Fingertip 4.5 – Highlights

Fingertip 4.5 brings leadership work to a new level of ease and rhythm.

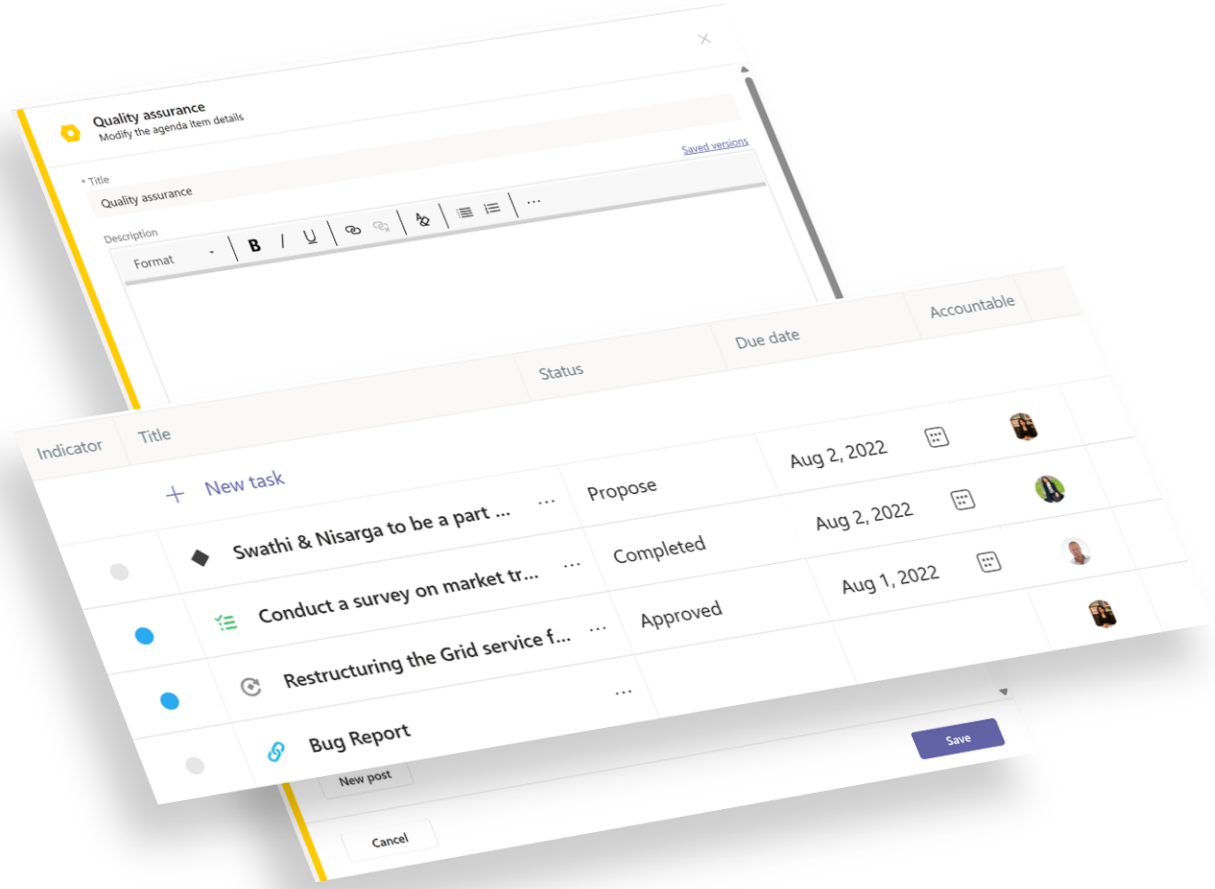

As the operating system for modern leadership, Fingertip connects people, information, and action into one clear flow. One common focus is behind all the latest updates: helping leaders move naturally from insight to action without friction.

From faster performance to clearer approvals and smarter planning tools, Fingertip 4.5 is smoother, lighter, and more connected than ever. These improvements are built together with our customers, whose ideas and experiences continue to shape how digital leadership evolves in practice.

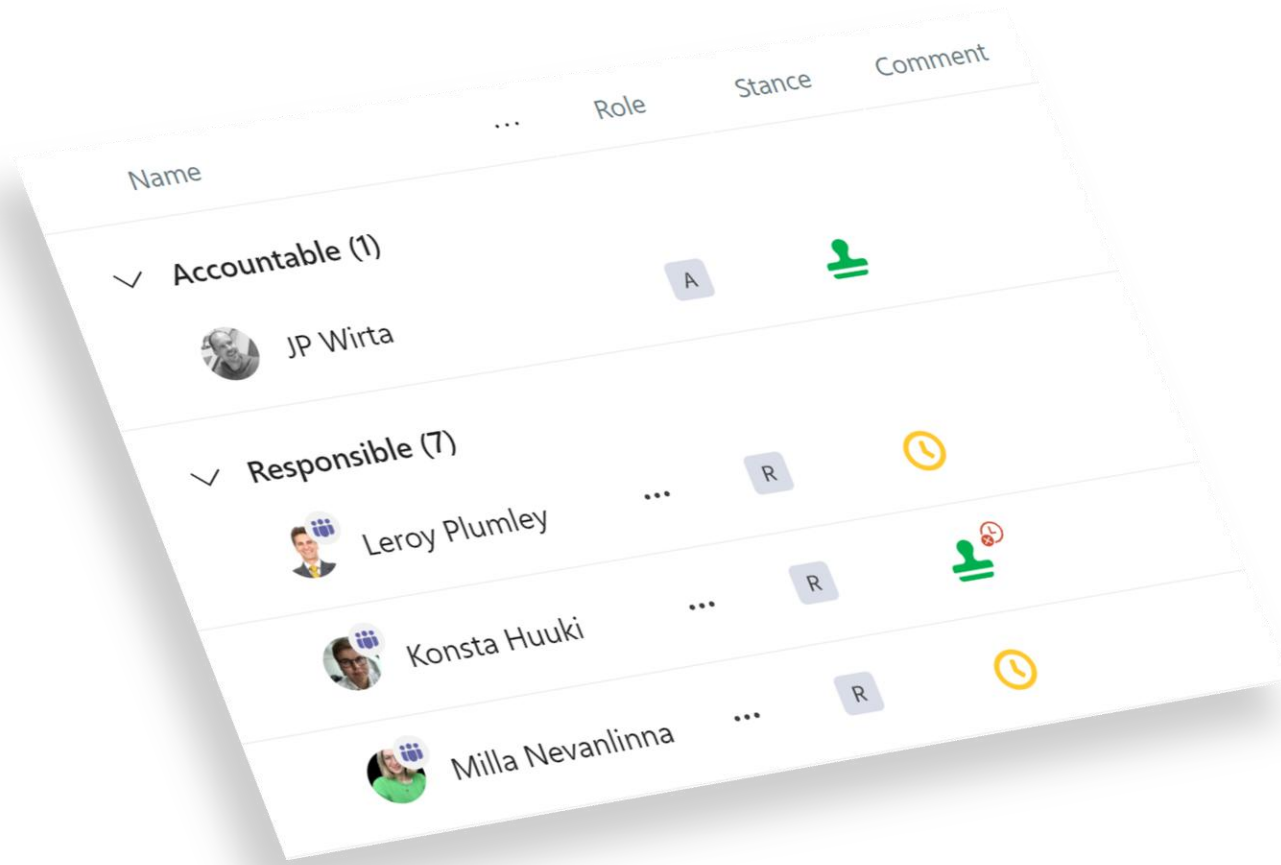

Leadership becomes effortless when information, decisions, and execution stay in sync, and that is exactly what this release delivers.

Here are some key features to support your leadership flow in Fingertip 4.5:

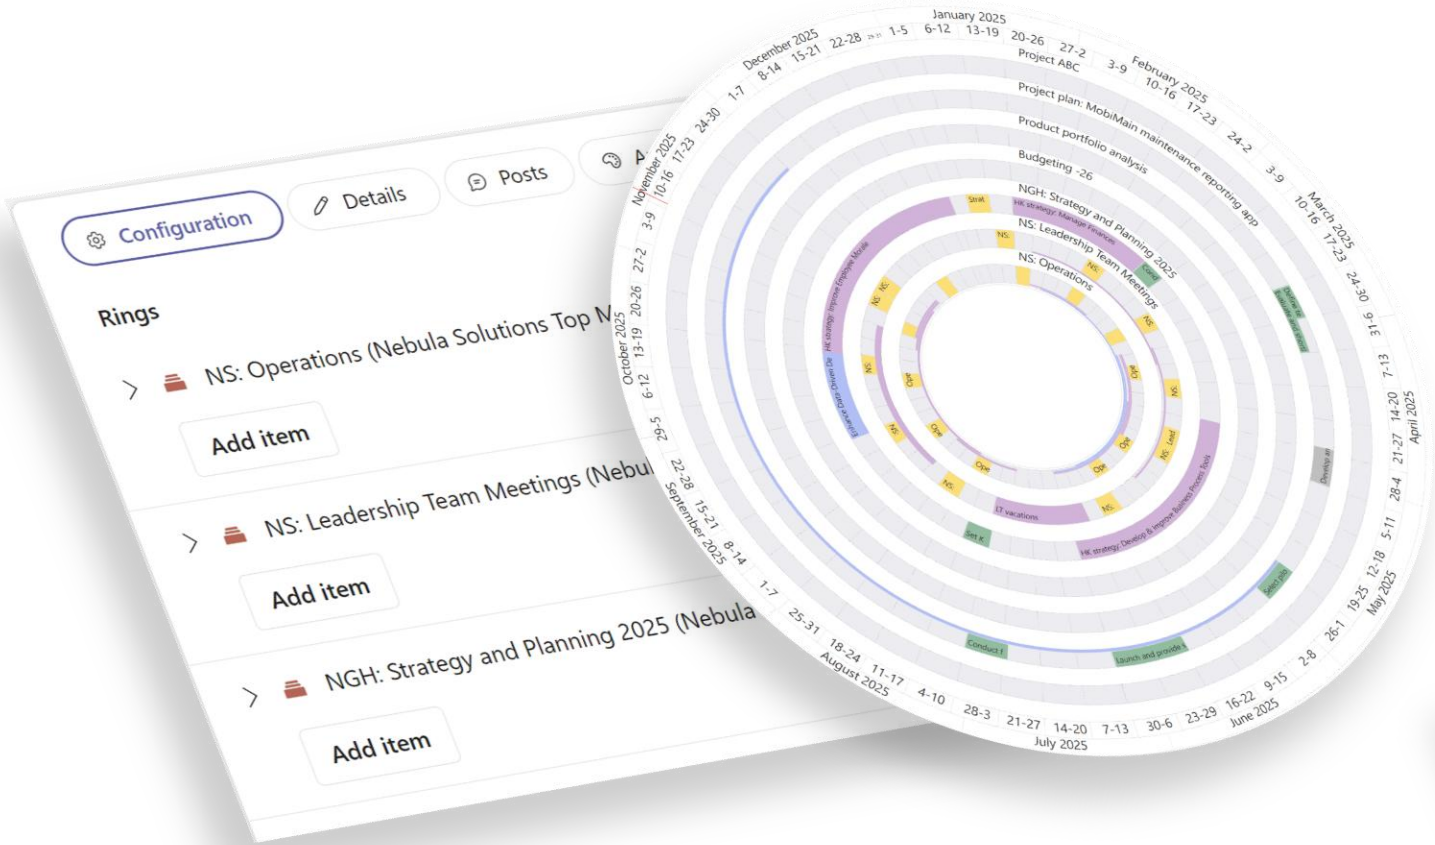

- 1. Create and edit tasks directly inside **Meeting agendas** to capture actions instantly.
- 2. Manage **Approvals** with new people lists, visible roles, and clearer decision histories.
- 3. View more rings and Outlook calendar events inside the updated **Annual Clocks**, with completely re-imagined configuration.
- 4. Customize **Kanbans** with flexible rows and columns using ready-made templates.

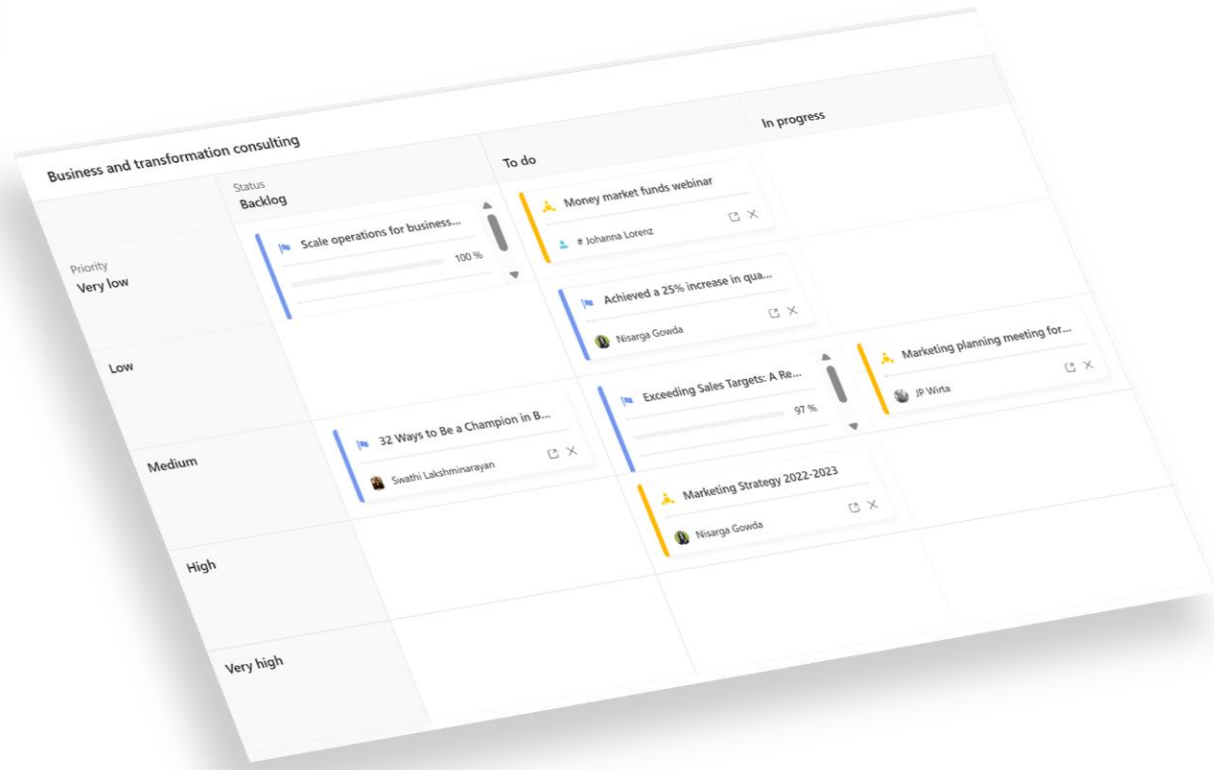

1. Improved agenda items

2. Clarity and accountability captured in every decision

3. Plan your year in one connected timeline with annual clocks

4. Visualize and align work effortlessly with Kanbans

New Fingertip 4.5 – Release summary

	 General	 Decision / Approval	 Task / Planner	 Objective	 Plan	 Meeting	 Collection / channel	 Kanban	 Tools

Improved approvals experience

Clarity in people, process, and history

Approvals have been redesigned to make decision-making faster and more transparent. A new **People list** makes it easy to see who is involved, what their roles and stances are, and how decisions progress across the team. Grouping participants by role or stance ensures everyone understands responsibilities and expectations.

The **final approval and comments** section is also improved, so the reasoning behind each decision remains visible and easy to follow. Together with the enhanced **History** tab, users can trace every step of the approval process, review comments, and understand context without losing time.

These updates create a simpler, more intuitive flow for decision making, helping teams move from proposal to approval with greater confidence, transparency, and speed.

Annual clock and tools redesign

Plan the year your way, with more flexibility, clarity, and control

The annual clock and other visualization tools have been completely refreshed with a clearer, more intuitive layout.

Configuration, now in the sidebar, has been completely remade, giving more space for the visualization itself.

You can **customize and save** appearance settings per user and per view, search for annual clock items instantly within it, and display even more details by hovering directly over the rings.

The annual clock now also supports **more rings** for complex schedules and automatically adapts to your screen. Together these updates make long-term planning smoother, faster, and more insightful, giving leaders a clear overview of the year.

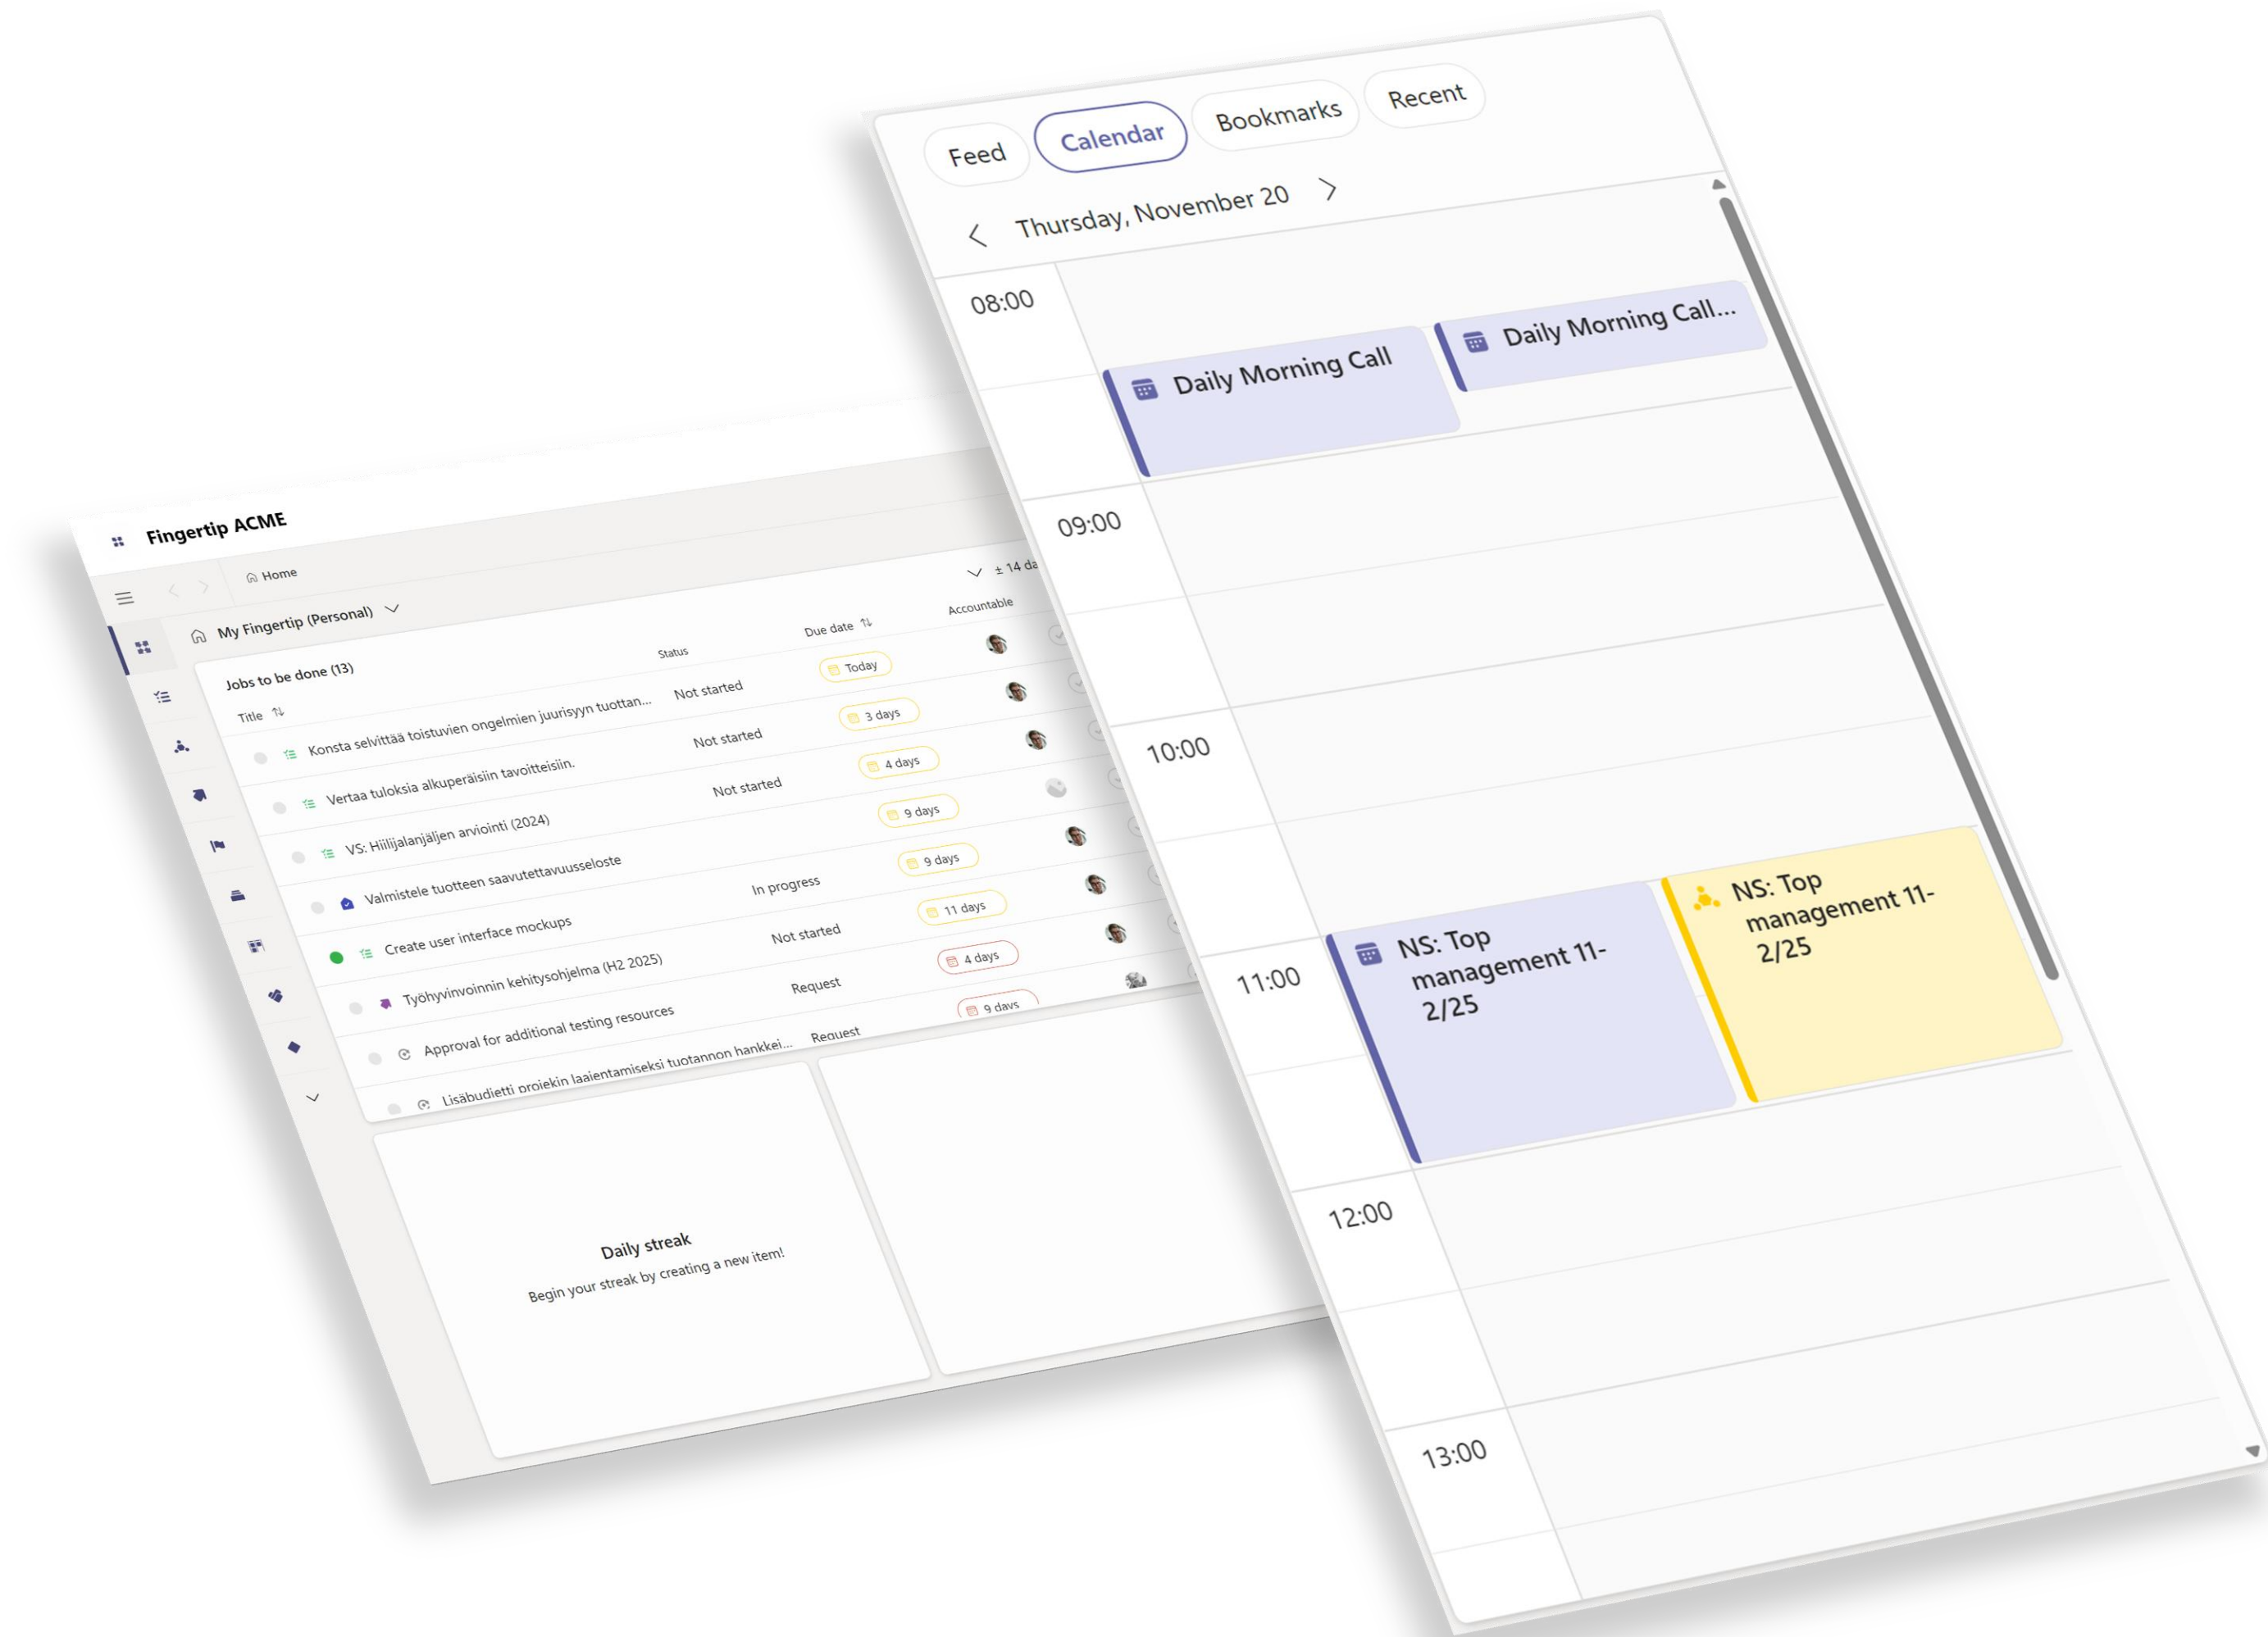

New Calendar component in home page

Streamline your schedule, stay on top of your commitments.

Having all the upcoming meetings and events displayed in a **calendar view** makes it easier for users to see **what's coming up** and **plan their schedules** accordingly. This can help them stay on top of their commitments and avoid conflicts.

Overall, the new calendar component can be a valuable addition to the home page, providing end users with a centralized and intuitive way to manage their schedules and collaborate more effectively within the application.

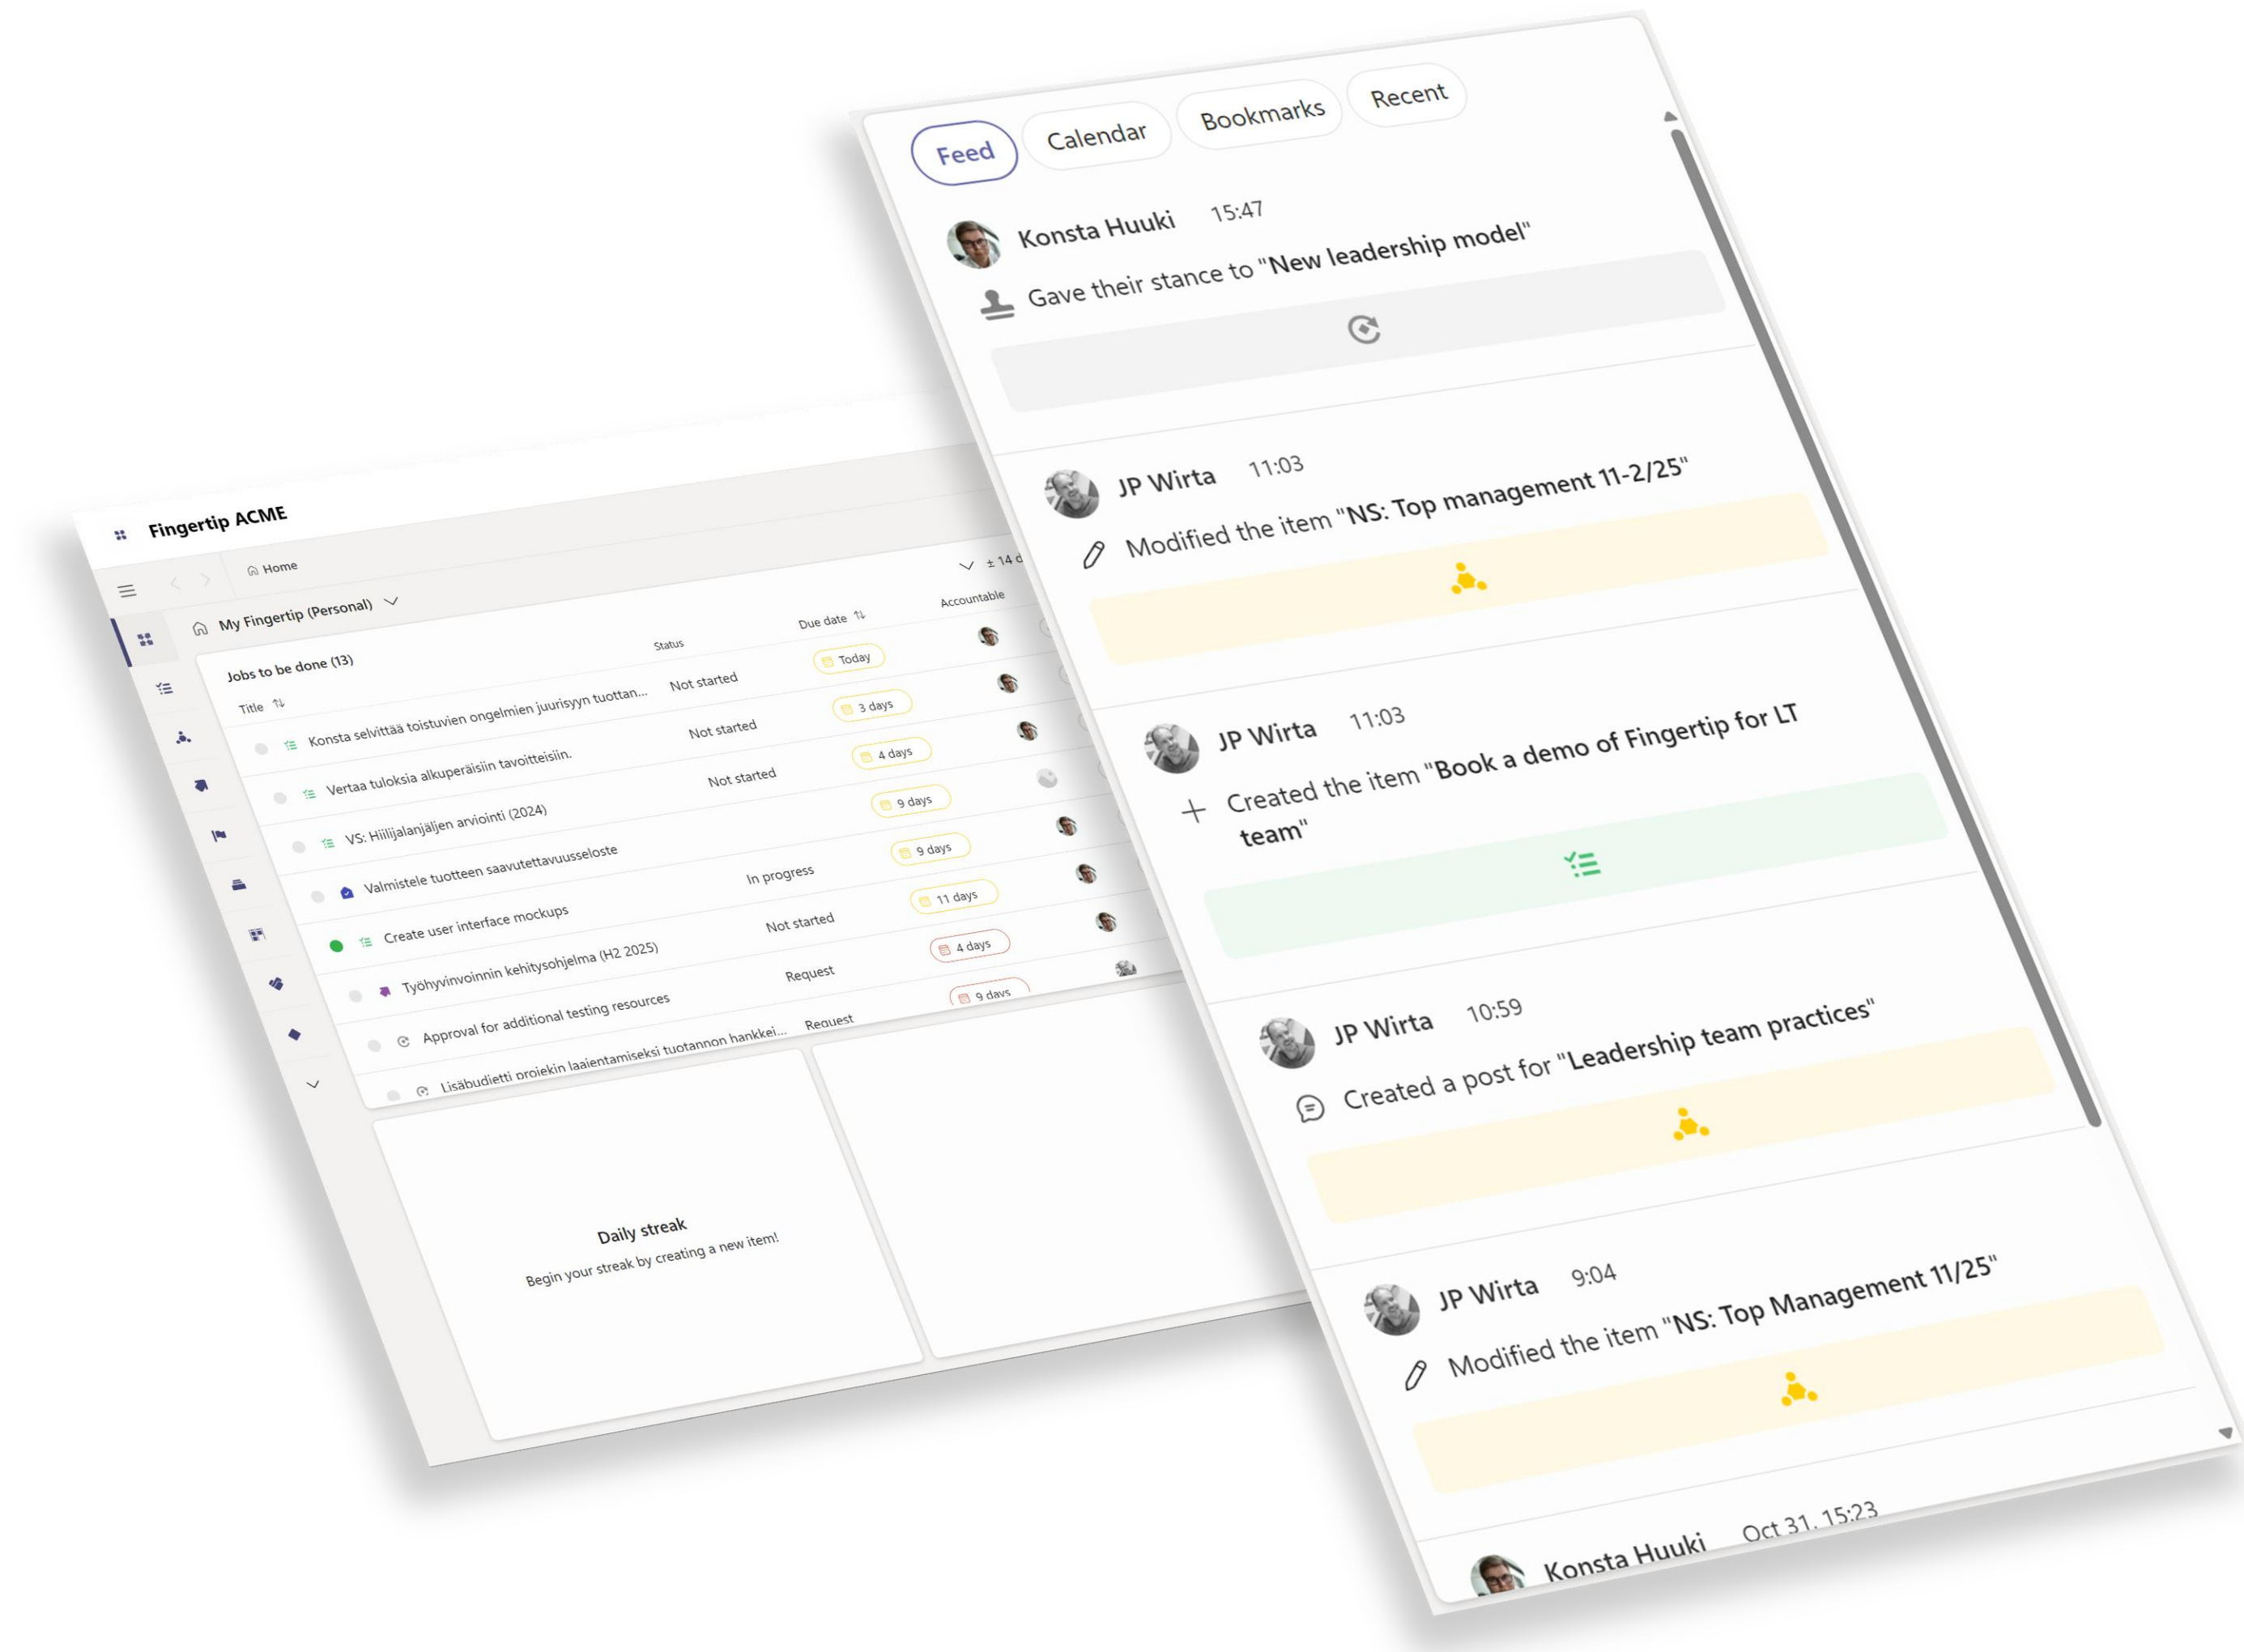

New Feed component loads faster and has minor UX improvements

Fast updates, better experience

The new Feed component, designed for faster loading and enhanced user experience (UX), significantly benefits end users by providing **timely updates without frustrating delays**. With quicker access to content, users can stay informed and engaged, making their interactions more efficient and enjoyable.

Minor UX improvements, such as streamlined navigation and clearer layouts, further enhance usability, allowing users to easily browse through updates and find relevant information.

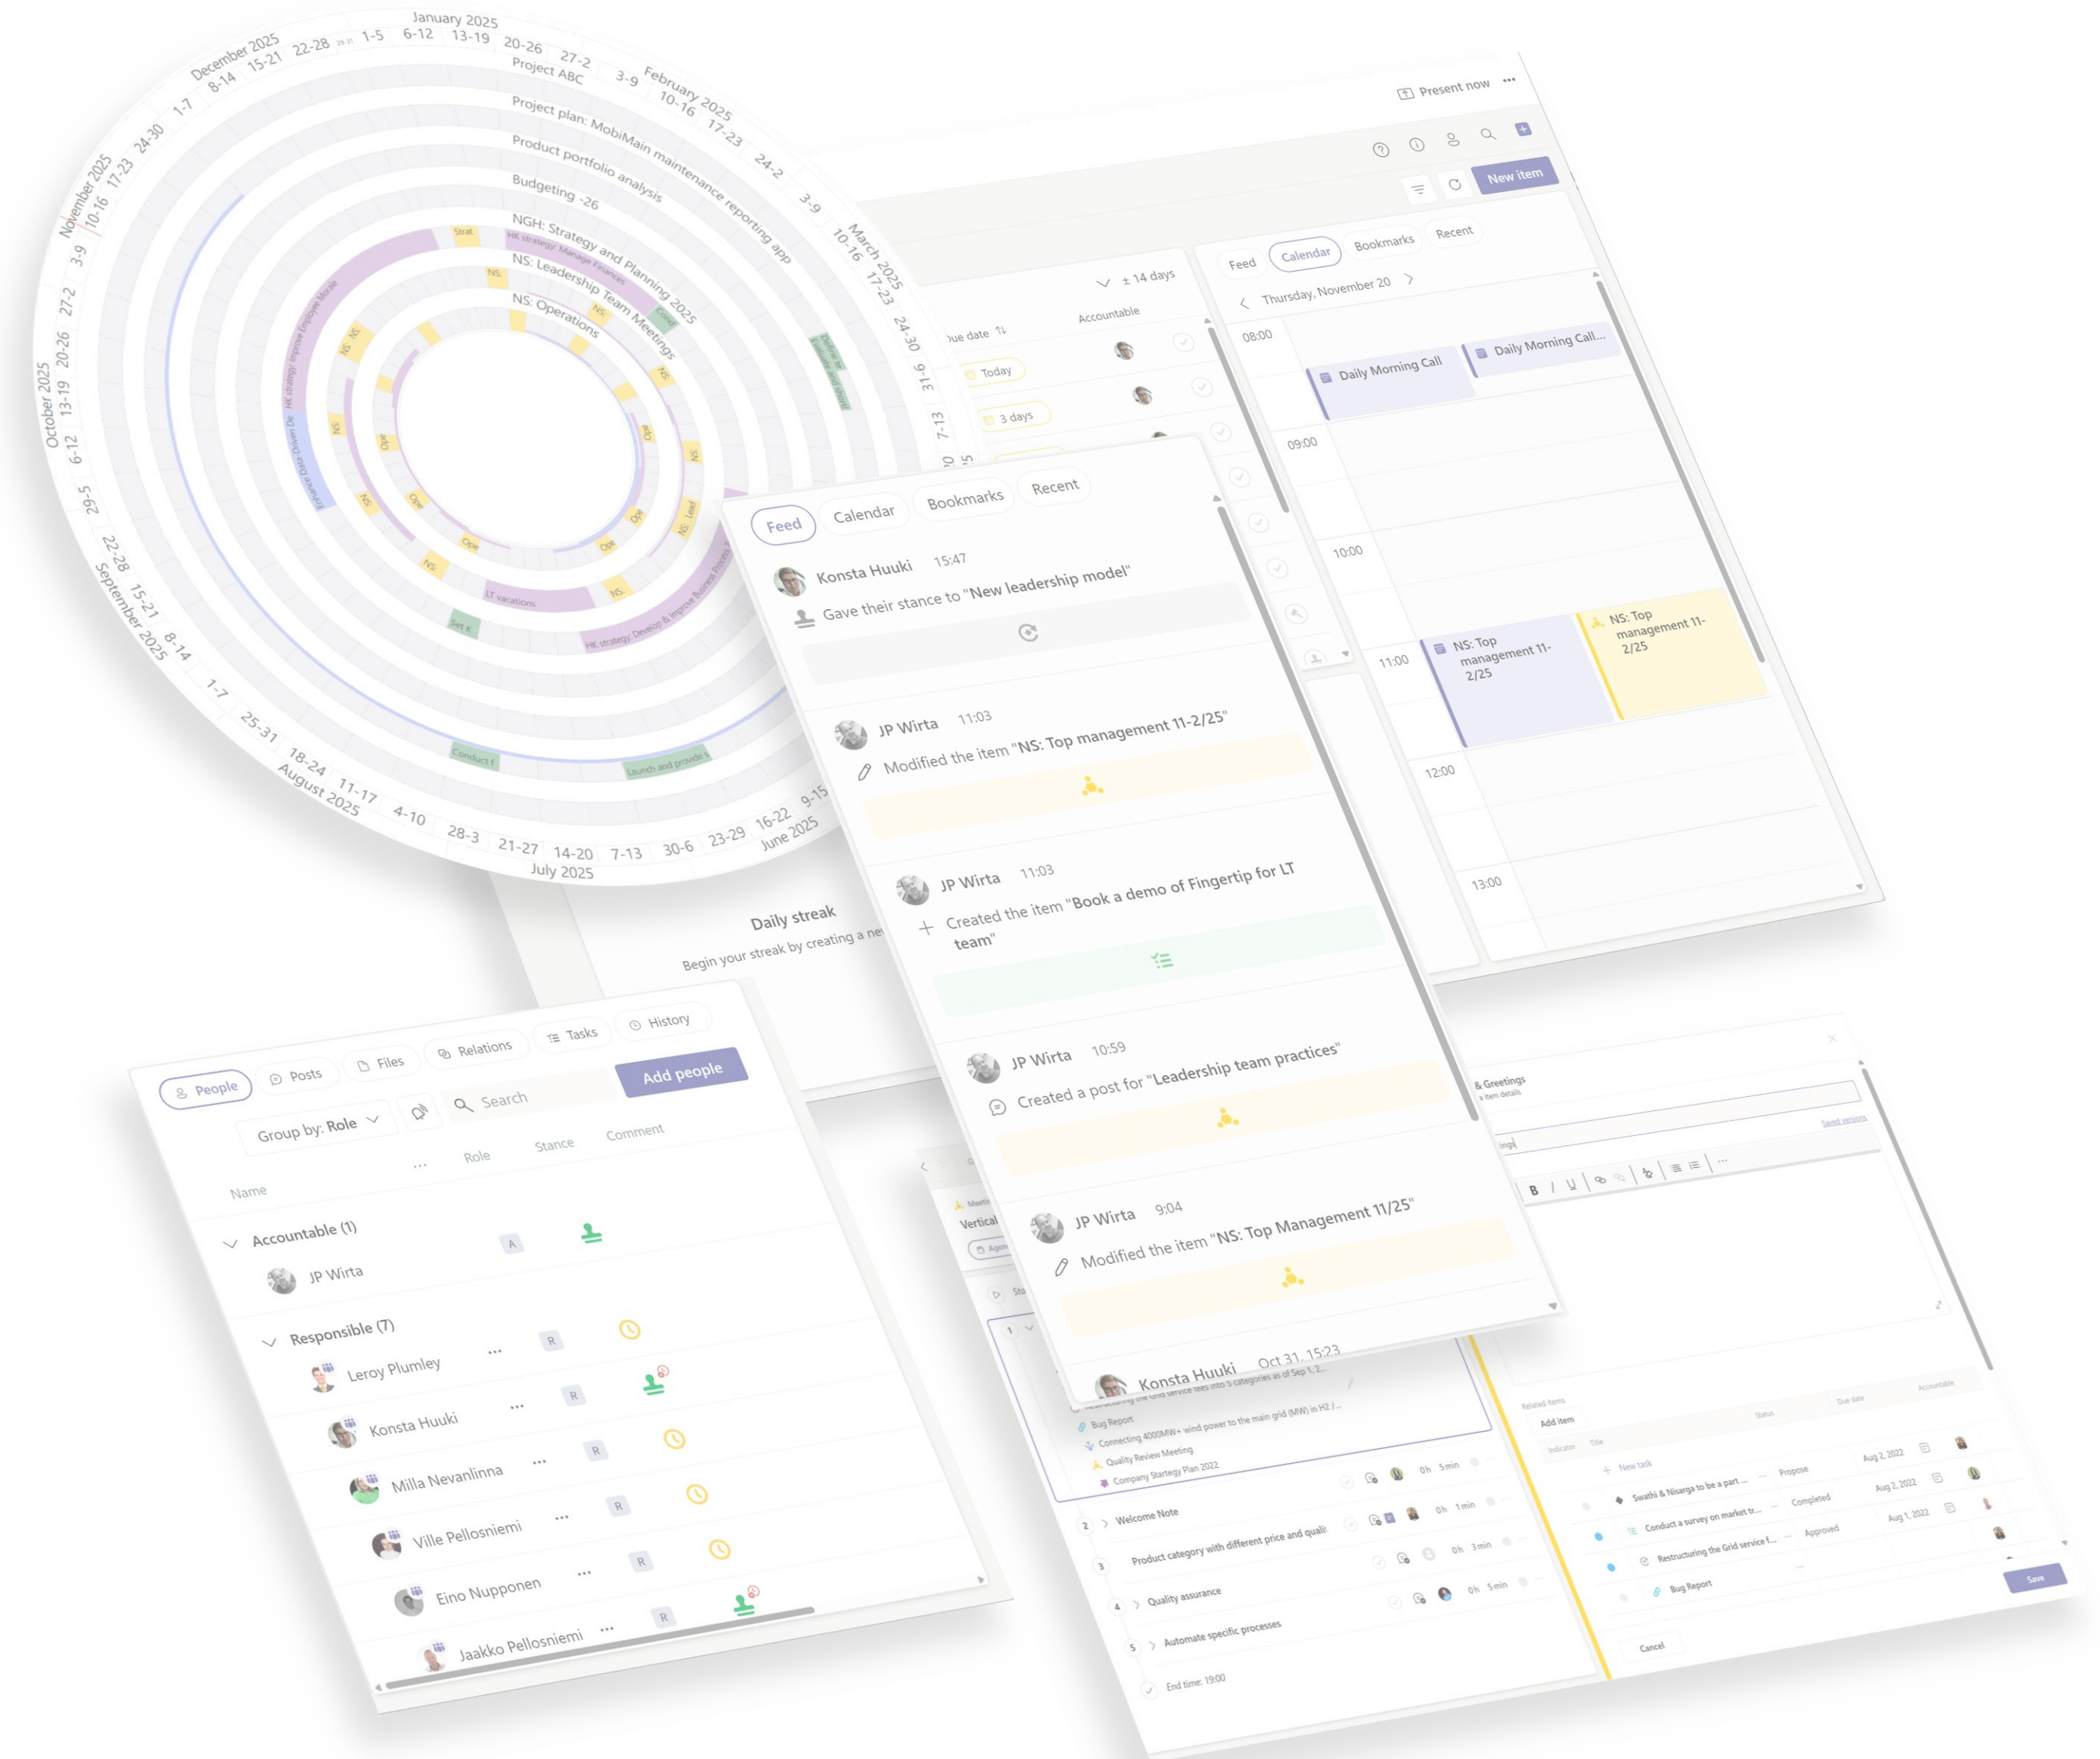

Performance improvements

Fingertip is now faster, smarter, and more responsive!

The recent performance improvements significantly enhance the user experience in several ways. Faster **new item creation** allows users to efficiently add tasks or entries without delays, while **quicker button responses** streamline navigation between screens, making the interface more intuitive. Improved decision list load times ensure that users can access critical information rapidly, facilitating timely decision making.

Additionally, **the optimization of background loading** for unused areas reduces unnecessary resource consumption, contributing to a smoother overall performance.

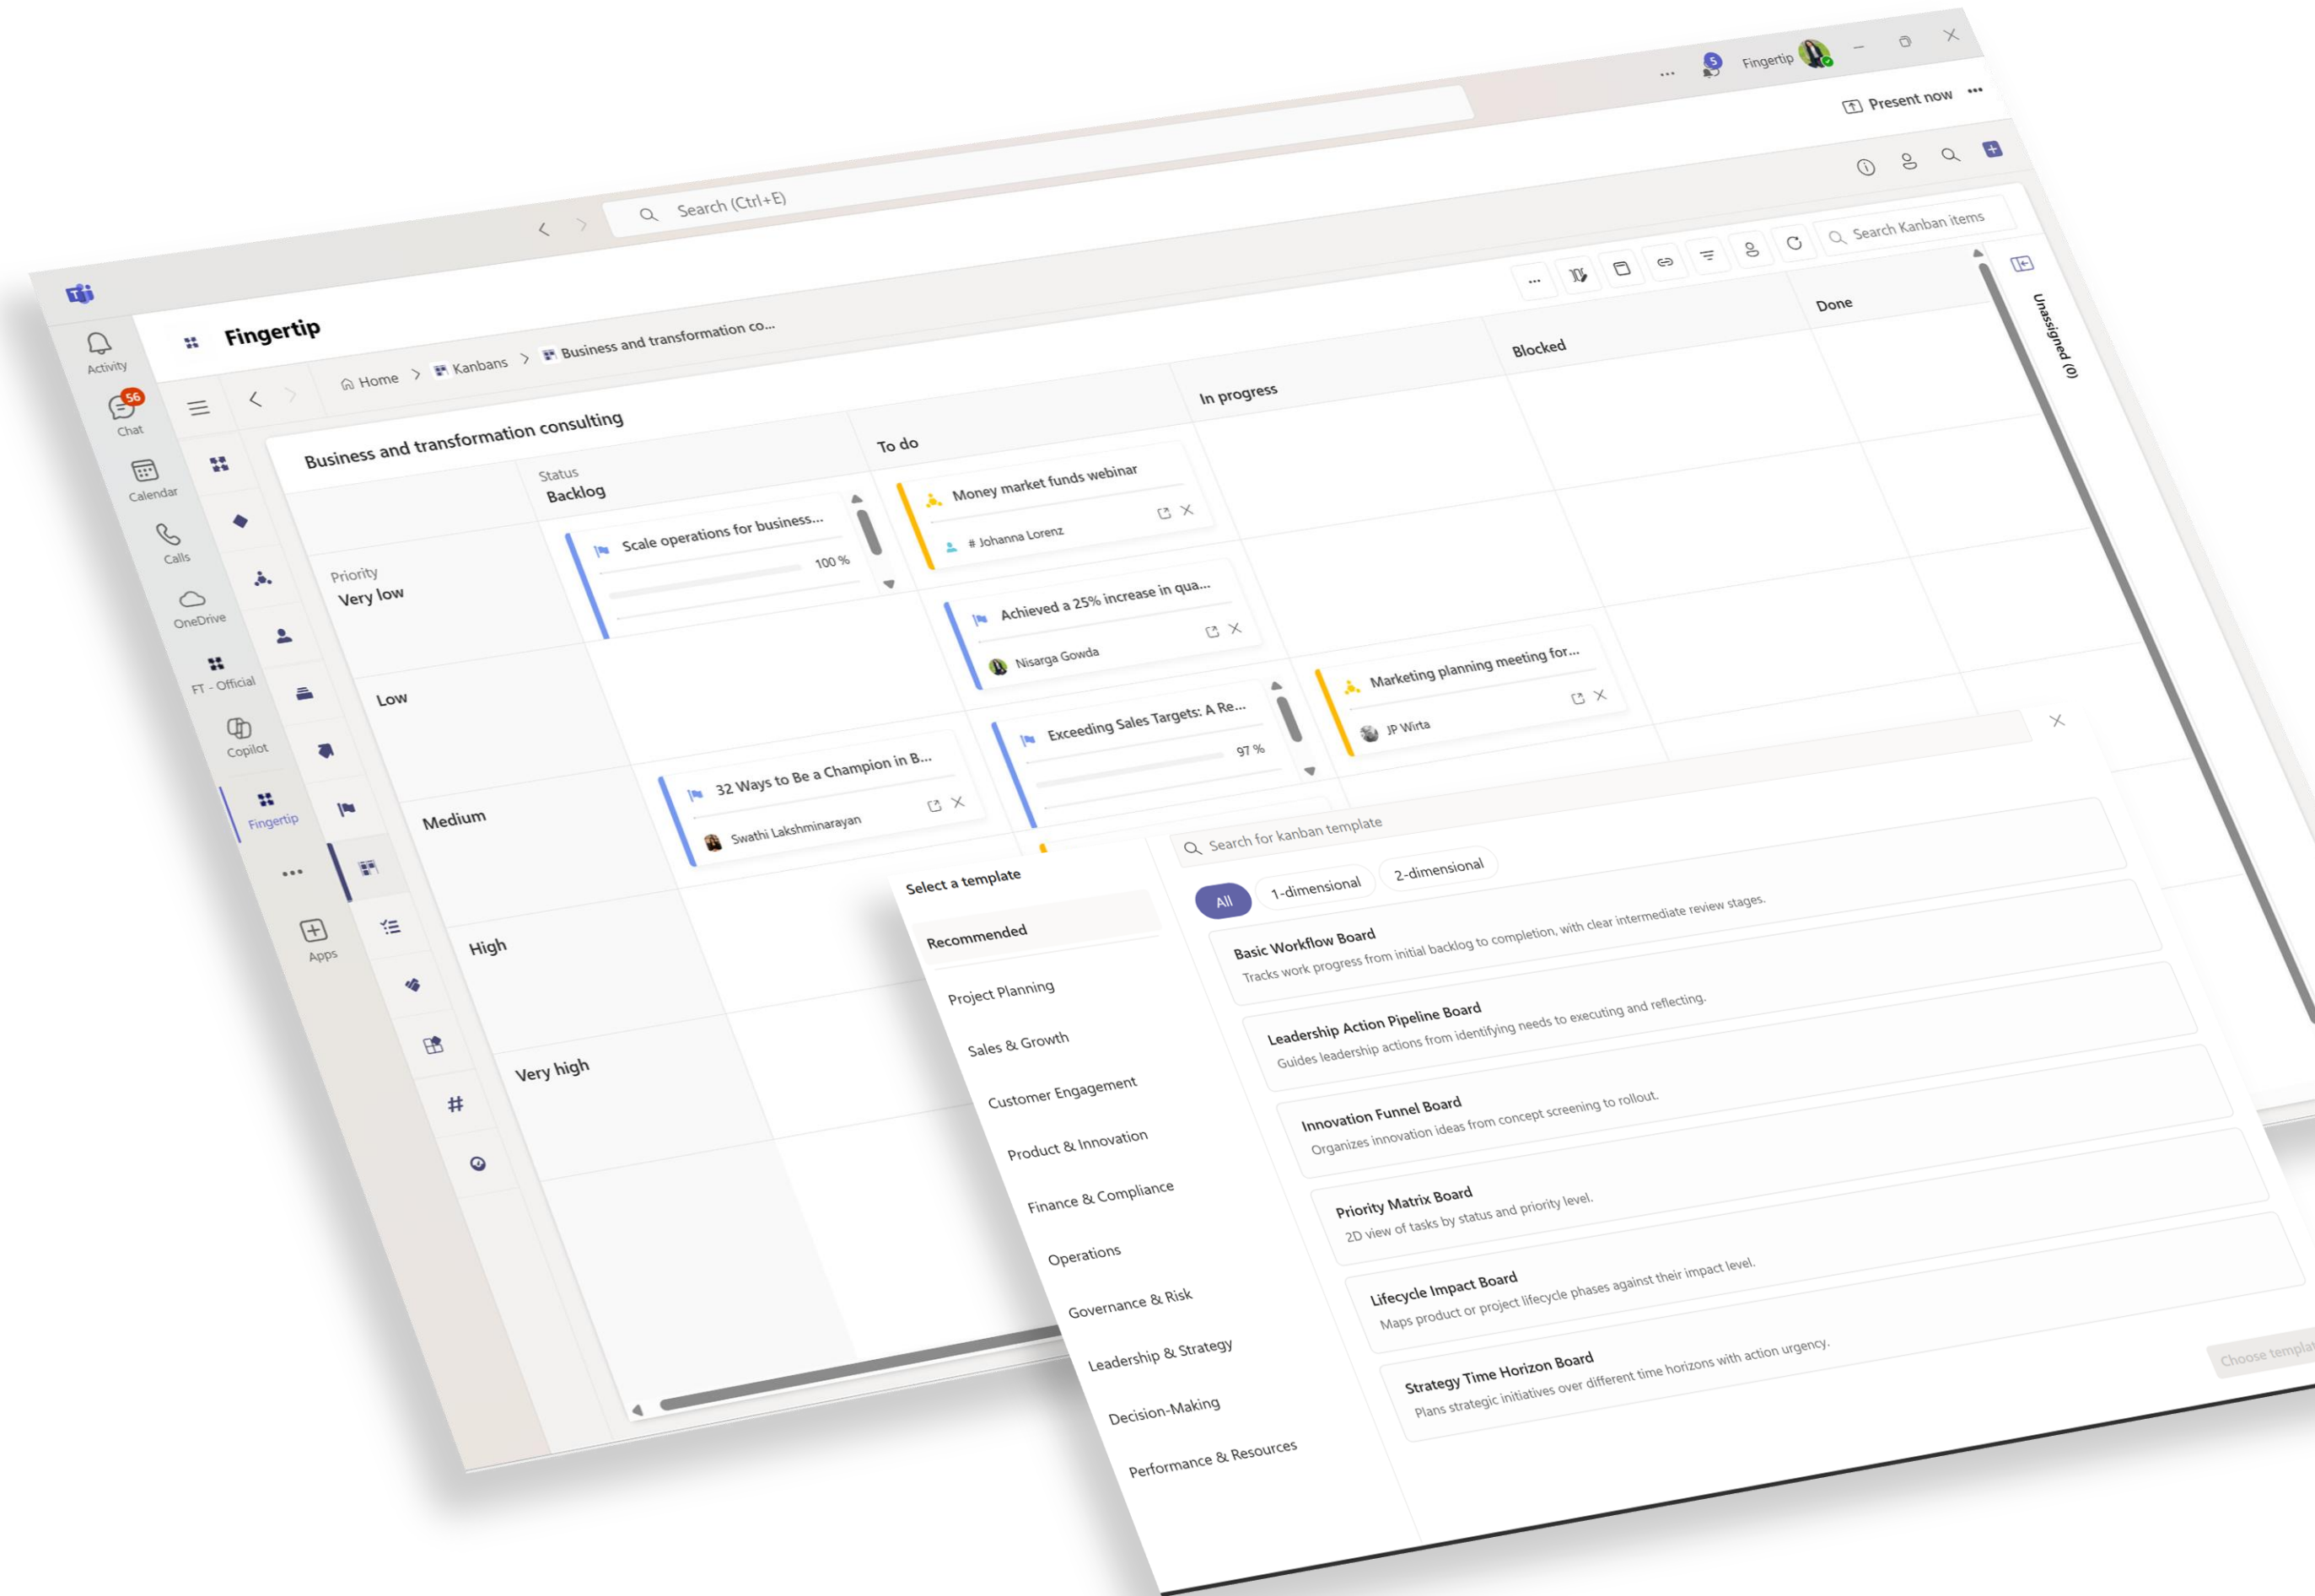

New features in Kanban

Flexibility meets usability

The new features in Kanban enhance user experience by offering increased flexibility and usability. Users can now **select from 20 templates** or create their own. The cards have better readability, while the ability to reorder columns and rows allows for dynamic workflow adjustments. Inline-edit functionality for the Kanban title streamlines management, and various UI/UX improvements make the platform more intuitive.

The new features are:

- Redesigned template selector to choose from 20 templates
- More padding added to cards/cells
- Possibility to reorder columns and rows during and after creation
- Editing Kanban title is now easier with inline-edit functionality
- Some other minor UI / UX improvements

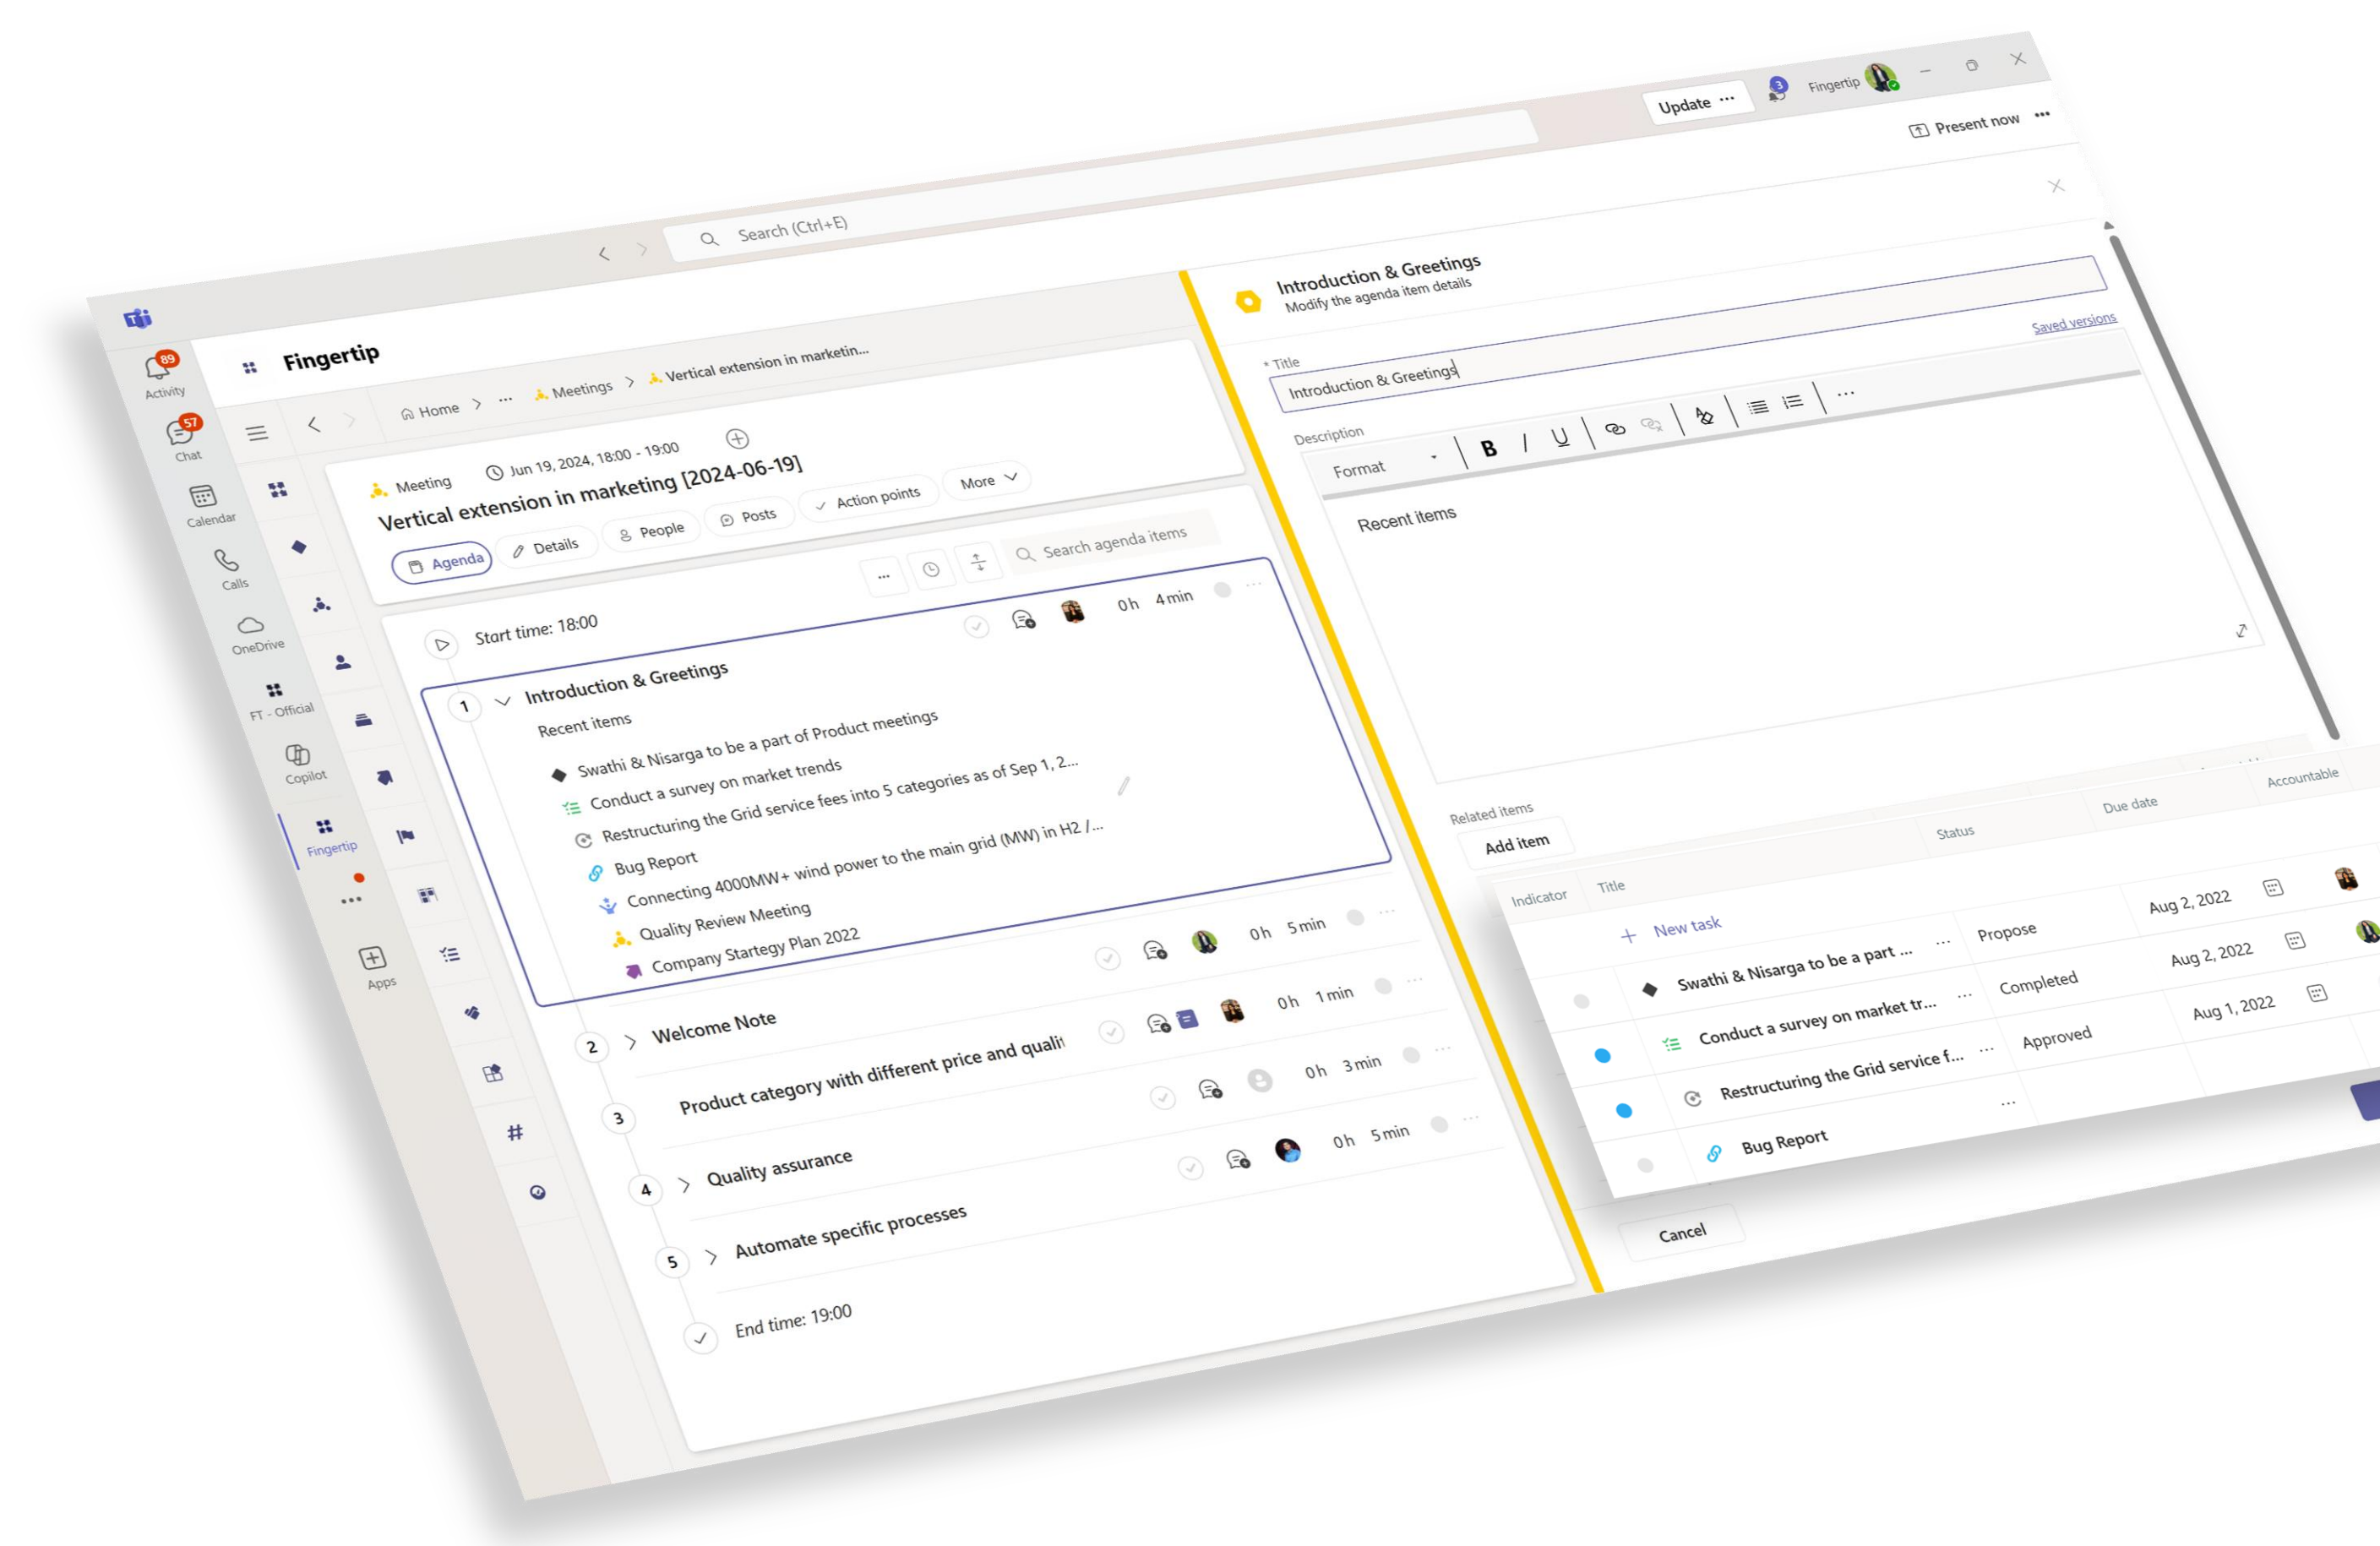

Inline-editable meeting agenda related items list

Edit items on the fly for seamless collaboration!

The implementation of **inline-editable meeting agenda items** in the agenda sidebar greatly enhances user productivity and engagement. Users can quickly modify agenda items related items without navigating away from the main interface, **saving valuable time** during meetings.

This feature allows for real-time updates, ensuring that all participants have access to the most current information. By facilitating immediate changes, it fosters collaboration and encourages contributions from all team members. Overall, this functionality leads to more organized and efficient meetings.
