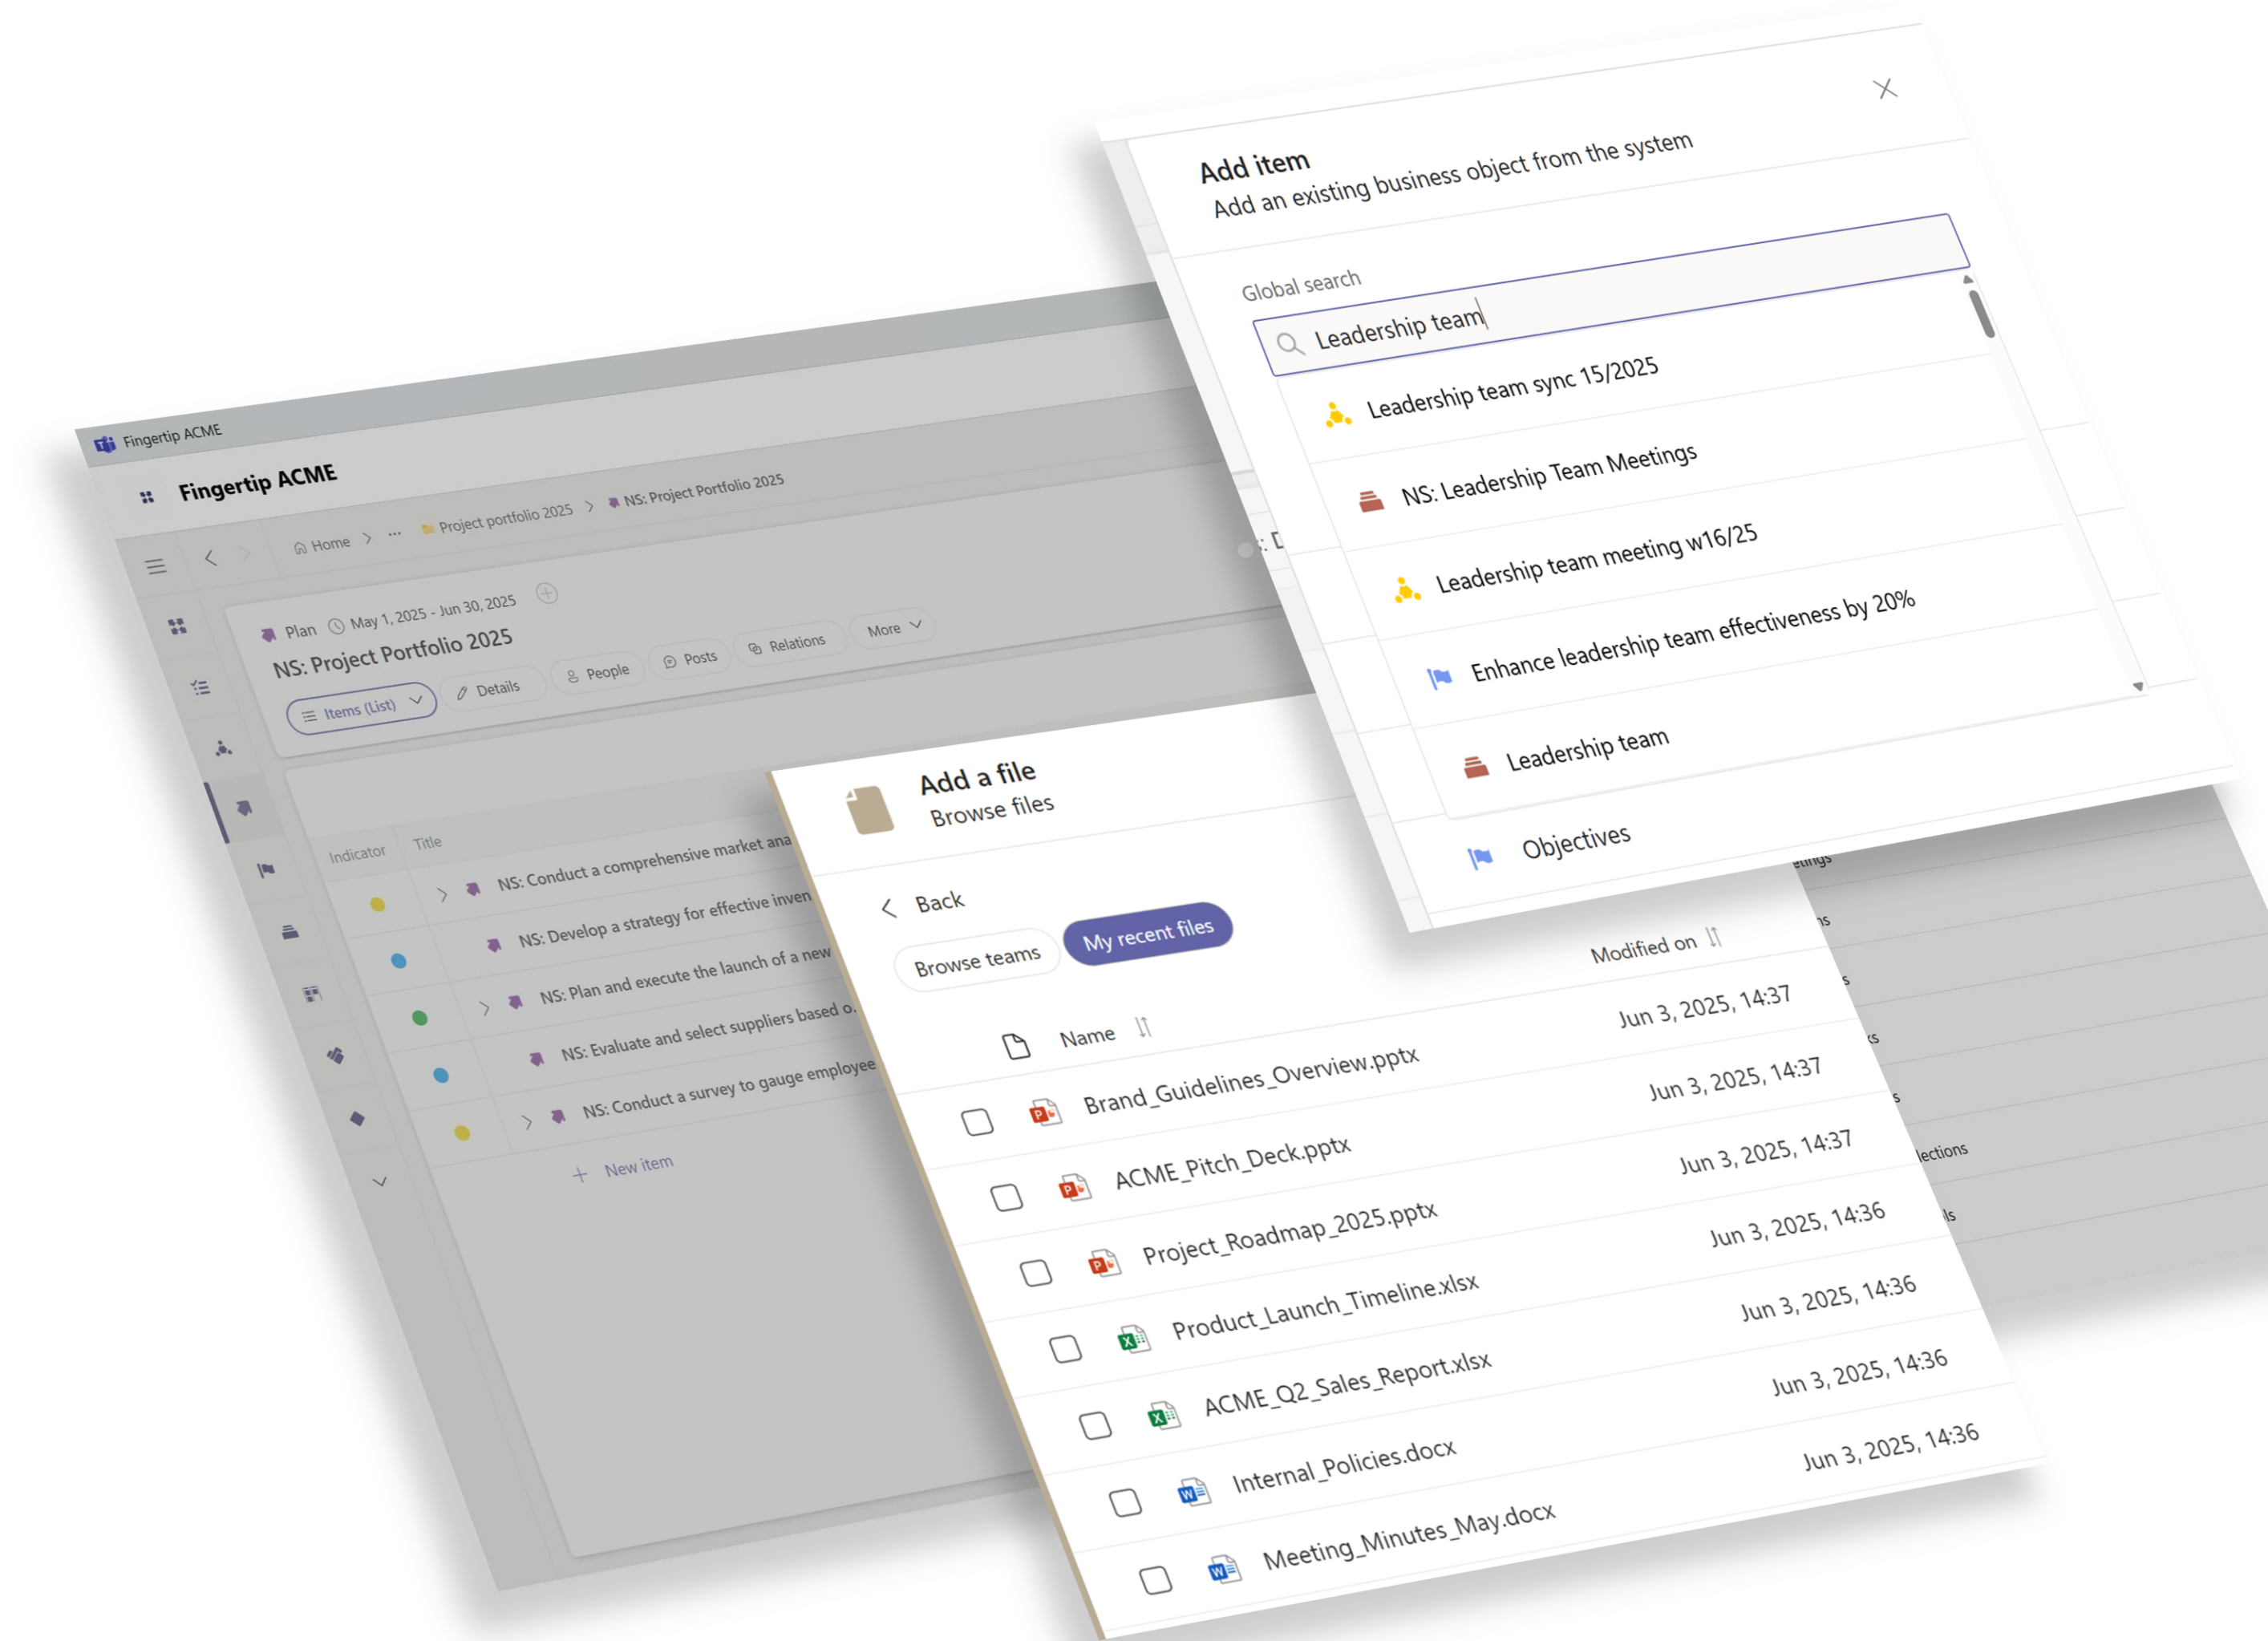

Smarter item search & recent files

Work faster with global search and file shortcuts

Adding existing content is now easier with a new global search built into the “Add item” sidebar. You can search across plans, meetings, relations, and more to quickly find and attach activators, collections, or other linked items. A new “My recent files” section also helps you attach recent uploads instantly, without navigating through folders.

With faster access to relevant content, users can spend less time managing files and more time progressing their work—whether they're setting up meetings, building plans, or aligning teams.

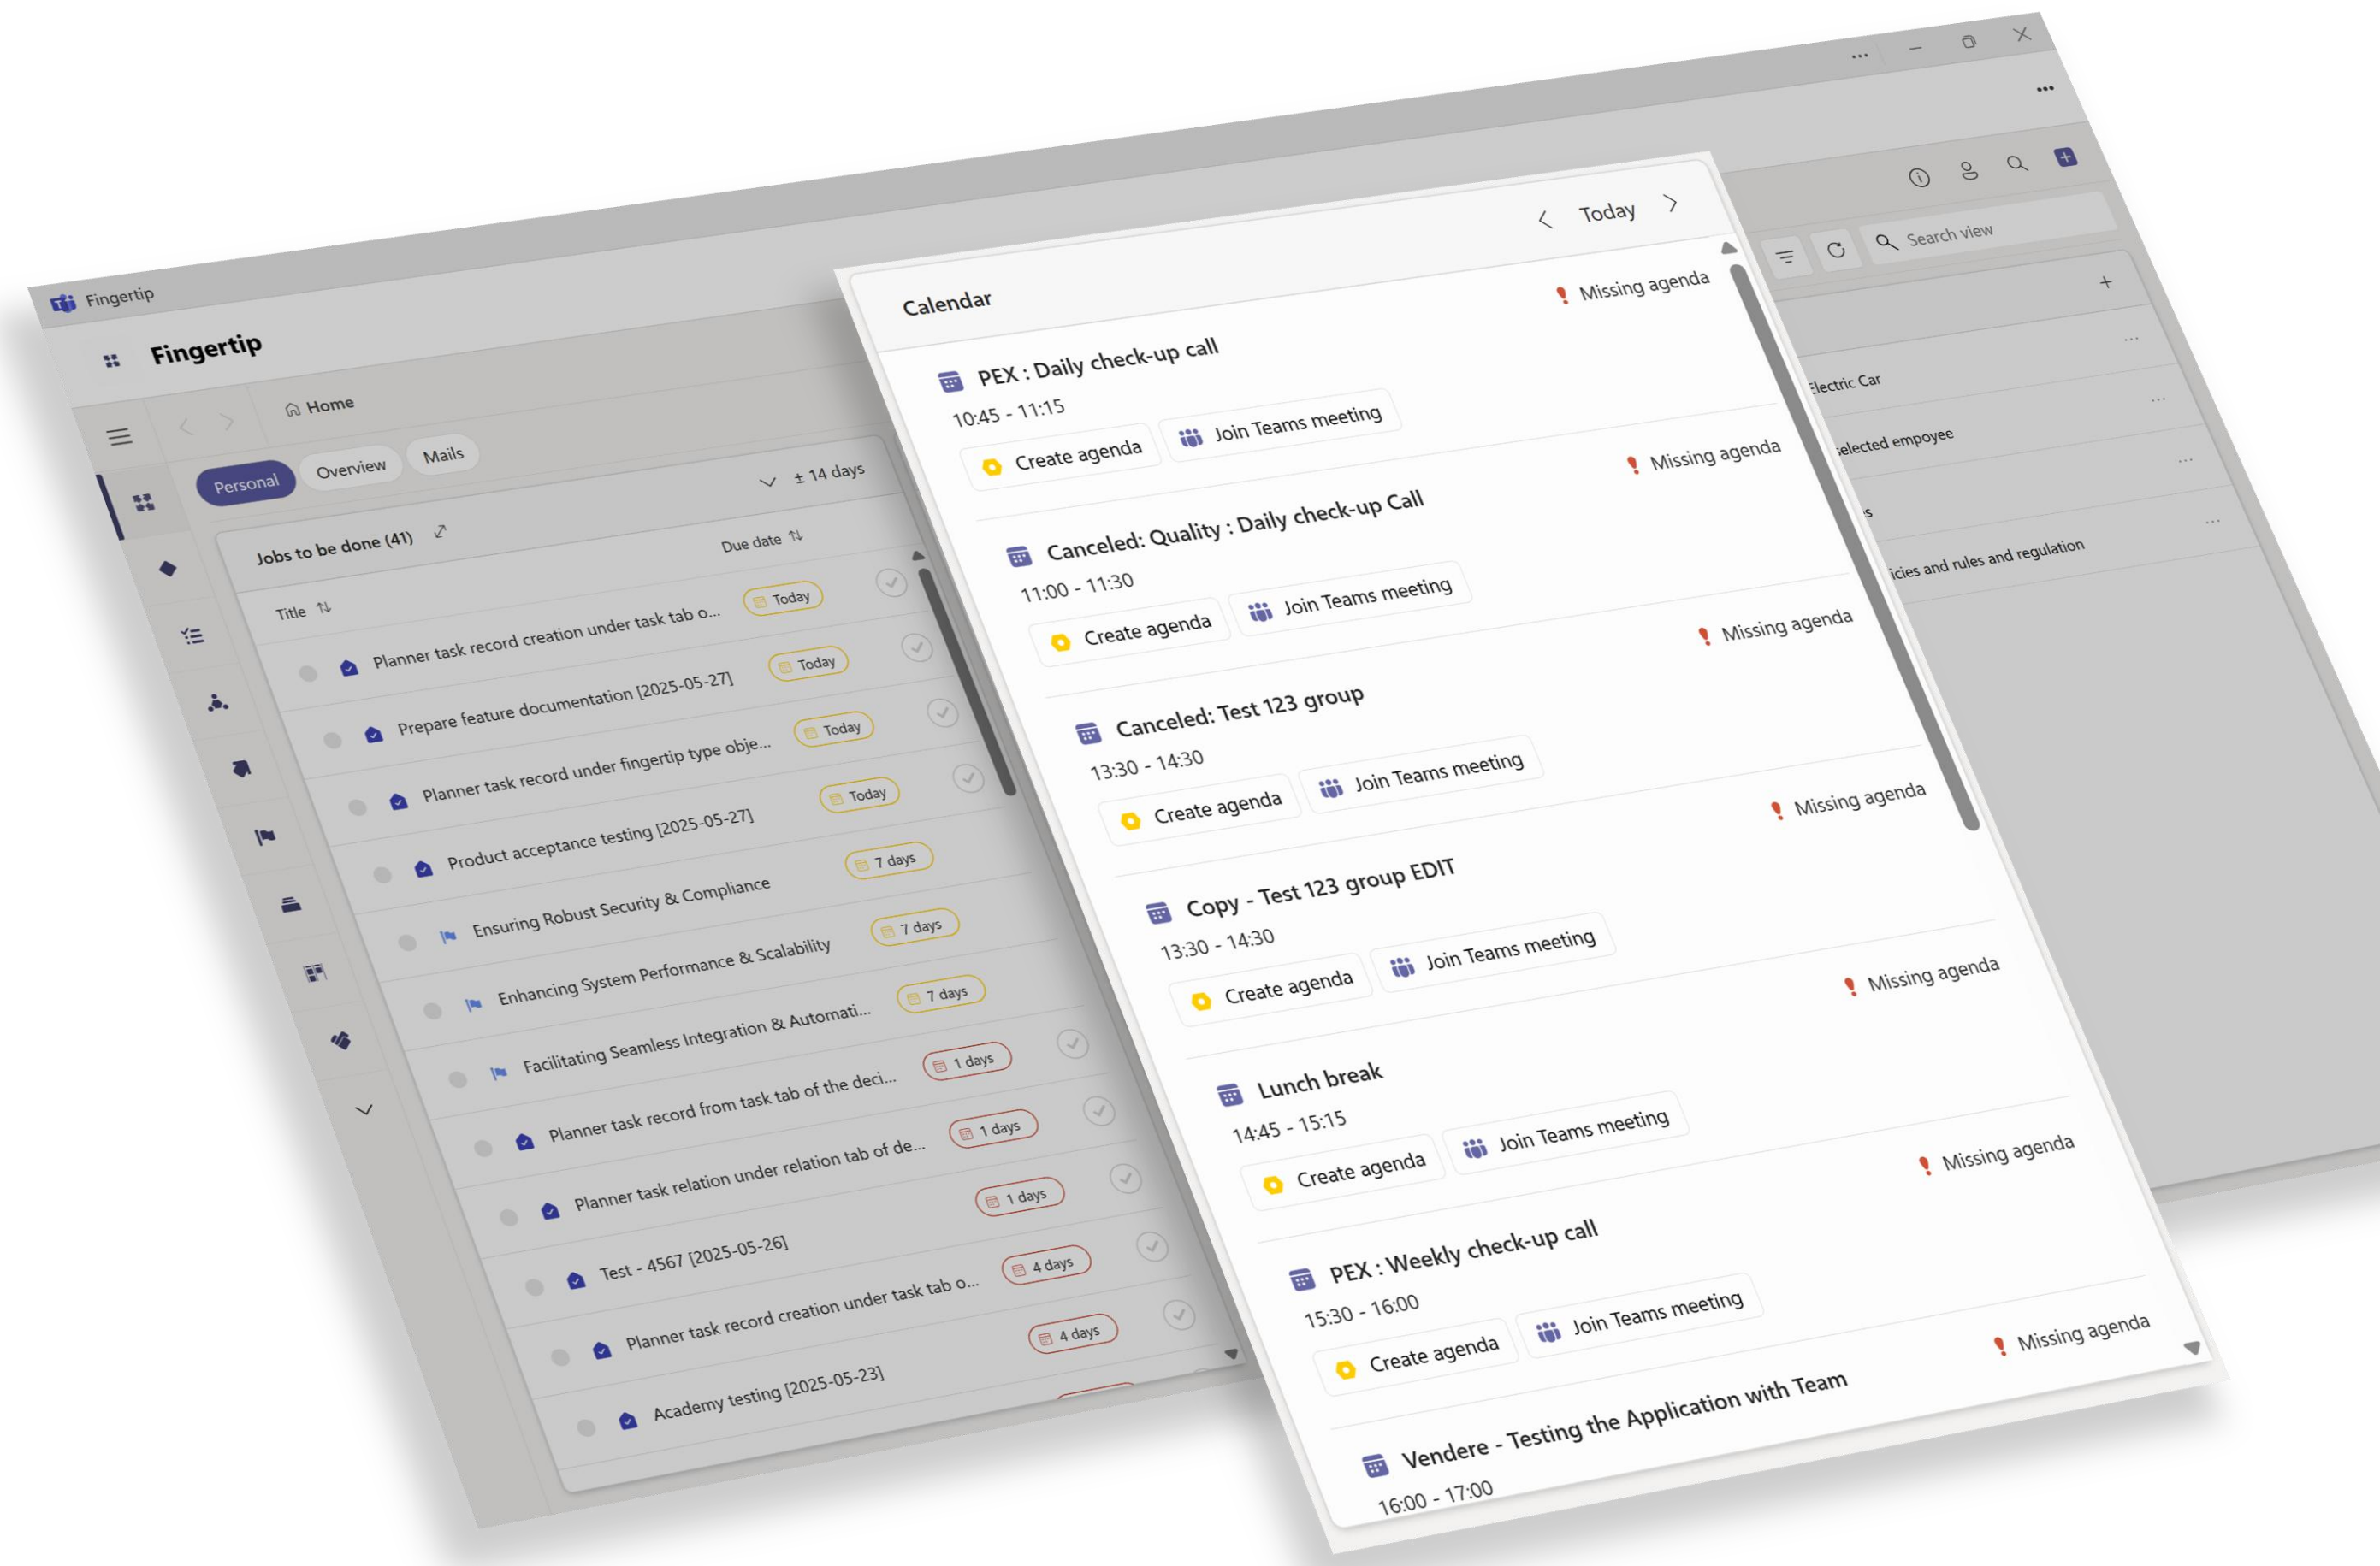

New calendar component

Collaboration without boundaries

The home screen now includes a calendar that shows upcoming meetings in one list. Each calendar item allows you to join Teams calls directly or add agendas with a single click—no need to open multiple windows or search for links.

By integrating scheduling tools directly into Fingertip, teams can stay on top of upcoming discussions and prepare efficiently. It's especially helpful for leaders and coordinators who need to review meetings, assign items, and ensure alignment before things begin multiple times per week, or even day.

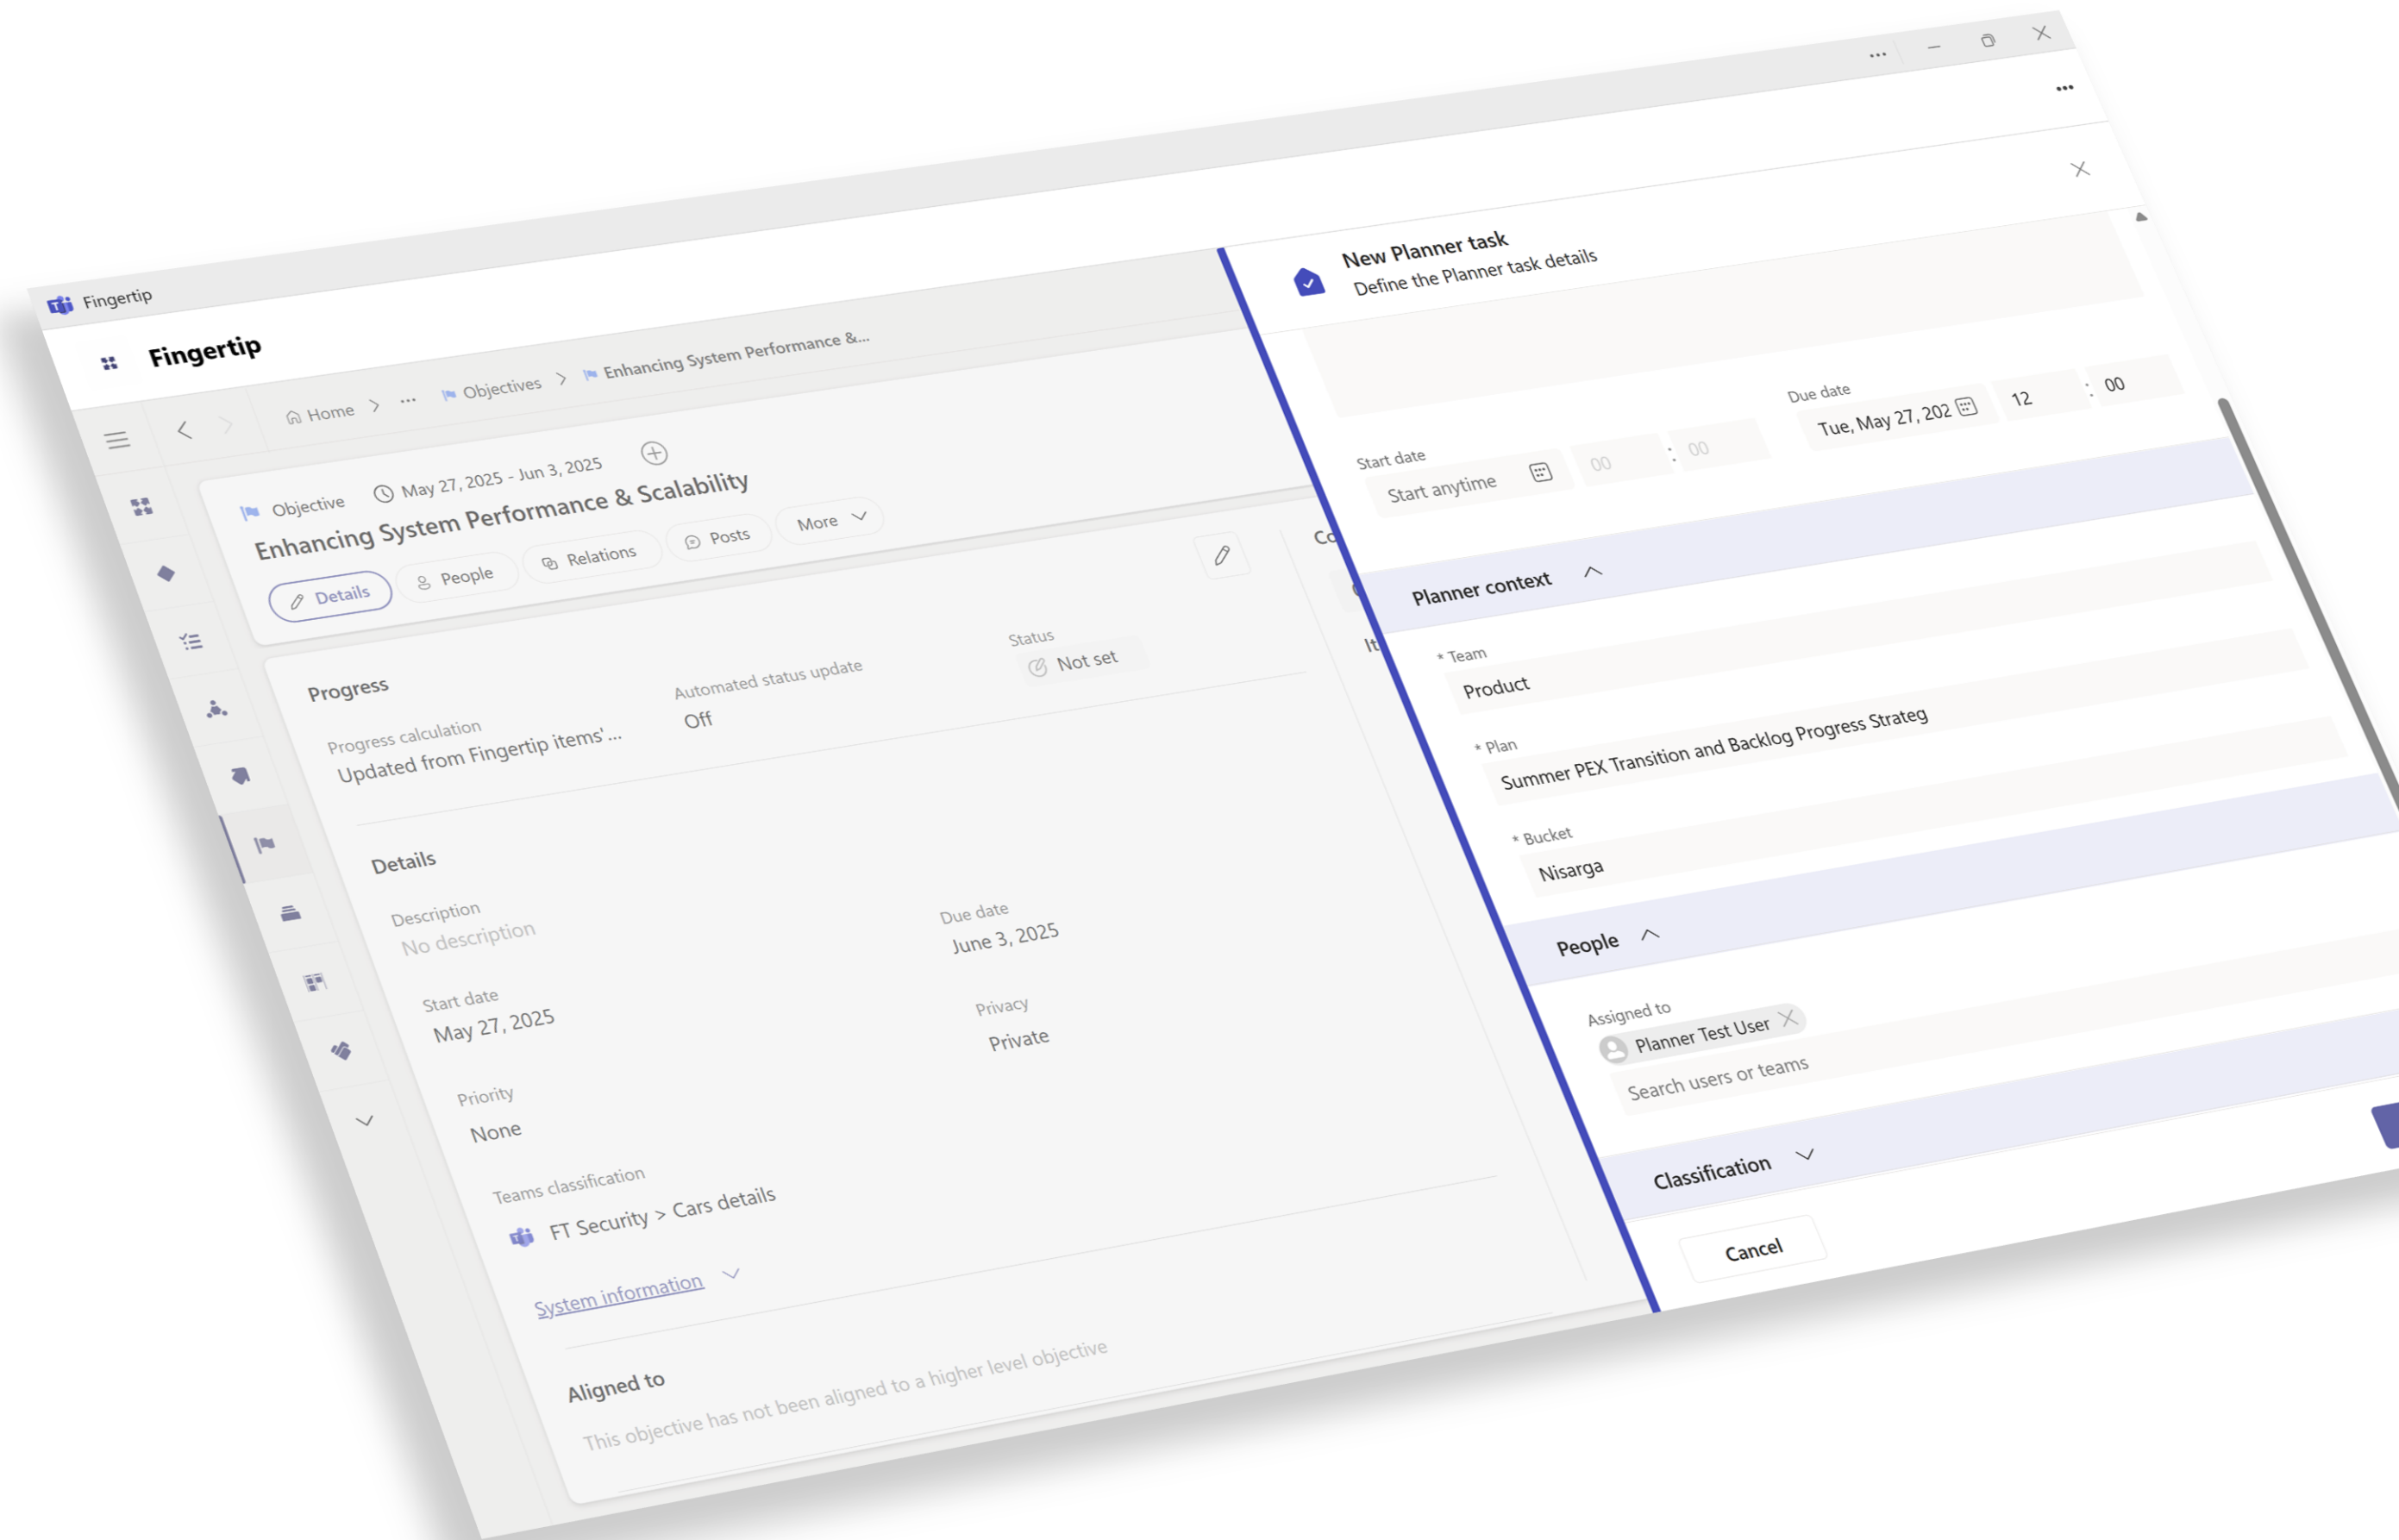

Planner tasks for all Microsoft Teams users

Streamline your tasks, achieve your goals

You can now assign **Planner tasks to people who don't use Fingertip**—such as external stakeholders or collaborators in Teams. These tasks still appear in your Fingertip workspace and can be linked to objectives, making them part of the full project plan.

Opening task assignment to a broader audience improves collaboration without sacrificing structure. It supports shared accountability and keeps progress visible across the entire team.

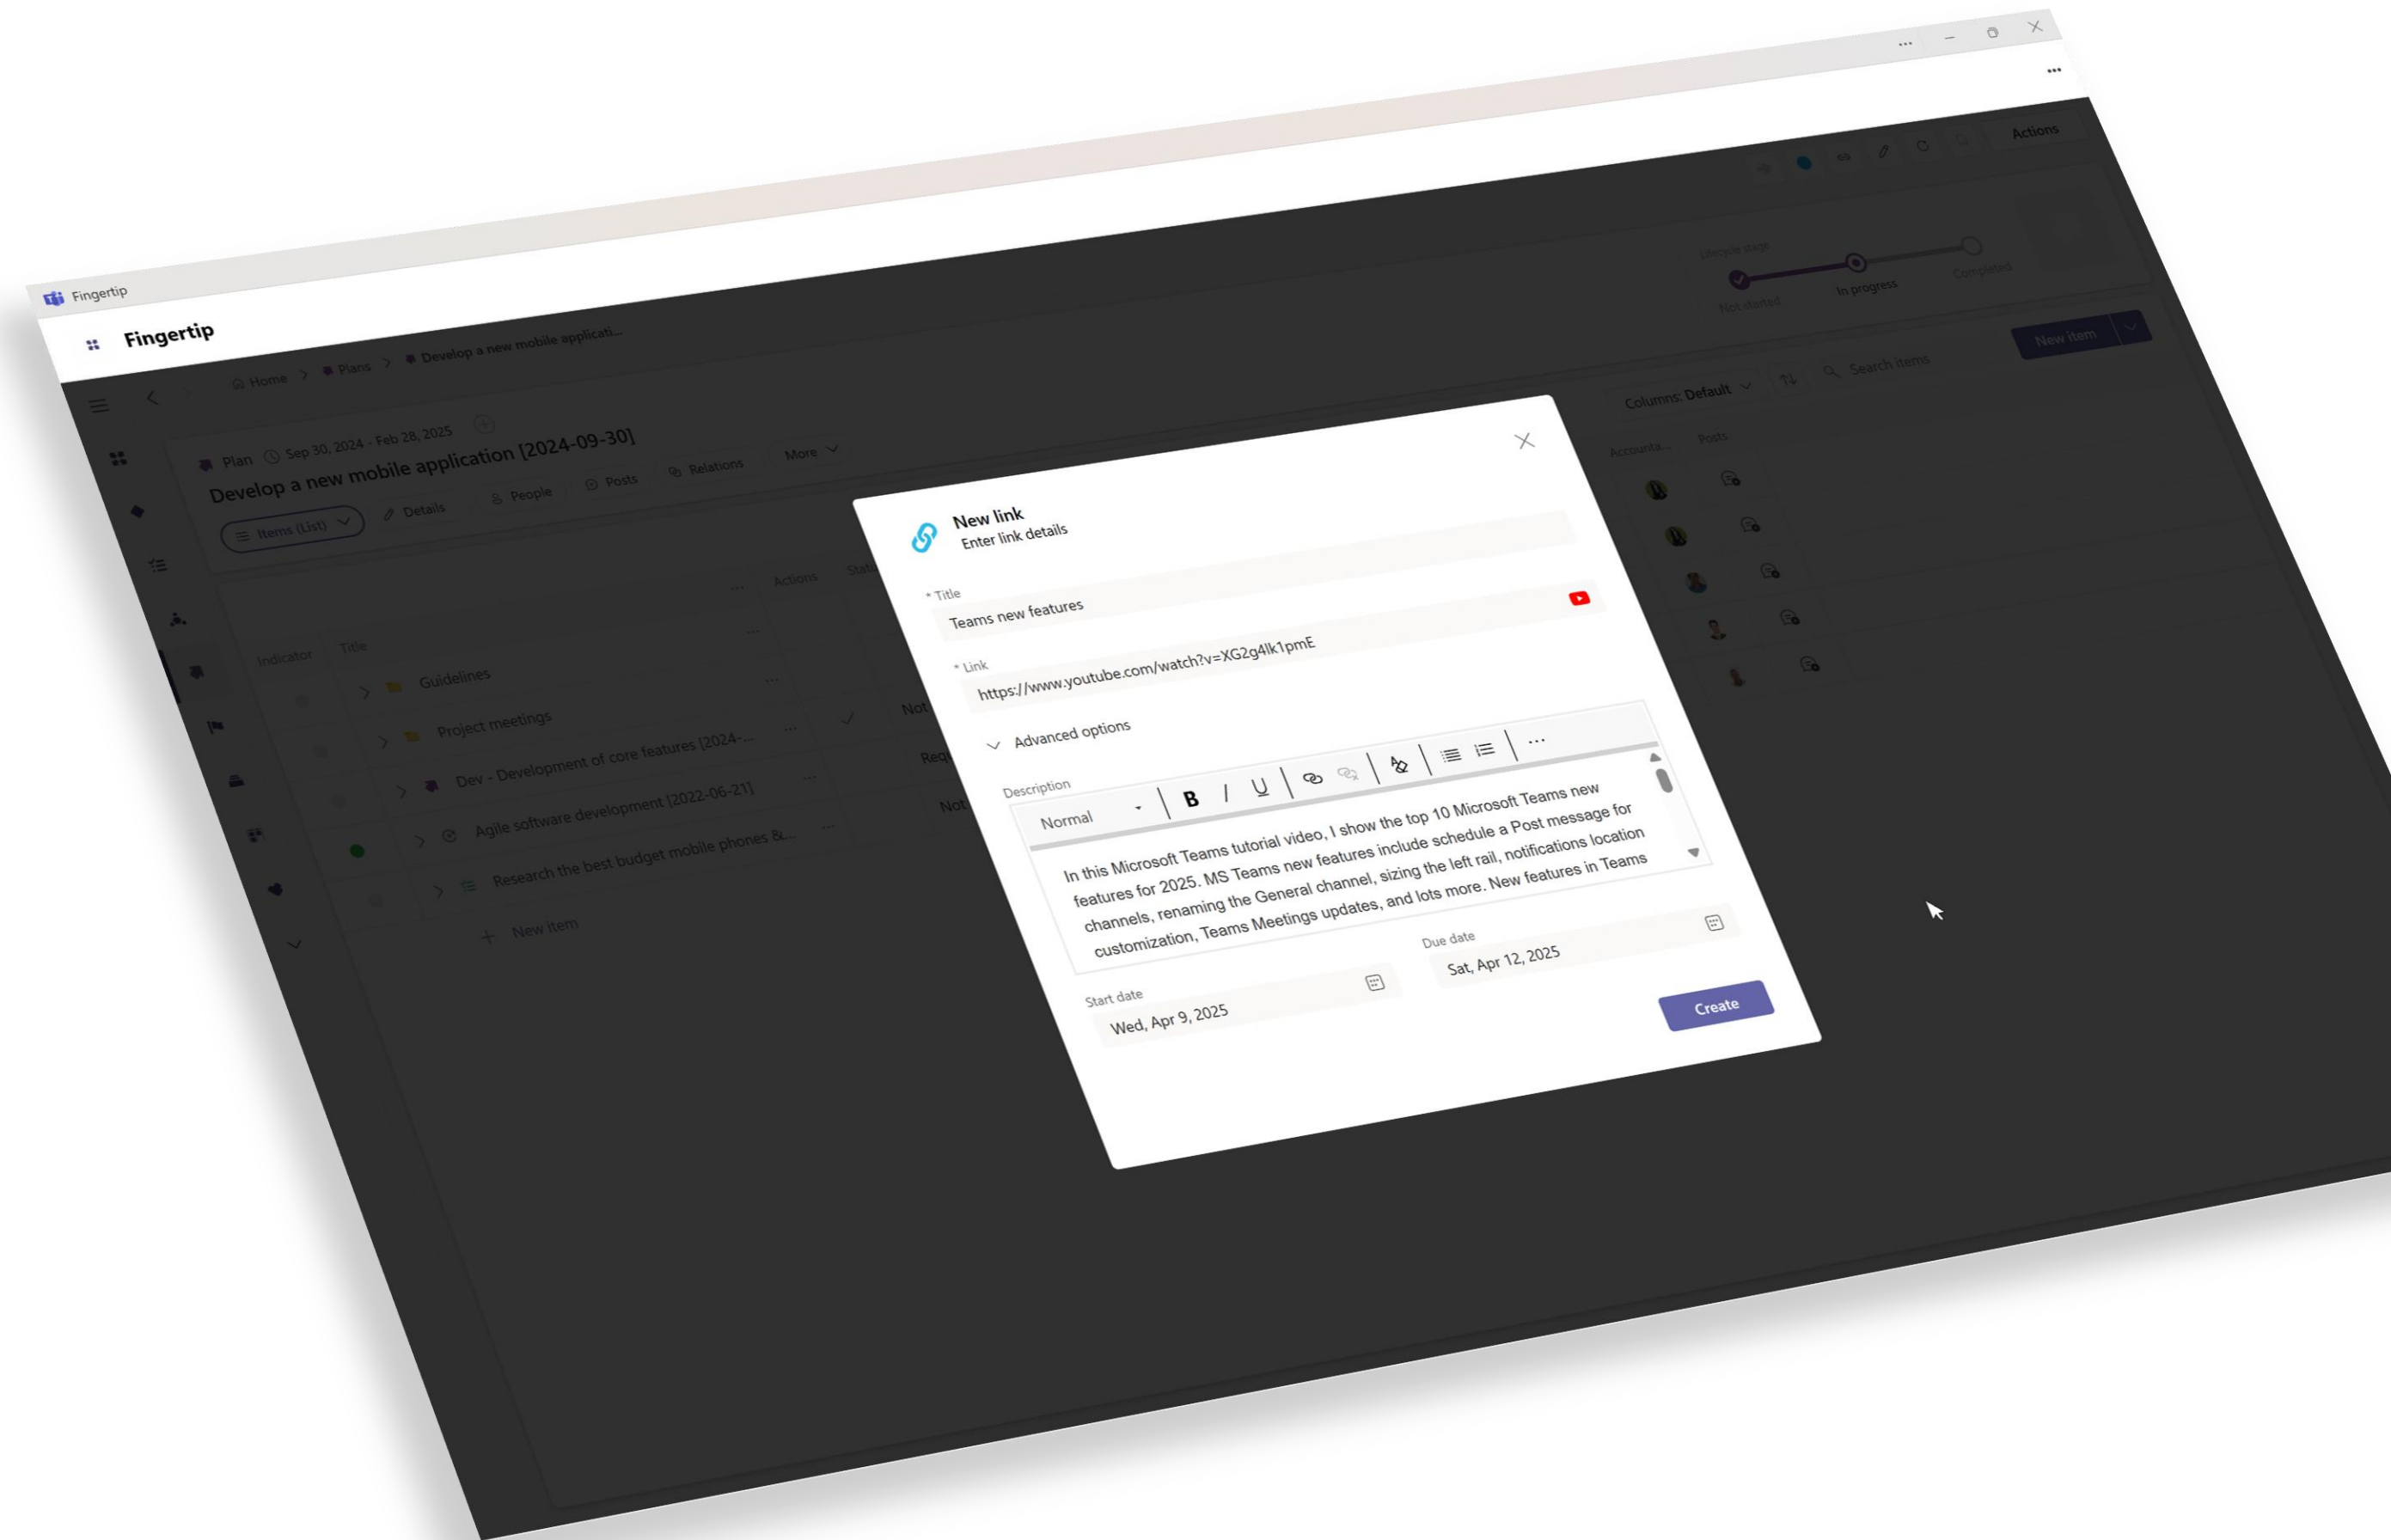

Enhanced link popup

Manage your links more effectively

In this iteration, we introduced a number of awaited updates to the link features in Fingertip. We've added plenty of icons based on the URL destination, try to add a link to YouTube for example!

Additionally, links now have a description field, as well as start and end dates, making sure those important and timely content reaches its intended audiences.

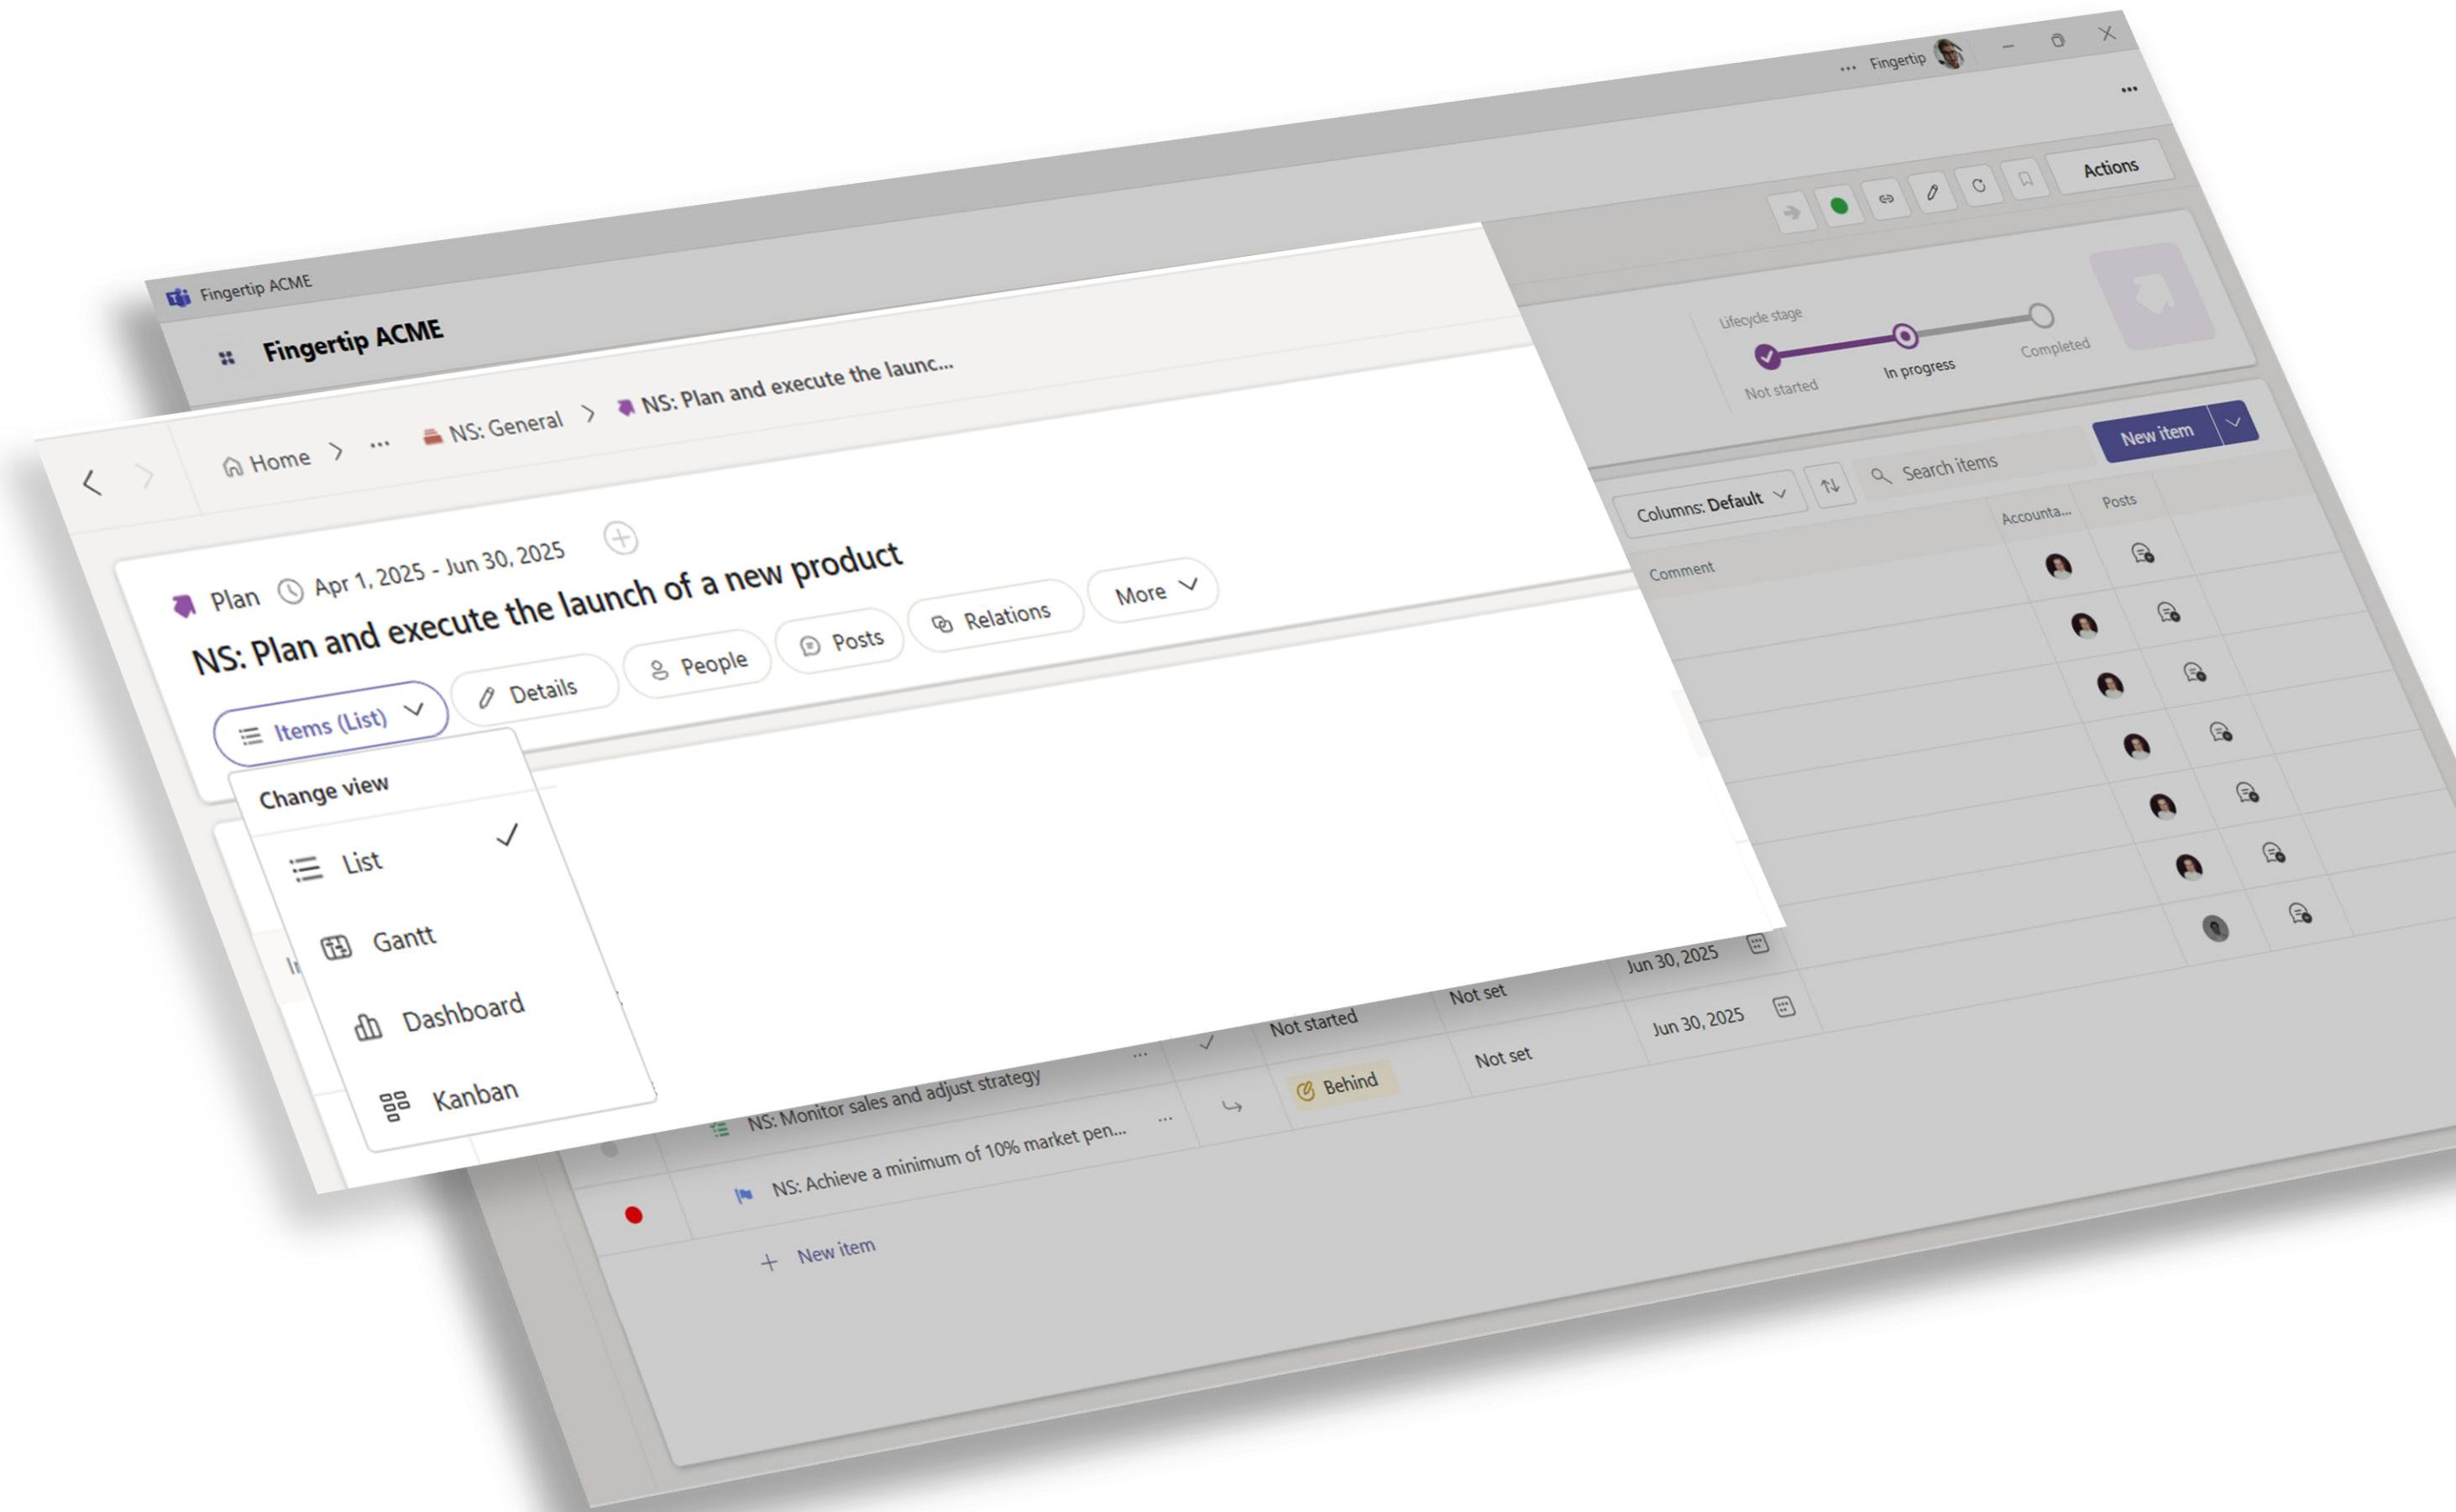

New UX for tabs and views for all activators

Find the information you are looking for – now much easier.

We have updated our activator navigation with a clearer, more intuitive interface to help users stay focused and in control. Key tabs are now placed as buttons in the header, giving quick access to essential project information and actions. All related views have also been unified under the first tab's dropdown, making the experience consistent across the app.

To further improve orientation, we've introduced a new breadcrumb navigation. This lightweight trail shows you exactly where you are - and lets you easily return to the context you came from. This makes it much easier to find your way without getting lost.

These changes make everyday navigation smoother, help users stay organized, and reduce the cognitive load of managing multiple items and projects.

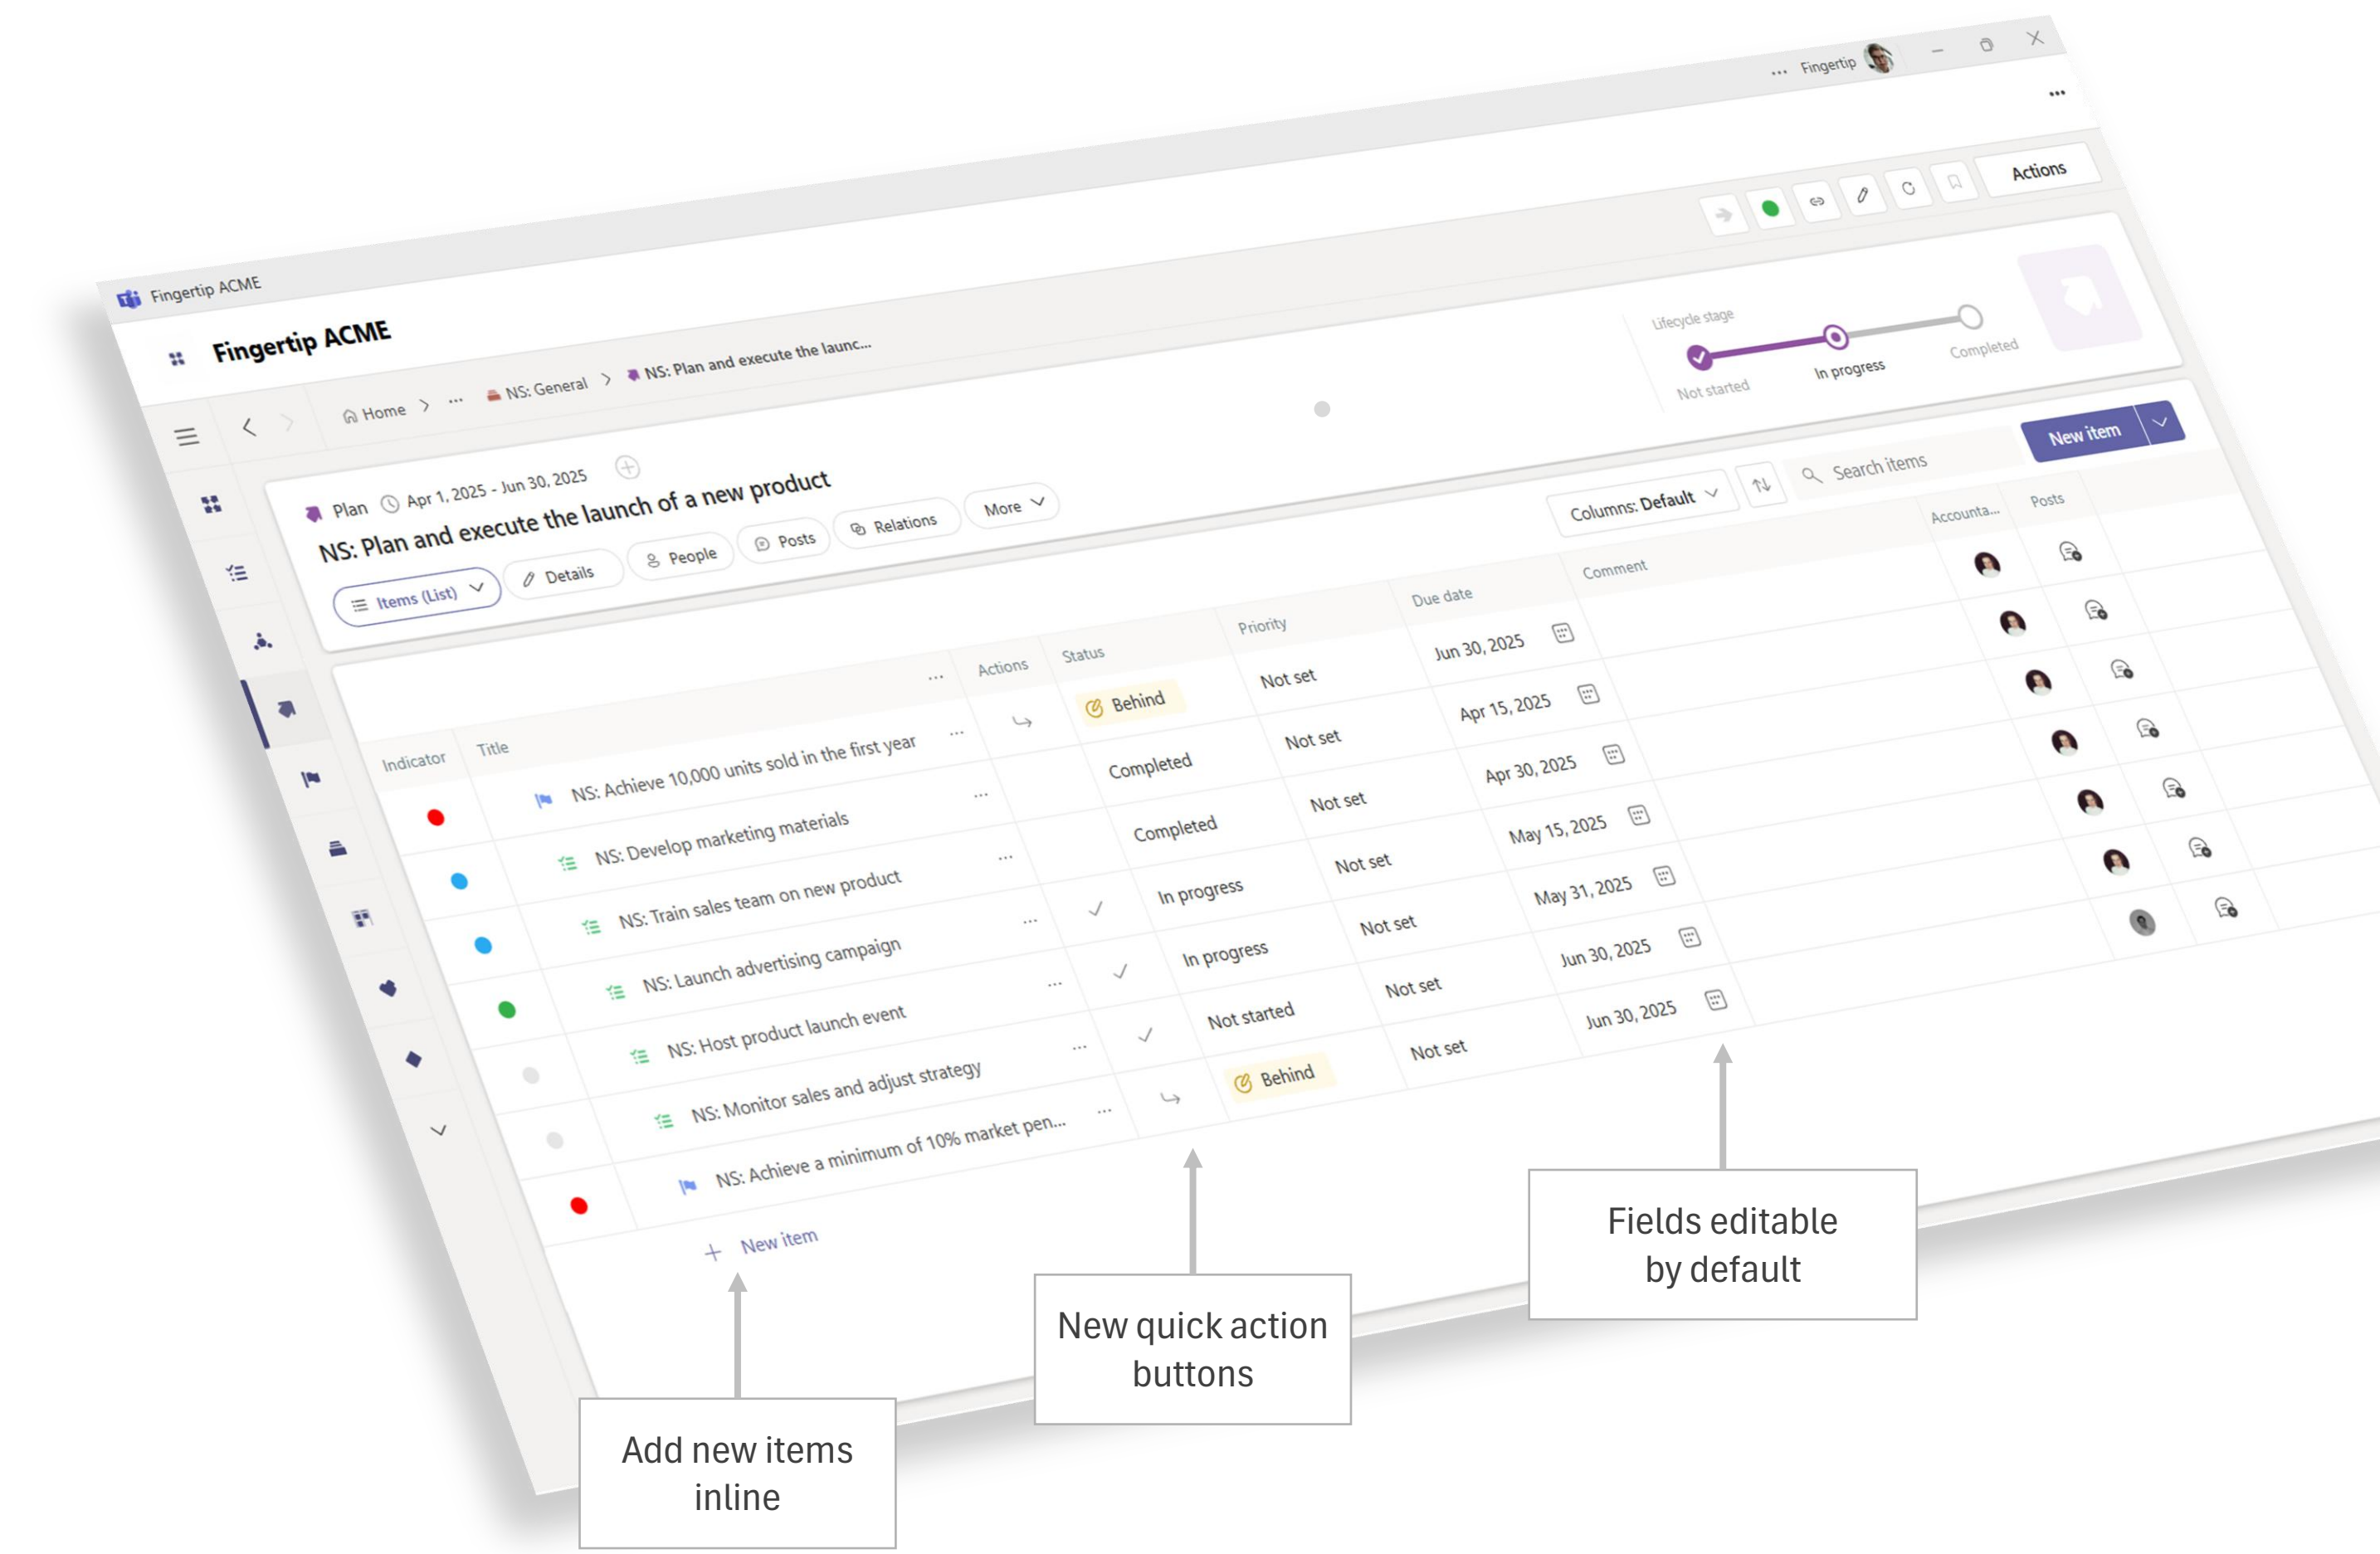

Renewed plan items tab

Enhancing productivity through intuitive task management

New plan item tab features inline editing by default, a new list layout with horizontal scrolling, and quick actions for streamlining work. These changes will enhance the user experience in project planning and execution, helping users focus more on the actual work.

Inline editing allows users to make changes directly in the plan list view, improving efficiency by reducing multiple clicks for each item.

Additionally, the quick actions feature streamlines Fingertip use by allowing users to complete suggested actions with minimal clicks, providing immediate feedback and keeping users engaged.

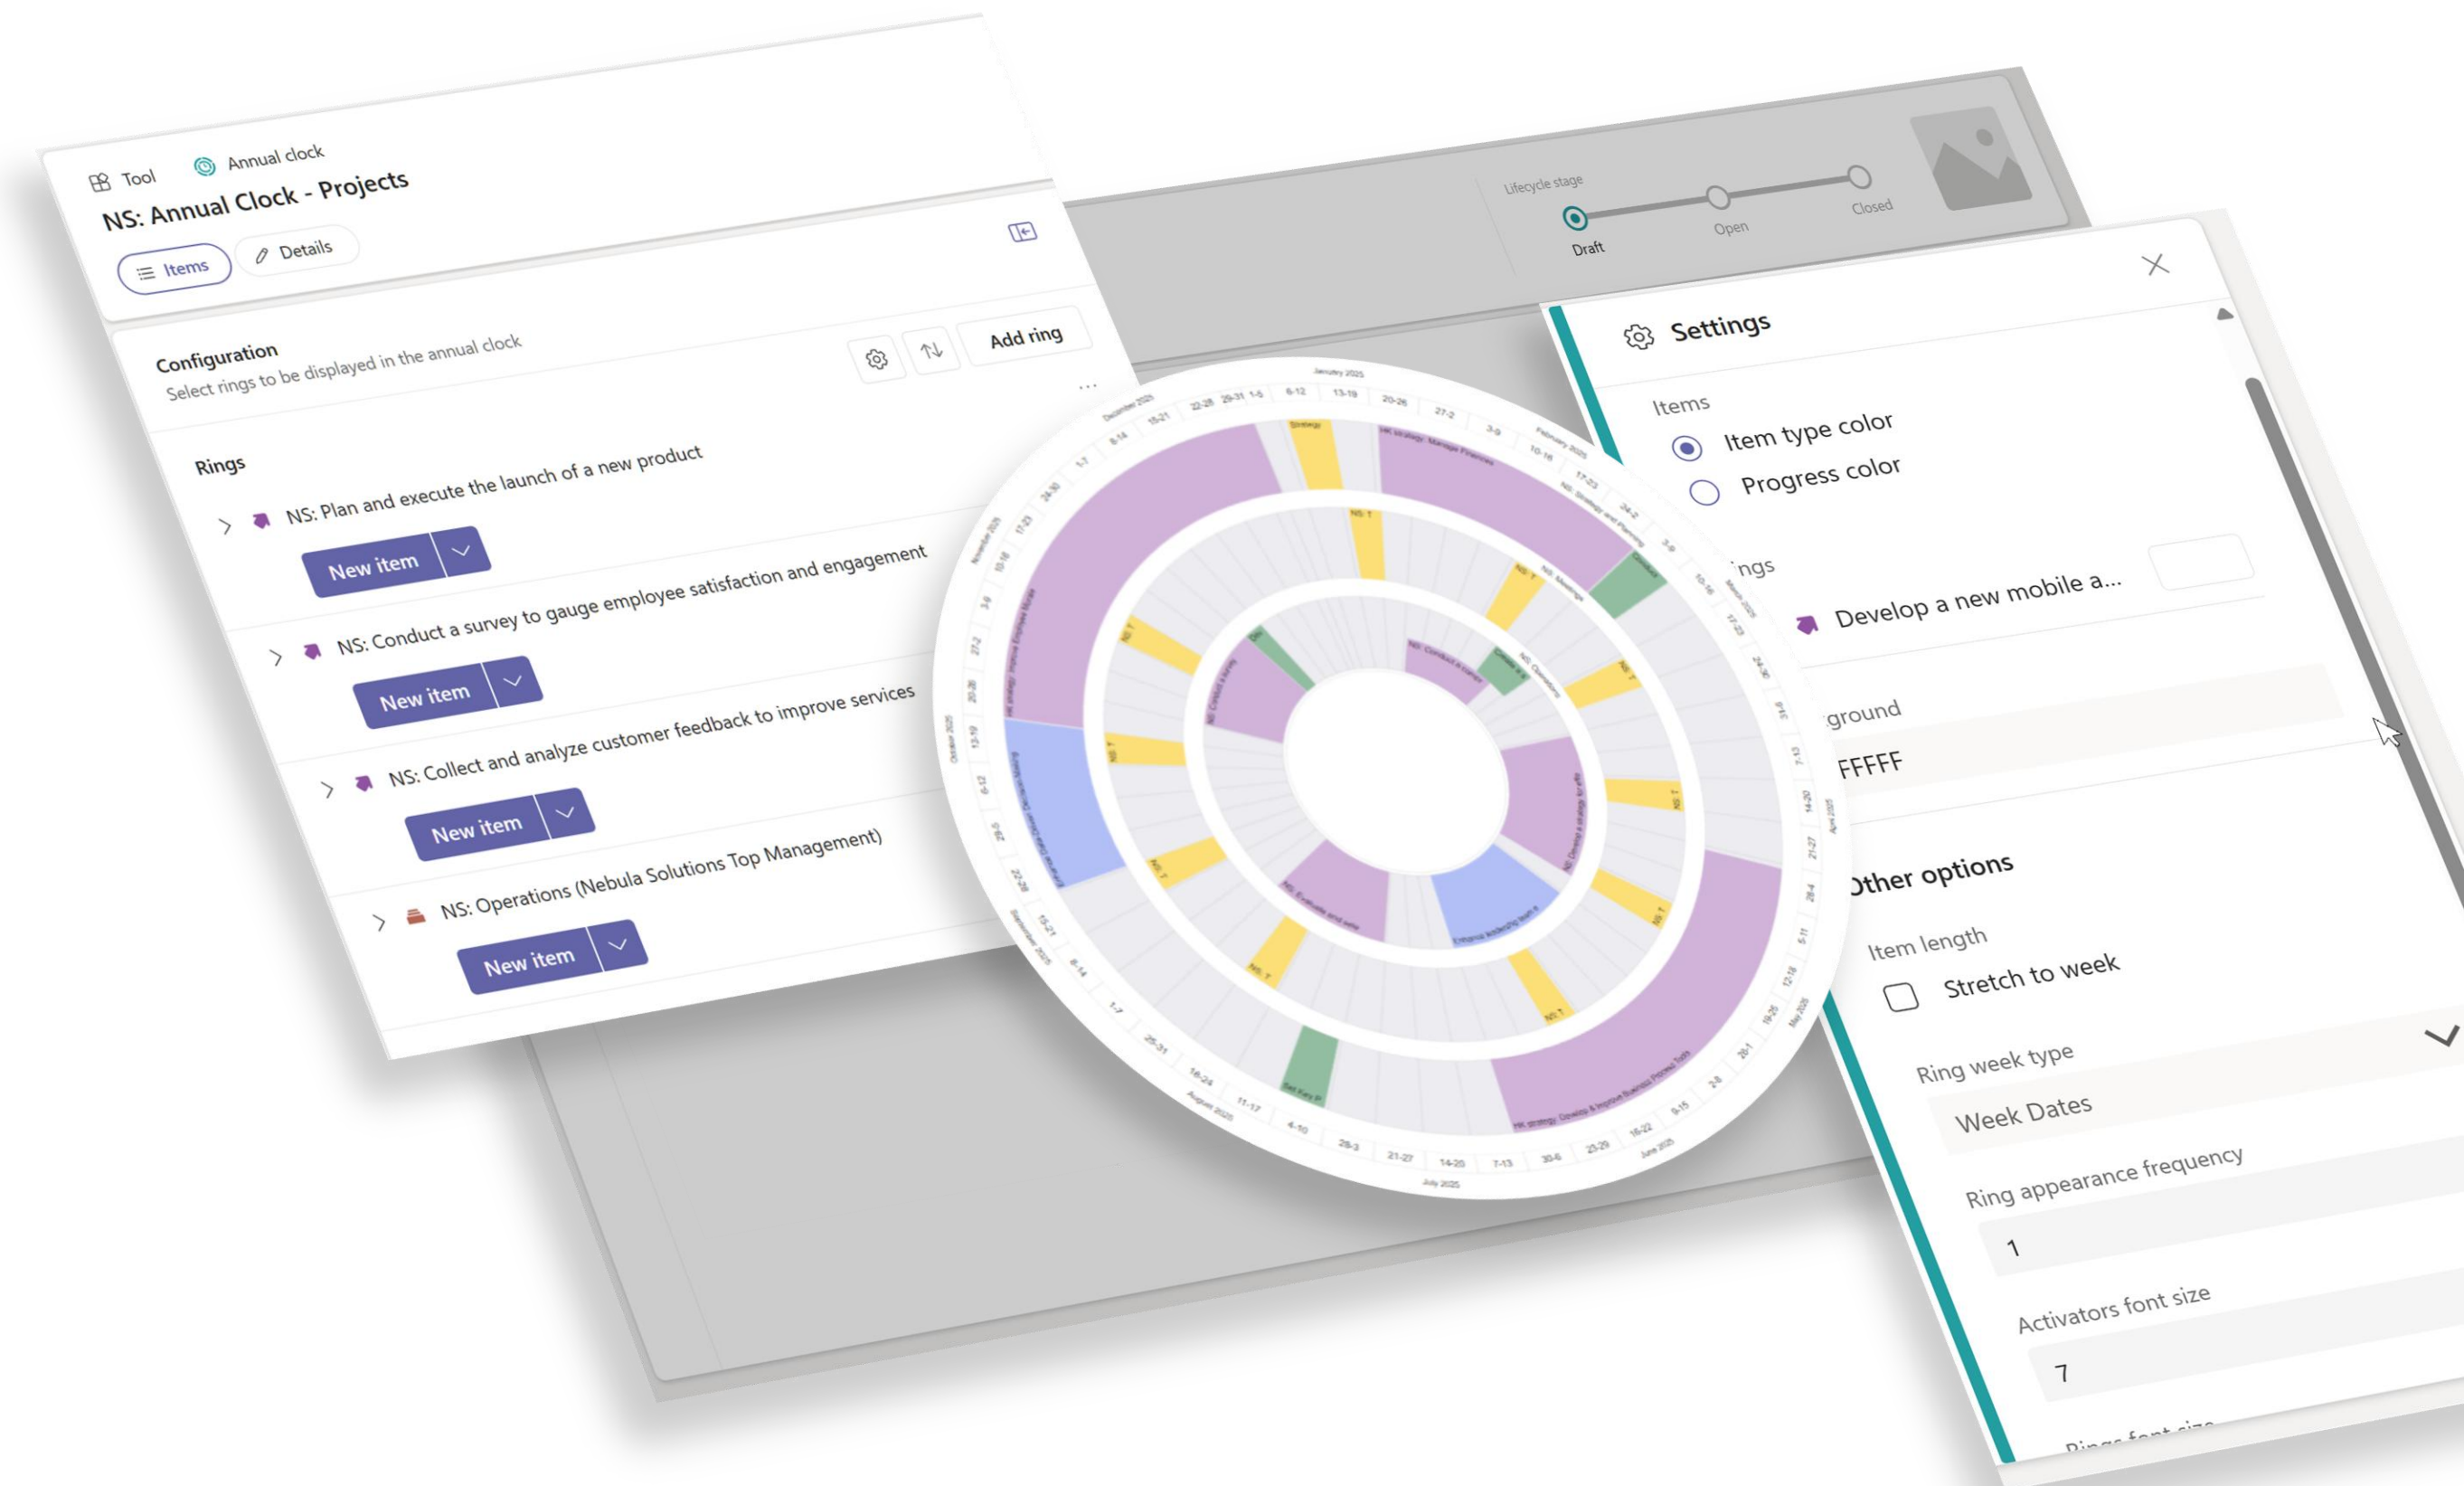

Annual clock enhancements

Plan the year your way with even more customization options, or start creating completely new action plans directly on the annual clock

We've improved the annual clock to give teams more control over how information is displayed. Users can now select which rings are visible, create new items directly on the clock view, and fine-tune how the visualization looks using a redesigned settings menu.

These updates make it easier to customize the clock for different planning needs—whether you're aligning company-wide milestones or managing a single team's schedule. The improved interface helps teams stay focused by showing only what's relevant, when it's needed.

Gain the situational upper hand with Fingertip's Sunburst

New and improved Sunburst helps you find information faster, while gaining insights into bigger picture

Fingertip's Sunburst provides a clear and interactive way to visualize status and progress hierarchical data in a sleek visual way. It visually represents the relations between items of a collection or a plan and is easy to navigate, helping you find the items you are looking for.

It's intuitive to use with various customization options and helps communicate progress efficiently to involved people, creating situational awareness.

The Sunburst has gained:

- An extra ring to display more related items on first glance
- Better navigation through the complete hierarchy
- Tooltips on items that appear on hover
- Icons that help discern between different types of items
- We are also working on other, massive changes that will arrive within the minor updates leading up to the next major release!

New Fingertip 4.3 – Release summary

	 General	 Decision / Approval	 Task / Planner	 Objective	 Plan	 Meeting	 Collection / channel	 Kanban	 Tools
NEW	<ul style="list-style-type: none">• Browse and add recent Teams files from “Add file” sidebar• Global search of items in “Add item” sidebar• New “Activity” tab in profile screen (BETA)• New main menu layout (BETA)	<ul style="list-style-type: none">• Renewed decision list for easier responses	<ul style="list-style-type: none">• Ability to assign Planner tasks to non-Fingertip users	<ul style="list-style-type: none">• Measure objectives by Planner tasks	<ul style="list-style-type: none">• Tools (annual clock, sunburst, etc.) available as Plan item tabs	<ul style="list-style-type: none">• New “calendar” component to create Fingertip meetings for existing Teams events			<ul style="list-style-type: none">• New annual clock settings menu (BETA)
IMPROVED	<ul style="list-style-type: none">• Improved load time of the home screen• Expandable Gantt items to view child items’ length• Expandable rich text fields in all screens	<ul style="list-style-type: none">• Option to create instant approvals as drafts• Option to reject instant approvals	<ul style="list-style-type: none">• Opening Planner plans inside plans / collections loads faster	<ul style="list-style-type: none">• Objective status “Fingertip item” and “not completed / completed” updates automatically			<ul style="list-style-type: none">• Added the ability to add existing collections in collections or plans		<ul style="list-style-type: none">• Network chart displays more relations and related people
FIXED	<ul style="list-style-type: none">• Fixed issues using the app in "Finnish" system / Teams locale• Fixed several places where translation to Finnish language was missing• Fixed several bugs in “Change accountable” feature		<ul style="list-style-type: none">• Fixed an issue where multiple unnecessary relations appear in Planner task relations• Fixed an issue where Planner plans / teams were sorted incorrectly• Fixed various errors that occurred when creating a Planner task with invalid dates		<ul style="list-style-type: none">• Fixed an issue where items may get duplicated in the Gantt chart• Fixed an issue where the "Accountable" column was empty for plan items list• Fixed an issue where refreshing a Planner plan went into endless loading loop	<ul style="list-style-type: none">• Fixed the “Join Teams meeting” button from home screen	<ul style="list-style-type: none">• Fixed an issue where items may get duplicated in the Gantt chart• Fixed issues where newly created tool does not appear in collection / plan without a manual refresh	<ul style="list-style-type: none">• Fixed an error that occurred when creating a new Kanban from inside a plan	<ul style="list-style-type: none">• Fixed an issue where Teams classification / ARI does not get inherited for new ring items in annual clock
